Change.
A national resource.

We've managed it,
for nearly 100 years.

Change is the lifeblood of any developing economy. For nearly 100 years Shaw Wallace has been involved in the successful management of this national resource. Beginning with such activities as importing piecegoods and distributing petroleum and kerosene, Shaw Wallace today, is a name with many facets: fertilizers, pesticides, liquor and wines, yeast, gelatine; tea, adhesives, shipping, computer services and export of software; home grown R&D and off-shore and on-shore support services for oil exploration. Tomorrow, change will throw up new imperatives. Fresh priorities. And Shaw Wallace will be in the forefront of this process. Because, if change is a resource, we've got the acumen to manage it. And the vision.

Shaw Wallace

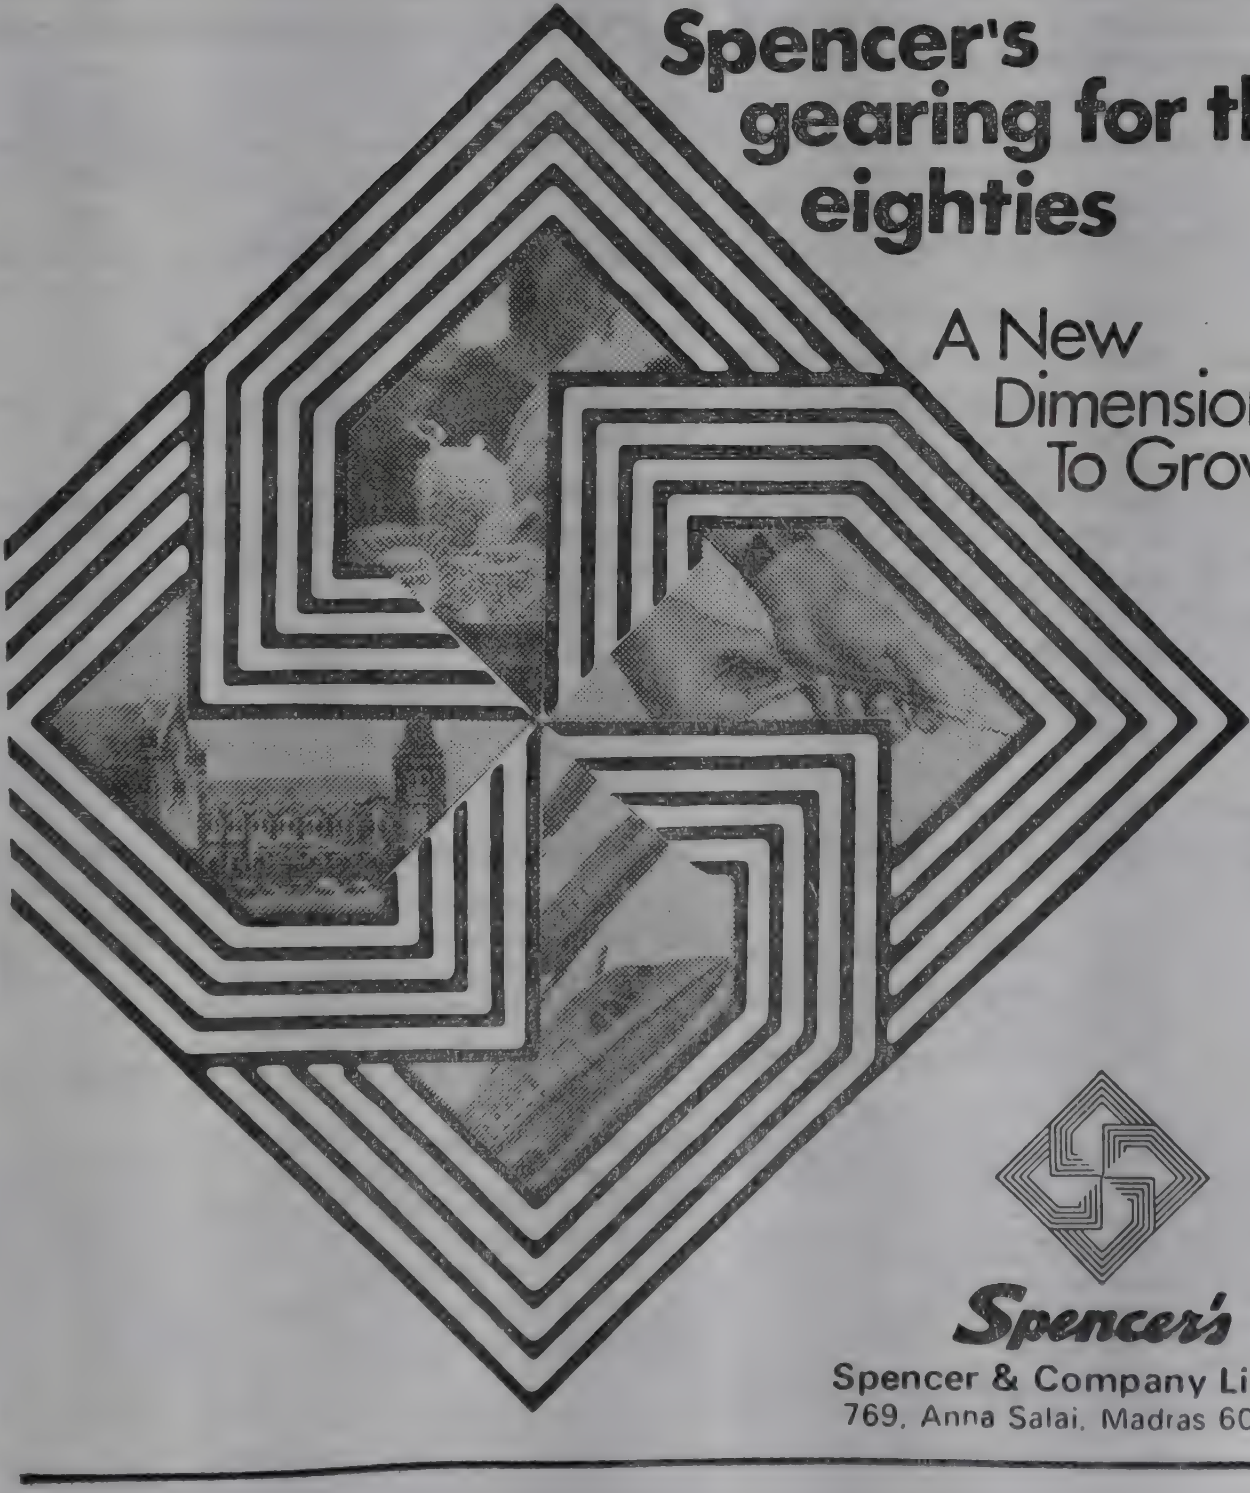
M/s. Spencer International Hotels Ltd., G. F. Kellner & Co., Ltd., Spencer Estates Ltd., Spencer Consumer Products & Services Ltd., Spencer Pharmaceuticals Ltd., Kellner Pharma-

The wide range of Spencer's activity is a known fact, but what is not so well known is that in the recent past Spencer's have expanded the capacity of their manufacturing Units—Pharmaceuticals, Furniture, Electrical Appliances, Tea and Processed Foods.

Spencer's are distributors of some of the best known brands—Parke Davis Specialities, Honeywell Computers, Andhra Pradesh Dairy Products, Mohan Meakin Liquors, and a host of others.

Spencer's also own a chain of luxury Hotels viz. Connemara, Madras, West End, Bangalore and Savoy, Ooty.

Spencer's are poised for a major break through in the eighties—into new areas, confronting new challenges.



Spencer's gearing for the eighties

A New Dimension To Growth

THE STATE TRADING CORPORATION OF INDIA LTD.

The Corporation was set up as a Private Ltd. Company in 1956 and later converted into a Public Ltd. Company in 1959. **Directors :** P. C. Luthar (*Chairman*) P. K. Shungu, S. Jayaraman, A. S. Bhatia, S. V, M. Tripathi and S. K. Agrawal R. R. Gupta, V. C. Pande, Vinay Malik, Dr. Deepak Nayyar, J. S. Baijal **Secretary :** N. M. Samuel. **Registered Office :** Chandralok, 36, Janyath, New Delhi-110 001. **Auditors :** Messrs. S. N. Dhawan & Co.

Objects and Activities: The Corporation helps the development and promotion of exports of commodities on a long term basis, exploring new markets, canalising import of bulk commodities to bridge temporary gaps between supply and demand in commodities essential for the economic and industrial development of the country, internal distribution of any commodity in short supply with a view to stabilising prices and rationalising distribution. The corporation assists small scale industries by giving technical assistance, supply of raw materials and exporting their products. Major export is sugar, castor oil and opium. Steps are taken to export non-canalised manufactured products such as development of new types of fence fittings for the USA market, securing services of a Italian garment designer for designing garments for export, financial assistance scheme for export of frozen shrimps etc. STC has introduced medicinal opium cakes, papaya jam, fresh garlic, dussehri mangoes and jute shopping bags for export. New markets for export include Saudi Arabia for spectacle frames, Austria for shoe uppers, GDR and Netherlands for tobacco, Afghanistan for tarpaulin and dry cell batteries and West Germany for leather ties and silk fabrics. The Corporation has set up three common facility centres in Tamil Nadu, an export oriented shoe upper unit at New Okhla Industrial Development area as a model production centre for shoe uppers, Textile design centre at New Delhi to create new fashion and styles in garments for export. STC also arranges refining and tinning of imported oils and makes it available to State Government for public distribution. Also arranges newsprint imports that help the industry to maintain regular supplies of newspapers to readers, imports crucial drugs in bulk for use by the Indian drug industry. Chemicals imported are used by paint, textile and other industries, scientific journals imported to the scientists for research.

The Corporation has four subsidiaries : (1) The Handicrafts & Handlooms Exports Corporation of India Ltd., (2) Projects and Equipment Corporation of India Ltd., (3) Cashew Corporation of India Ltd. and (4) Central Cottage Industries Corporation of India Ltd., a subsidiary of HHEC.

CAPITAL : Authorised : Rs. 30,00,00,000 in 30,00,000 Equity ehares of Rs. 100 each. **Issued and Subscribed :** Rs. 15,00,00,000 in 15,00,000 Equity shares of Rs. 100 each fully paid-up. (Of these 13,00,000 Equity shares of Rs. 100 each are allotted as fully paid-up by way of Bonus shares by capitalization of General Reserve.)

Date of Accounts : 31st March.

India's best-known trade mark

STC India's premier trading house.

A name that has become synonymous with India's trade with the world. An organisation that is active in international markets—whether India is buying or selling.

STC exports over 300 products to the five continents. From handicrafts to hand tools. From leather to sports goods.

And it imports mass consumption items, to hold the price line at home—Newsprint, edible oils, chemicals.

STC is manned by trade professionals whose expertise has been tried and tested in the world's most demanding markets. Whose knowledge of Indian industry is matched by their awareness of the buyer's needs.

STC.
On the trade routes
of the world.

Ria...

...it's a fresh and beautiful feeling.

Ria
Floral
Ria
Lime

A choice of fragrances
Ria Floral
and Ria Lime

Ria Floral	Ria Lime
Soft and gentle. A delicate pink soap with the subtle fragrance of flowers.	Cool and refreshing. A tingling green soap with the irresistible fragrance of lime.

Ria. The fragrance soaps.

THE YERCAUD COFFEE CURING WORKS LTD.

INCORPORATED in 1948. **Directors :** G. Chakrapani (*Chairman*), S. A. V. R. Krishnan, S. V. Dwarakanathan, C. Padmanabhan, R. Bhakthavatsalam, N. B. Jayakumar, R. Deva, S.P. Padmanabhan, S.V. Ramachandran, Chandrahasa Chetty, S. P. Subramanian. R. Sarveswaran. **Registered Office :** 3/32, Kondappanaicken patty, Kannakurichi Post, Salem-636 008. Telephone : 66389. Telegrams : 'AVITHOM', Salem. **Auditors :** Messrs. Suri & Company.

Objects and Activities : (i) To cure coffee and (ii) To manufacture and market mixed fertilizer. Coffee curing capacity 1,500 tonnes per annum. Manure receiving capacity 3,000 tonnes per annum.

CAPITAL : **Authorised :** Rs. 10,00,000 in 1,00,000 Equity shares of Rs. 10 each. **Issued, Subscribed and Paid-up :** Rs. 5.00,000 in 50,000 Equity shares of Rs. 10 each fully paid-up. (Out of the above, 25,000 shares are allotted as fully paid-up by way of Bonus shares by Capitalisation of Reserves.)

Date of Accounts : 30th June.

YORK INDIA LTD.

INCORPORATED in 1962 at DELHI. **Directors :** J. R. Kline, B. P. Jain (*Co-Chairman*), J. R. Walsh, A. Huntindon and B. L. Nemani. **Factory and Registered Office :** Delhi-Mathura Road, Faridabad (Haryana). Telephone No. : Badarpur 5367-5368-5384. Telex : 4312. Telegrams : 'YORKINDIA'. **Auditors :** Messrs. G. Basu & Company.

Objects and Activities : Manufacturers of refrigeration, air-conditioning, heating, ventilating equipment and cold storage plants for all applications, fans, blowers, heaters, air washers, humidifying apparatus, refrigerating machinery, sugar manufacturing machinery, forgers, machine tool pumps steam and air turbines.

CAPITAL : **Authorised :** Rs. 10,00,000 divided into 1,00,000 shares of Rs. 10 each. **Issued, Subscribed and Paid-up :** Rs. 30,00,000 in 3,00,000 Equity shares of Rs. 10 each.

The company has entered into technical collaboration with Messrs. Borg Warner Corporation.

Date of Accounts : 31st March.

Registration Fees : Rs. 2 per deed. **Fee for Split-up** or **New Certificate :** Re. 1 per certificate.

SIPCOT is even more youthful in the International Youth Year

Setting records after new records, year after year, SIPCOT is on the go—on 'fast track'—to scale new peaks of industrial promotion in Tamil Nadu.

That's because SIPCOT's basic objective is to promote more and more medium & large-scale industries in Tamil Nadu.
With ever-new zeal and youthful vigour, SIPCOT keeps setting ever-new records.

HERE, LOOK AT SIPCOT'S PERFORMANCE IN THE LAST 3 YEARS:

	1982-83	83-84	84-85
	(Rs. IN LAKHS)		
Total Term Loans sanctioned	3036.91	3848.95	4638.45
Total Central Subsidies arranged	663.41	296.26	319.96
Total State Subsidies sanctioned	65.21	183.11	341.87
IDBI Seed Capital Assistance arranged	69.07	86.20	184.40

And in 1985-86, you can be sure SIPCOT will perform even better. Because SIPCOT has so much to offer.

TREASURE OF INCENTIVES:

- Term loans up to Rs. 90 lakhs.
- Seed Capital Assistance for technocrats and professionals.
- Central or State govt. subsidy—up to Rs.15 lakhs.
- Equity participation and underwriting up to 25% of equity capital.
- Interest Free Sales Tax Loan up to Rs. 100 lakhs with long moratoria.
- Special Subsidy for selected categories of industries—up to Rs. 10 lakhs.
- Subsidy for feasibility studies—up to 50% of the cost of the study.
- Developed plots in SIPCOT's Industrial Complexes.
- Assured power for an initial period of 5 years in SIPCOT's complexes.
- Power tariff and water royalty concessions.
- Single Window Agency for speedier clearances
- Concessional financial assistance for modernisation of Industries.
- Project profiles and guidance for entrepreneurs.
- Special concession to SC/ST entrepreneurs.

BUT THAT'S NOT THE WHOLE STORY:

SIPCOT also does much more. For instance—

- Extending special incentives, concessions and assistance to NRI investors, in addition to the incentives provided by the Govt. of India.
- Acting as the Nodal Agency of Madras Export Processing Zone to help it take off as a Prime FTZ.
- AND DOING EVERYTHING MORE SPEEDILY—FROM ALPHA TO OMEGA—WITHIN A TIME-FRAME SET BY TAMIL NADU'S SINGLE WINDOW AGENCY.

Why not come to SIPCOT? That's where the (faster) action is!

Just 7 minutes

LIC's wait reduction plan: It'll shed a load off your time.

Some time ago a small cell in LIC started working on ways to better our customer service. A systematic reorganisation of all our offices was planned.

We tried it out as a pilot project in three divisions. We reviewed the results. They were spectacular.

In one division, the time taken for issuing new policy bonds had gone down: from an average 35 days to 10 days.

The time taken for granting loans had been cut from an average 12 days to just 3.

The waiting period at the cash counter had also been sharply reduced, from 35 minutes on an average to a mere 7.

The percentage of outstanding claims had been brought down from an average 13% to 8%.

Thus encouraged, we are implementing the reorganisation plan in 41 divisions out of our total 43 on a progressive basis. Bombay and Calcutta divisions will have separate reorganisation plans.

LIC celebrates its 29th anniversary this year with greater confidence in its ability to offer satisfactory customer service.

Peoples welfare our primary goal.

PAPER INDUSTRY

TH paper industry encompassing pulp, paper, pper-board and newsprint is one of the inustries of basic importance to the country. Before e advent of modern machine-made paper industrn India, the country boasted of a thriving hand-mde paper industry which was first introduced India in the 18th century by the Mughals. The pruction of machine-made paper, made a beginng in 1870, when the Bally Mills was establid near Calcutta.

Theper industry in India is largely in the privatector. Public sector entered the field of paper l pulp indstry in 1970 with the formation of thHindustan Paper Corporation Ltd., althou it had been in the field of newsprint produn since 1958. In 1950-51, when the countmbarked on its planned programme of develcent, the capacity for paper and paper-boardoduction was 1.36 lakh tonnes in 17 manuuring units. Since then, this industry has re rapid progress and today, there are 222 p mills in the country with a total annual instal capacity of 20.72 lakh tonnes. The Planr Commission has envisaged a total of 20.05h tonnes capacity build-up by the end of thth Plan period. According to the present recka, installed capacity is likely to exceed the ptarget by 5,00,000 tonnes at the end of 1984

Thlowing table indicates the trend in the deveent of paper and paper-board industry in Ir

TABLE 1

Trends in the development of Paper and Paper-board industry in India

Source : Commerce, Aug. 1981 and RBI Report on Currency and Finance, 1982-83. Vol. I.

While the installed capacity had steadily grown over the years, the production of paper and paper-board, had gone down, with nearly 45 per cent of the total installed capacity not operating on a viable basis. The total output of paper and, paper-board during 1982-83 remained stagnant at 12.18 lakh tonnes as against an increase of 10.3 per cent in the preceding year. The demand, production and installed capacity of paper and paper-boards by 1984-85 have been estimated at 15.4 lakh tonnes, 15.00 lakh tonnes and 20.5 tonnes respectively.

Demand and Capacity Utilisation

The demand for paper pervades all sectors of activity. Paper is the basic medium of communication and dissemination of information and also provides the basic requirements in packing and building. Paper products are invading many markets formerly held by wood products. Extensive use is being made of corrugated paper boards for packaging. With the expansion of educational facilities, the demand for cultural paper has been steadily increasing. The demand for paper also comes from electrical equipment and electronic component industries which need electrical insulation paper.

The consumption of paper is an index of the level of civilization and culture of a country. The per capita consumption of paper in India which is a mere 2 kg per year is about the lowest in the world. Even for this meagre consumption, there has been an imbalance between demand and supply. It is estimated that at the turn of the Century the country should have an installed capacity of 42.5 lakh tonnes, basing the calculation on a per-capita consumption of 4.5 kg and estimated increase in population to 946 million. As the present installed capacity is 202 lakh tonnes, another 22 lakh tonnes of capacity have to be created to achieve this target. By 2000 A.D., the industry is expected to achieve production target of 36 lakh tonnes on the basis of 80 per cent capacity utilisation. The following tables indicate the projected consumption of paper in India and also the per capita consumption of various categories of paper and pulp.

TABLE 2

Projected Consumption of Paper in India (per annum)

(in '000 tonnes)

Planning period	Mid year	Kraft	News	Printing and writing paper	Corru-gating medium	Paper boards	Tot
1986-90 ..	88	1,100	420	1,000	880	220	3,62
1991-95 ..	93	1,330	650	1,250	1,060	270	4,56
1996-2000 ..	98	1,650	800	1,500	1,320	330	5,60

Total ..	1.67	2.41	2.74	2.80	3.57	3.76	8.38

Source : Capital, July 25, 1983.

The paper and paper-board industry had an enviable record of capacity utilisation till 1970, but thereafter there has been a steady decline as is evident from Table 1. The capacity utilisation has continuously declined from 66.6 per cent in 1980-81 to 64.9 per cent in 1981-82 and further to 58.8 per cent in 1982-83. The promulgation of the Paper Control Order in 1978, subsequent amendments to it and the price control on white printing paper, together with a steep increase in excise duty, have all contributed to the failure in achieving higher production of paper and paper-board. The Paper Control Order of 1978, regulated the production to the extent of 30 per cent of the capacity of each unit for white and printing paper, 20 per cent for creamwove laid paper and 13 per cent for board and other varieties of speciality paper. The remaining 37 per cent was exempted from the purview of the production control order. Hence the control order enabled the Government to exercise as much as 65 per cent control over the industry's output. The mills were also bound to sell the entire 30 per cent of the white printing paper to official agencies at a stipulated price which was much lower than the actual cost of production. This uniform percentage of control on production irrespective of costs of production and financial position proved to be counter-productive and resulted in the erosion of the financial position of paper mills. Presently, the paper industry is passing through a crisis. In 1983, as many as 7 large and 23 small paper mills were not in operation either during part or whole of the year. These units are operating at merely 58 per cent of the capacity with many more units facing sickness or threats of closure. The declining rate of capacity utilisation in paper industry is mainly due to sharp increase in the end product prices following the rise in input costs, failure of infrastructural facilities, lack of availability of forest raw materials in adequate quantities and at reasonable rates, supply of poor quality of coal and also the extreme difficulties faced by the industry in the procurement of rosin. The availability of waste paper is becoming extremely difficult and the cost of pulpable grade of waste paper have gone up by almost 100 per cent in the indigenous market. Even the imported waste paper has become more costly due to increase in freights as well as large recycling of waste-papers undertaken by the exporting countries themselves. The lack of economic volume of production also disallowed the industry to absorb the highcosts. The small and medium paper mills with 1,500 to 16,500 tonnes annual capacity are based on decades-old technology leading to ineffective costs. Since this industry is highly capital-intensive, productive capabilities need to be restored with technical modernisation and up-gradation.

Raw Materials

Paper is made out of a number of scarce resources such as forest produce, water, chemicals, coal, etc. In the Sixties, the paper and pulp industry used to have cheap supply of energy and also plentiful supply of other raw materials, resulting in no pressure so far as basic inputs were concerned. But the situation is very different today. The paper industry finds itself saddled with an acute shortage of raw materials, particularly pulpable wood, combined with a static technology of production.

Bamboo and pulpable timber continue to be the basic raw materials for paper industry. Forests in India occupy 75 million hectares, which is nearly 24 per cent of the total land area of the country. This is much below the minimum reqirement of forest cover, which is around 33 per cent. The yield per hectare in Indian forests is also one of the lowest in the world. The total growth area under bamboo is over 1 lakh sq. km. with an annual potential of 50 lakh tonnes. Their growth is concentrated mainly in M.P., Orissa, A.P., Karnataka and the North-Eastern States. The availability of bamboo is getting scarce day by day due to deforestation and lack of adequate planning.

The Expert Committee constituted by the Development Council for Paper Industry has calculated that the industry would need around 81.5 lakh tonnes of pulpable wood per annum by 2,000 A.D. This calls for fresh plantation of pulpable wood over an area of 16.4 lakh hectares in the next eight years. To augment the diminishing pulpwood it becomes imperative to create an additional resource base in the form of close spaced plantations of fast growing species with optimum fibre content, located within economic distance of the mills. The Government in consultation with the industry should evolve a rational development and exploitation of forest policy, exploit lands by silviculture operations including afforestation, prevention of unauthorised felling of trees and promotion of socio-industrial forestry programmes in joint sector.

In order to conserve the dwindling bamboo and and timber resources, the paper industry will have to consider utilising other alternative sources of raw material. The fibrous materials available for paper making from agricultural resources comprise mainly of bagasse, wheat and rice straw, jute sticks and certain other unconventional grasses. Of these, bagasse has the largest potential for use in paper manufacturing.

India has over 261 major sugar mills providing around 46 lakh tonnes of bagasse on bone-dry basis every year. The use of bagasse as raw material for paper-making has become imperative to save our forestwealth and to make better use of this commodity which also goes waste. The bagasse obtained by gur makers is burnt in their hearths and ovens while that of sugar mills are burnt in the boilers.

The Union Government, having recognised the importance of this raw material, has announced a cent per cent excise duty relief on paper manufactured by using 75 per cent of bagasse. But this incentive had not yielded the desired result as the sugar mills retain the same quantity of fuel for firing the boilers. If the paper manufacturing units could help the sugar mills to convert their boilers from bagasse fired to coal fired, the bagasse thus saved could be spared for use in the manufacture of paper. Ample quantities of coal should be made available to these sugar mills in time, as coal shortage and transportation bottlenecks preclude the possibility of switching over to coal-fired boilers.

India produces around 150 million tonnes of wheat and rice straw. Straw with other pulpable fibres could be used as a furnish. Waste paper is another secondary source of raw material. Around 38 per cent of paper supply in Japan, 31 per cent in West Germany and 20 per cent in the USA is from recycled paper waste, whereas in India it is only 5 per cent. Hence, there are great possibilities in this source of raw material for the paper industry. The College of Engineering affiliated to the Tamil Nadu Agricultural University, Coimbatore, has also succeeded in extracting paper pulp from jawar chaff, cotton stalk, maize cobs, sunflower stalk, mature bajra stalk, banana pseudostem and sheath as also from papaya stem.

Newsprint

There are at present 3 units producing newsprint with a total installed capacity of 2,30,000 tonnes. Till 1981-82, the National Newsprint and Paper Mills (NEPA) was the only newsprint unit in the country with a capacity of 75,000 tonnes. The Mysore Paper Mills, with a capacity of 75,000 tonnes of newsprint was commissioned in 1981 and this was followed by the Kerala Newsprint project at Vellore, with an installed capacity of 80,000 tonnes per annum. The current production of newsprint in the country is around 1.75 lakh tonnes against the actual requirement of 3.5 lakh tonnes. Though indigenous production has been going up steadily over the years, more than 50 per cent of the domestic requirements are still imported. Thus, newsprint worth about Rs. 150 crores have to be imported every year. With the stabilisation in the production of the two major paper mills viz., the Kerala Newsprint Mill and the Mysore Paper Mill,the newsprint production in the country is expected to exceed 2 lakh tonnes by the end of the Sixth Plan period.

Falling in line with the Union Government's policy of encouraging the use of agriculture-based raw materials for paper production, the newsprint plant being set up by the State owned Tamil Nadu Newsprint and Paper Limited at Pugalur in Tiruchi District, is to be based on bagasse as raw material for newsprint manufacture. The World Bank has provided $ 100 millions (Rs. 107 crores) assistance for this Rs. 200 crore paper plant. It is for the first time in the World that a giant project is being established by employing the new technology for making newsprint out of bagasse. Though Mexico and Cuba have already utilised this technology for making newsprint out of bagasse, their production has been in much smaller volume. The Tamil Nadu project is expected to go on stream by September 1984 and the successful operation of this plant, will depend on the prospects of bagasse being used widely in the manufacture of newsprint in the country. The details pertaining to the newsprint projects in India and the installed capacity, production and capacity utilisation of the newsprint industry are given in the following tables :

TABLE 4

Details of Paper Mills in India producing Newsprint

Name	Annual Capacity (in tonnes)	Location
National Newsprint Paper Mills Ltd. (NEPA)	75,000	Nepanagar (M.P.)
Hindustan Paper Corporation	80,000	Vellore, Ernakulam, Kerala
Mysore Paper Mills Ltd.	75,000	Bhadravati, Shimoga, Dist. Karnataka
Tamil Nadu Newsprint and Paper Ltd. *	50,000	Pugalur, Trichy, Dist. Tamil Nadu.

* Under implementation. *Source* : Capital, July 25, 1983.

TABLE 5

Installed Capacity, Production and Capacity Utilisation of Newsprint Units in India during 1981-83

Year	No. of Units	Installed Capacity (tonnes)	Production	Capacity utilisation rates (per cent)
1980-81	1	75,000	51.000 (+ 6.3)	68.3
1981-82	2	1,50,000	55,000 (+ 7.8)	36.8
1982-83 (provisional)	3	2,30,000	117,000 (+ 112.7)	57.0

Note : Figure in brackets indicate percentage variations over the preceding year.

Government policy on Newsprint and Paper

Both newsprint and paper are subject to statutory price controls. During 1982-83, the Union Government amended the existing Paper (Regulation of Production) Control Order of 1978. As per this amended order, the price of white printing paper has been revised from Rs. 4200 per tonne to Rs. 5,400 per tonne, an increase of Rs. 1,200 or 37.5 per cent in the ex-factory price of white printing paper. Under the same amended order, the obligation on manufacturers to produce 30 per cent of white printing paper has been dispensed with and in its place, a new scheme has been introduced. As per this new scheme, a manufacturer whose installed capacity (by way of a new unit of substantial expansion) has been commissioned on or after January 1, 1976 but has not completed five years from the date of such commissioning or is to be commissioned on or after the commencement of the amended order of 1983, is required to produce white printing paper to the extent of 5 per cent in the first year, 10 per cent in the second year, 15 per cent in the third year, 20 per cent in the fourth year and 25 per cent in the fifth and subsequent years.

Paper is an extremely capital-intensive industry. As such, the existing Paper Control Order is a deterrence so far as the new investment is concerned. The cost of new investment in paper industry is Rs. 24,000 per annual tonne. Based on this, the cost of production would amount to Rs. 9,000 per tonne. Taking into account the exemption from the production of white printing paper and 50 per cent excise duty concession, the average sales realisation per tonne of paper for a new paper mill will be Rs. 8145 as against the production cost of Rs. 9000. Hence the fiscal incentives so far made available by the Government in terms of the excise notification offering 50 per cent excise duty exemption is far too inadequate to match the needs. As there is a limitation to increase the selling price of paper, the only alternative to make the operations in the paper industry viable is to give financial support by way of tangible incentives which would make investments worthwhile and the industry financially stable.

The unrealistic increase in the rates of excise duty on paper and paper-board, has further aggravated the situation in the paper industry.

The revised rates and the change in the basis of charging excise duty from *ad valorem* to *ad valorem-cum specific rates* have led to a hike in excise incidence by about Rs. 550 per tonne and also a corresponding increase in sales tax to the extent of Rs. 50 per tonne on an average.

In addition to the above, the industry had to incur a cost overrun to the tune of Rs. 500 per tonne due to various Governmental actions viz., increase in railway freight charges, hike in royalty rates, increase in prices of petroleum products, etc. Consequently, paper has become dearer to the consuming public by Rs. 1,100 per tonne. Since most of the basic inputs and utilities such as raw materials, power and fuel, coal, transport are under the Government control at present, nearly 70 per cent of the cost of the paper mills accounting for these inputs and utilities are directly controlled by the Government or through its agencies. Continuous increase in costs with limited possibility of recovering the same from the market through increased prices have led to the closure of a number of units and placed many more on the verge of sickness. The operating profitability of this industry has dropped drastically to 6.4 per cent from a high of 20 per cent in 1975-76. At present various government imports and levies account for about 40 per cent of the effective price of paper. The revised control order also requires the paper industry to supply 25 per cent of its total production of white printing paper at a concessional price much below the present cost of production.

Since paper is an essential commodity, it is imperative that Governmental imposts and levies on this item of mass consumption should be substantially reduced to keep it not only within the easy reach of the consuming public but also to stimulate demand and achieve higher capacity utilisation. In order to ensure the development of the paper industry on a sustained basis, it is essential that a realistic and static price policy should be evolved.

AMARAVATHI SRI VENKATESA PAPER MILLS LTD.

INCORPORATED in 1960. **Directors :** V. Genguswamy (*Managing Director*), R. Chakravarthi, A. G. Subburaman, M.P., P. Veluswamy Naidu, V. Sama Naidu, Smt. G. Rajalakshmi, P. Siva (*Nominee* of State Industries Promotion Corporation of Tamil Nadu Ltd.) S. Rajappa (*Nominee* of Tamil Nadu Indutrial Investment Corportion Limited). **Secretary :** M. C. Selvarajan. **Registered Office :** Venkata Nilayam, Off, Palani Road, Venkatesa Mills, Post-642 128, Udamalpet. Telephone : 861. **Administrative Office :** Palani Road, Madathukulam-642 113. Telephone : 406, 407 & 408. Telegram : 'PAPER'. **Auditors :** Messrs. M. S. Jagannathan & Visvanathan.

Objects and Activities : Manufacturers of all types of printing and writing paper.

Licensed/Installed Capacity—8000 M. tonnes per annum. The company has added some balancing equipments to increase the capacity to 10,000 tonnes per annum.

The factory is situated at Palani Road, Madathukulam-642 113.

CAPITAL : Authorised : Rs. 50,00,000 in 50,000 Equity shares of Rs. 100 each. **Paid-up :** Rs. 27,42,200 in 27,422 Equity shares of Rs. 100 each.

Date of Accounts : 30th June.

Dividend declared : 1982—10 per cent, 1981—15 per cent.

ASHOK PAPER MILLS LTD.

(A Joint Venture of the Government of Assam & Bihar)

INCORPORATED in 1957. **Directors :** N. Basu, B. K. Barooah, Dr. R. L. Bhargava, H. C. Bora, L. Dayal, D. N. Jha, I. J. Laul, F. R. Polack, S. Rajkhowa, B. L. Sharma, M. Sinha, M. L. Zutshi and A.D. Adhikari (*Managing Director*). **Secretary :** C. D. Singh. **Registered Office :** 8, Russell Street, Calcutta-700 071. Telegrams : 'ASHOK PAPER'. Telephones : 21-3322. **Auditors :** Messrs. G. Chatterjee & Company.

Objects and Activities : The company manufactures pulp, writing and printing paper, caustic soda and chlorine.

The company has technical collaboration with Messrs. Societe De Gestion D'Etudes Ltd. France and with Messrs. Friedrich Uhde GmbH Germany.

CAPITAL : Authorised : Rs. 10,00,00,000 in 6,00,00,000 Equity shares of Rs. 1.50 each, 70,000—9.3 per cent Cumulative Redeemable Preference shares of Rs. 100 each and 30,000—9.5 per cent Cumulative Redeemable Preference shares of Rs. 100 each. **Paid up :** Rs. 5,03,39,747 in 27,680—9.3 per cent Cumulative Redeemable Preference shares of Rs. 100 each, 30,000—9.5 per cent Cumulative Redeemable Preference shares of Rs. 100 each and 2,97,31,073 Equity shares of Rs. 1.50 each, *Less* : Calls in arrears of Rs. 24,863.

Date of Accounts : 31st December.

ASSOCIATED PULP & PAPER MILLS LTD.

ESTABLISHED in 1962. **Directors :** D. K. Hada (*Chairman*), N. C. Parikh, R. C. Bhaiya, D. K. Dutta (*Nominee of* ICICI), H. L. Khar (*Nominee of* IFCI) and A. K. Hada. **Secretary :** H. M. Mehta. **Registered Office :** B. Jadav Chambers, 2nd Floor, Ashram Road, Ahmedabad-380 009. Gujarat. Telephones : 449928, 449879 Telegrams : 'ASSOPULP'. **Auditors :** Messrs. Manubhai G. Patel & Co.

Objects and Activities : Manufacture of packing and wrapping papers at Bavla in the state of Gujarat. Licensed Capacity has been increased from 7,200 M. tonnes to 15,000 M. tonnes per annum.

CAPITAL : Authorised : Rs. 1,00,00,000 in 47,500 Unclassified shares of Rs. 100 each, 12,500 9.5 per cent Cumulative Redeemable Preference shares of Rs. 100 each and 40,000 Equity shares of Rs. 100 each. **Subscribed :** Rs. 49,99,750 in 12,500—9.5 per cent Cumulative Redeemable Preference shares of Rs. 100 each and 37,500 Equity shares of Rs. 100 each, *Less:* Calls in arrears (equity) Rs. 250.

Date of Accounts : 31st March.

BALAKRISHNA PAPER MILLS LTD.

INCORPORATED in 1961. **Directors :** Mahabirprasad R. Poddar (*Chairman*), Dharaprasad R. Poddar, Ramprasad R. Poddar, Ashok Kumar P. Mahansaria, B. M. Shukla, H. J. Sequeira (*Nominee of* GIC), R. M. Pradhan (*Nominee of* ICICI), R. A. Bantwal (*Nominee of* SICOM), D. S. Mulla. **Registered Office :** 18/24, Nandlal Jani Road, Wadibunder, Bombay-400 009. Telegrams : 'BALPAPER', Telephone : 336447. **Auditors :** Messrs. Jayantilal Thakkar & Co.

Objects and Activities : Manufacture of pulp and paper. The company also manufactures duplex boards, using wood pulp and waste paper as raw material. The synthetic division is engaged in processing. The plant is located at Kalyan about 34 miles from Bomaby with a capacity of 4,500 tons of duplex and box boards per annum.

CAPITAL : Authorised : Rs. 1,00,00,000 in 90,000 Equity shares of Rs. 100 each, 10,000—11 per cent Redeemable Cumulative Preference shares of Rs. 100 each. **Issued, Subscribed and Paid-up :** Rs. 52,98,450 in 60,000 Equity shares of Rs. 100 each, *Less*: Calls unpaid—Rs. 7,01,550.

Date of Accounts : 31st March. **Registration Fee :** *Nil.* **Fee for New Certificate :** Re. 1 per certificate.

BALLARPUR INDUSTRIES LTD.

(Formerly Ballarpur Paper & Straw Board Mills Ltd.)

ESTABLISHED in 1945. **Directors :** L. M. Thapar (*Chairman and Managing Director*), M. M. Thapar, H. P. Poddar, S. M. Ramakrishna Rao, C. P. Merchant A. C. Bose, Keshub Mahindra, S. G. Subramanyan and O. P. Malhotra. **Registered Office :** P. O. Ballarpur, District Chandrapur, Maharashtra. **Head Office :** Thapar House, 124, Janpath, New Delhi. Telegrams : 'SPIRITUAL'. Telephones : 310411 and 310412. **Auditors :** Messrs. K. K. Mankeshwar & Co.

Objects and Activities : The company is engaged in the manufacture of high grade writing, printing coated and packaging papers, stationery, caustic soda, chlorine, hydrochloric acid, hypochlorite, vanaspati, soaps, cans and salt. The mills are at Ballarpur and Yamunanagar with a capacity of 1,20,150 tonnes per annum of writing and printing papers and the factory at Karwar with a capacity of 62,700 TPY of caustic soda, 20,000 TPY of chlorine, and 13,450 TPY of Hydrochloric acid. The company also manufactures salt at Singach, (Gujarat) and at Gokarna (Karnataka). At Singhach, establishment of a marine chemicals project is also being planned and a letter of intent has been received. A Bromine plant has been commissioned in 1983. Refined corn oil under the brand name 'Cornola' has been introduced in the market.

The caustic soda chlorine plant at Karwar has been expanded from 100 tonnes per day to 150 tonnes per day. Application for the expansion to 300 tonnes per day has been made to the government. The plant for the manufacture of 24,000 tonnes per year of sodium tripoly phosphate is under erection and the production is expected to commence shortly.

A new project, P.T. Saraswati Bhakti Coated Papers—a traingular joint venture with PT Tri Usaha Bhakti of Indonesia and Trident Industries Ltd., of Hong Kong, has gone into regular production. The company has also set up a joint venture project in Thailand under the name of Phoenix Pulp and Paper Company Limited for the manufacture of Kenaf based pulp. The new joint venture project set up in Malaysia under the name of Ballarpur Palm Oil Sdn. Bhd. to process crude palm oil for edible purposes has commenced production. The company has also entered into an agreement with APIDC for setting up a joint sector for rayon grade pulp unit at Warangal district of Andhra Pradesh and also with Meghalaya Industrial Development Corporation for setting up a paper mill in the East Khasi Hills district of Meghalaya with an installed capacity of 16,500 tonnes of Sack Kraft, subject to approval of the government. The plant 'Ballarpur Glass (Nigeria) Ltd.' at Nigeria has commenced trial production in 1983.

English Indian Clazys Ltd., Jg. Glass Industries, Ltd., Jg. Moulds Ltd., and Janpath Investments and Holdings Ltd. are the subsidiaries.

Date of Accounts : 31st December.

HINDUSTAN PAPER CORPORATION

(A Government of India Enterprise)

Directors : R. V. Subrahmanian (*Chairman*), K. C. Sodhia, V. K. Chanana, S. N. Tripathi, Dr. A. Panda, B. T. Sridharan, N. C. Tiwari. **Secretary :** A. K. Bajpai. **Registered Office :** Vishal Bhavan, 95, Nehru Place, New Delhi-110 019. **Auditors :** Messrs. Sen & Ray.

Objects and Activities : The Corporation has got three running mills as subsidiary companies, viz. Hindustan Newsprint Ltd. (HNL) Nagaland Pulp & Paper Co. Ltd. (NPPC) and Mandyan National Paper Mills (MNPM). HNL, with a installed capacity of 80,000 TPA. is producing newsprint thereby saving drainage of precious foreign exchange for the country. NPPC & MNPM are manufacturing writing, printing and other varieties of paper.

The Corporation is presently engaged in the construction of two major projects at Nowgong and Cachar Districts in Assam with 1,00,000 TPA capacity each which are poised for commencement of commercial production in April '85 and April '86 respectively.

Through its marketing activities, the Corporation is ensuring equitable distribution of paper and thereby preventing essential users from being starved of paper.

As part of the preparatory national effort to meet the future demand for Paper, the Corporation undertook feasibility studies for establishment of a paper mill based on bamboo and hardwood in Arunachal Pradesh and prepared pre-feasibility reports for setting up bagasse based newsprint/paper mills in Western Uttar Pradesh and Bihar. Hindustan Paper Corporation has since been entrusted with the preparation of detailed project reports for the above three projects by the Government of India.

CAPITAL : Authorised : Rs. 4,00,00,00,000 in 40,00,000 Equity shares of Rs. 1000 each. **Issued, Subscribed and Paid-up :** Rs. 363,67,43,000 in 36,36,743 Equity shares of Rs. 1000 each fully paid-up in cash, *Add* : Share Capital Deposit : received from the Government of India, pending allotment of 6000 Equity shares of Rs. 1000 each.

Date of Accounts : 31st March.

JAYANT PAPER MILLS LTD.

INCORPORATED in 1960. **Directors :** R. T. Popawala (*Chairman*), H. R. Mehta, Y. H. Mehta (*Managing Directors*), V. M. Dhamanwala, M. K. Jariwala, K. V. Choksi, C. R. Mehta, R. M. Gandhi and D. M. Parekh (*Nominee* of GIIC). **Secretary :** J. V. Shah. **Registered Office :** Utran, Surat District, Gujarat. Telephone : 26475 & 29381. **Auditors :** Messrs. J. L. Bhatt & Co. and Messrs. M. A. Parikh & Co.

Objects and Activities : Manufacture of paper and paper boards. The container division manufactures corrugated and solid fibre board containers, export and shipping containers and packaging requisites. The factory is located at Utran, District Surat, Gujarat.

Licensed and Installed Capacity : 18,000 TPA

CAPITAL : Authorised : Rs. 1,00,00,000 in 10,00,000 Equity shares of Rs. 10 each. **Paid-up** Rs. 73,10,475 in 7,30,485 Equity shares of Rs. 10 each fully paid-up, *Add*: Forfeited shares Rs. 5,625. (Of the above, 1,45,950 shares of Rs. 10 each are allotted as fully paid Bonus shares by capitalisation of Reserves.)

Date of Accounts : 30th June.

Dividends declared : 1984—15 per cent, 1983—11.5 per cent, 1982—20 per cent, 1981—20 per cent, 1980—20 per cent.

Tribeni Tissues

Perfecting paper for over three decades

Tribeni's Light Weight Paper, the ideal choice for voluminous and quality works, affords major savings in freight, postal and binding charges.

Wax Match Tissue, for slower, steadier burning, extra safety and instant extinguishing with no after glow.

Our Carbon Base Tissue, used in the manufacture of all types of carbon papers, meets the country's entire needs.

Our Yellow Interleaving Paper, free from radioactive material and chemically pure, keeps X-ray plates free from blemishes and fogging.

Our Packaging Papers are replacing imports and saving valuable foreign exchange Imitation Greaseproof for tea and agarbattles; Twist Wrap for sweets and medicines; Anti-rust Tissue for blades and metals.

Ever since 1951 Cigarette Papers have not been imported Moreover we even export these grades. The range also includes Plug Wrap Tissue, Cork Tipping Base Tissue, Cigarette Filter Base Paper.

Kothari's Association With Plantation Industry

EXTENDS TO FOUR DECADES
SPANS TWO STATES

Covers Two Major Products of Coffee and Tea
and Coffee Curing Works

Kothari Industrial Corporation Limited

PLANTATION DIVISION

"Kothari Buildings"
114/117, Nungambakkam High Road
MADRAS-600 034

ESTATES

Waterfall Estates in Annamallais. Glendale, Brooklands,
Adderley & Colacumbie in Nilgiris.
Coovercolly in Coorg.
Kesinvurthy, Santawerry East & Santawerry West in Chikmagalur.
Kothari Coffee Curing Works in Hassan.

Kothari Teas...
3 flavoursome ways to say "Good Morning"

Now, Kothari's brings you
the sealed-in freshness of the Nilgiris
in 3 exclusive flavours—
Glendale. Waterfall and Brookland.

Take a sip -
mornings never tasted so fresh before!

PLANTATION INDUSTRY

PLANTATIONS in India play a vital role both as an agricultural enterprise and as an industrial establishment. The industry comprising mainly tea, coffee, rubber and cardamom plantations produce annually goods worth Rs. 1400 crores, earns around Rs. 600 crores in foreign exchange, contributes around Rs. 250 crores to the national tax coffers and provides direct-employment to about 1.5 million workers and almost the same number indirectly. The plantation products as a group account for as much as 10 per cent of the total earnings from all exports in the country. Their tax contribution spreads to the Centre, State and Local Governments. Besides, plantations bear a levy of cess under the respective Commodity Acts. The Plantation industry, also has, well developed voluntary schemes for labour welfare, small grower improvement and overall rural progress. It serves as a model for emulation by the growers of general agricultural crops in respect of organised cultivation, adoption of modern management techniques, united representations, preservation of ecology and environment as also offering of a single source for tax collection.

TEA

Tea plantations industry is one of the oldest organised industries in India. It is highly labour-intensive and rural based, providing direct employment to nearly a million people. Tea is grown both in North and South India. Of the five major tea growing states viz. Assam and West Bengal in North India and Tamil Nadu, Kerala and Karnataka in South India, those in North India account for 75 per cent of total tea acreage and total tea output in the country, while those in the South account for the remaining 25 per cent. Tea plantations occupy only 0.6 per cent of the total cultivable area but produce 3.5 per cent of the total agricultural output of the country. A higher growth rate in tea output can be achieved if only more and more areas are brought under tea plantations. Over the last three decades, only 52,000 hectares of new land was added while the tea output had more than doubled. The performance of the tea industry during 1983-84 has been spectacular with its profits as a whole soaring to a remarkable figure of Rs. 500 crores as against an estimate of only Rs. 60 crores in 1981. The gross profits before depreciation and taxation of the 12 leading tea companies was as high as Rs. 94.73 crores during the 12 months ending June 30, 1984 as against Rs. 28.21 crores and Rs. 13.52 crores in the two previous years. The turnover spurted to Rs. 309 crores from Rs. 207 crores in 1982-83 and Rs. 198 crores in 1981-82, due to the realisation of higher average prices and an increase in production.

Source : Economic Times, 8th August, 1984.

The area under tea increased only marginally by about 3000 hectares every year, which was the result of the extension and replanting programme undertaken during Fifth Plan period.

The Sixth Plan envisaged that 4000 hectares would be added to the existing area each year through extension planting. The yearly target for replantation was also set at 4000 hectares. Apart from these aspects, the projections had emphasised the need for improved cultural practices for increasing production. With all this, the production was estimated to increase by an additional 145 million kgs during the plan period, but, the industry's physical achievement during the first three years in the field of new planting and replanting have been much lower than the targets. The total area under tea which stood at 3.82 lakh hectares in 1980 rose to 3.95 lakh hectares in 1982.

Total tea production during the Sixth Plan period has also been lower than the yearly targets viz. 570 million kg as against a targeted figure of 585 million kgs. in the first year, 560 million kg as against the target of 610 million kg in the second year, 561 million kg as against the target of 640 million kg in the third year and 588 million kg as against the targeted figure of 670 million kg in the fourth year. For the fifth year, the production is expected to be around 640 million kg as against the target of 705 million kg. The draft Seventh Plan aims at raising tea output from the current estimated figure of 640 million kg in 1984-85 to 766 million kg by 1989, envisaging an outlay of Rs. 900 crores, which is three times larger than that of the Sixth Plan.

The output during the first five months of 1984 has been impressive. A sudden jump of 50 per cent in tea production during this period (5 months) to 153 million kg has raised expectations about the 1984 tea crop to a record high of 640 million kg. This would mean a [illegible] per cent rise in the current year over the 198[illegible] level of 588 million kg. It is certainly a heartening development after the recent crisis in Indian tea supplies leading to a ban on exports of CTC tea for five months, which, greatly destabilised our overseas market. With the estimated 640 million kg of tea output during 1984, both the domestic demand of about 400 million kg and export target of 215 million kg could be comfortably met. The spectacular performance so far has been on account of the favourable weather as also due to application of modern technology. During the first five months of the current year, South India doubled its tea harvest to 68.9 million kg from 34.4 million kg during the same period of the last year. North India too recorded 23 per cent rise to 84.16 million kg during the same period.

Tea in Seventh Plan

In recent years, India has emerged as the principal consumer of tea in the world. Domestic consumption of tea in India has steadily grown at the rate of 4 to 5 per cent per annum, and it is estimated that by the turn of this Century, increase in production at the present growth rate will certainly be insufficient to meet the increase in domestic demand. In order to maintain the share of the world trade at 28 per cent, India will need an exportable surplus of 273 million kg by 1983, 303 million kgs by 1990, 333 million kg by 1995 and 363 million kg by 2000 A.D. This will be in addition to the rising domestic demand. The Seventh Plan, therefore, envisages a determined effort on the part of the tea industry to achieve rapid growth in production with corresponding increase in export. The targets fixed for production, domestic retention and export for the Seventh Plan are as under :

TABLE 3

Global Trends

The Global tea production during the first three months of 1984 rose to an impressive 1.13 million kg. This is higher by nearly 26 million kg or 24 per cent as compared to the output attained during January-March of 1983. Since, both India and Sri Lanka are expected to reach a bumper tea crop, the world production of tea for 1984 as a whole may easily approximate to 2100 million kg. The world tea crop in 1983 was 2002 million kg an increase of 4.7 per cent over 1912 million kg of the previous year. World production has shown a consistent increase over the years. The year 1978 was a turning point, when the cultivated crop area started falling. Though it fell sharply in 1978 by 21.5 per cent over the 1977 level, yet production had increased by 3.2 per cent during the same period. This was brought about by a sharp increase of 31.5 per cent in the yeild per hectare, from 1103 kg in 1977 to 1450 kg in 1978. Except for the year 1979 when the area cultivated had increased slightly over the previous year, the subsequent years have all shown sharp declines in area, but substantial and impressive increase in production and yield levels. In 1982, cultivated area had fallen by 8 per cent but production had increased by 3.5 per cent and yield levels had jumped by 12.4 per cent, over the previous year. This overall increase in yield levels was due to a remarkable progress in tea production achieved by Indonesia, the U.S.S.R., and China. Traditionally, India has been the largest producer of tea in the world. In 1983, its share in world output was as high as 30 per cent followed by China which accounted for 21.5 per cent of world production. The other major producers like Sri Lanka, Kenya and the U.S.S.R., though with substantial shares, are far below that of India.

Sri Lanka which was the second largest producer of tea in 1973 with a share of 14.8 per cent in world total, steadily lost its share which had fallen to 9 per cent of the total by 1983. This decline though partly related to the unstable political conditions, was mainly fuelled by declining yield levels. It was the only tea producing country whose yield had fallen during the period 1973-82 as against the achievement of other producers whose yield levels had improved remarkably. The low yield in Sri Lanka was the effect of a long dry spell which had ruined the crop particularly in 1982.

The U.S.S.R. which had a 7 per cent share in world production in 1983 has emerged with the highest yield in 1983, even overtaking the yield in India which was the highest and much above the other producers in 1973. The U.S.S.R. experienced a sharp increase in yield of 75.5 per cent from 1012 kg per hectare in 1973 to 1776 kg per hectare in 1982. India had, on the other hand, increased its yield by 17 per cent from 1304 kg per hectare in 1973 to 1526 kg per hectare in 1982.

China has forged ahead of others including India in recording a high growth in tea production during 1982. Its tea output went up by about 15 per cent from 343 million kg in 1981 to 397 million kg in 1982. China's emergence as a country recording the highest production growth in a year when tea output went through a lean patch globally, speaks for the rapid strides this country has made in terms of scientific cropping and cultivation of tea plants over the last few years. The very fact that China has been able to record a remarkable growth rate in recent years should serve a warning to India that its supremacy as the largest tea producer may be very soon seriously challenged.

Japan, another country with over 100 million kg of tea output, recorded a low rate of growth. Its performance reflected a production rise of 2.7 million kg from 102.3 million kg in 1981 to 105 million kg in 1982. Kenya, which is fast coming up as a tea producer showed a 5.5 per cent growth from 90.9 million kg in 1981 to 96 million kg in 1982. Turkey registered a higher growth rate of 16 per cent but on a small production base. Its production went up from 43 million kg in 1981 to 50 million kgs in 1982. Bangladesh improved marginally from 40.1 million kg in 1981 to 40.4 million kg in 1982. Argentina's tea output in 1982 remained at 1981 figure of 30 million kgs.

Trade trends

India's tea exports which suffered a major setback in 1982 due both to a decline in the absolute volume sold in the overseas market and sagging prices, staged a welcome recovery in 1983. As compared to 190 million kg in 1982, the quantum of exports jumped to 215 million kg during the year ending December 1984. This has been accompanied by an even more sharp increase in the average price realisation for every kilogram of tea exported viz. Rs. 34.85 per kg as against Rs. 18.72 per kg. Consequently, the value of tea exports leaped to Rs. 750 crores in 1984 from Rs. 356 crores in 1982.

India ranked as the world's major exporter of tea in 1984, accounting for 25 per cent of the world exports. It was a little less than its share of 26.5 per cent to world total in 1973. In 1982, India exported 209 million kg of tea which is, however, far below the peak level of 234 million kg exported in 1976. The fluctuations in the exports have followed the fluctuation in weather, besides, political turmoil in Assam.

Total world exports of tea were 850 million kg in 1984. an increase of 4 per cent over the previous year's total of 820 million kg. In comparison to 1973, world exports had increased by 19.3 per cent. The peak in exports had been touched in 1980 when exports were 866 million kg. Two countries which stepped up their exports in a big way between 1973-83 were Kenya and China. The other major exporter is Sri Lanka with a share of 18.6 per cent in world exports in 1983. However, its share had come down drastically from 29 per cent of the world total in 1973.

The current tea export picture is not all that bleak. For 1984 an export target of 215 million kg has been set which represents a modest increase of 6 million kg as compared to the preceding year. The rise in tea exports at 69 million kg during January-May 1984 compared to 62 million kg in the same period of 1983, is really impressive despite the fact that the CTC (Crush-Tea-Curl) tea exports ban was in force during the first four months of 1984.

Total world imports of tea were 821 million kg in 1983, a drop of 1.3 per cent over 1982 total of 83 million kg. As compared to 1973, imports had increased by 24.9 per cent in 1983. Imports had touched a peak level of 846 million kg in 1980 and falling again to 806 million kg in 1981. The world's largest tea importing country has been U.K., though its share in world total has come down from 28.2 per cent to 18.9 per cent. The other importing countries are Pakistan, the U.S.S.R. and the U.S.A.

Tea Prices

The most spectacular event that shook the tea economy recently has been the unprecedented and the long rise in prices of the commodity in all auction centres of the world. Progressive depletion of carry-over stocks of tea in the global market since 1970 was the obvious explanation for the buoyancy. On account of high carrying costs, stocks were brought down in most auction centres. Besides these, many countries were caught unaware when India imposed a ban on CTC exports on 25th December 1983. This led to a sudden spurt in prices. That, this price rise occurred inspite of an increase in production also brings out the pressures of an increasing demand. Global absorption began to outstrip production in 1979 and the gap has been widening since then. With 1984 having embarked with favourable weather conditions, production is expected to pick up. The prices of CTC teas and orthodox teas are normalised with the withdrawal of the ban and the Tea Board is hopeful of achieving the 1984 target of 215 million kgs.

COFFEE

Next to tea, coffee is the most important plantation crop which earns considerable foreign exchange for our country. Coffee production and exports have been rising steadily. Indian coffee is popular in world markets because of its good flavour and blending qualities. India ranks 16th among the world coffee exporting countries and 11th among the producing ones. In the early stages of coffee industry in India, emphasis was on the development of a stable home market, though efforts were made to develop exports side by side. In the recent years, the emphasis has rightly been shifted to stepping up coffee exports with a view to earning much-needed foreign exchange for the country.

The main coffee growing states are Karnataka, Kerala and Tamil Nadu. Karnataka alone accounts for nearly 69 per cent of the total production of coffee, followed by Kerala 20 per cent, and Tamil Nadu 10 per cent. The entire production of coffee in the country is from the South, barring, of course, the marginal harvest elsewhere. With 54 per cent of the total coffee area, Karnataka occupies the first place in the coffee map of the country followed by Kerala with 27 per cent and Tamil Nadu 16 per cent. The average yield of coffee during 1982-83 was 648 kg per hectare. In the last three decades, the area under coffee had increased by 125 per cent, production by 528 per cent and yield by 179 per cent. With a good crop expected during 1984, coffee production is expected to touch 1.7 lakh tonnes during 1984-85.

TABLE 9

Area and Production of Coffee

States	1950-51	1960-61	1970-71	1980-81	1981-82

An important measure taken up to boost coffee production in the small farms is the introduction of the dwarf hybrid 'San Ramon' selection 7 variety. This variety can be harvested from the third year onwards unlike other varieties which come to harvest only after five years from the time of planting. The total income from one acre of the hybrid variety of coffee has been estimated at Rs. 5000 per annum resulting in a net profit of Rs. 3000 per annum to the small farmers. In order to achieve an estimated production of 2,00,000 tonnes of coffee by 2000 AD, the Coffee Board has prepared a perspective plan for coffee development in collaboration with the National Council of Applied Economic Research. This will bring under coffee, an additional area of 1.30 lakh hectares in different suitable regions. Different states are taking up implementation of coffee expansion programmes through specialised agencies like the Plantation Corporation, Forest Corporation, etc.

The domestic consumption of coffee has incresed from 47683 tonnes in 1980 to 56079 tonnes in 1983 accounting for an increase of about 18 per cent. However, the per capita consumption in India is only 0.07 kg. one of the lowest in the world. This is due to the fact that coffee consumption is mostly restricted to the southern states which account for 25 per cent of the population. The growth rate of domestic consumption has virtually fallen from 6.3 per cent in 1981 and 1982, to 3.9 per cent in 1983.

The following table presents the trend in domestic consumption of coffee in India:

Exports

India exports coffee to over 65 countries including the U.S.S.R., the U.S.A., Yugoslavia and West Germany. West Europe has been the main market for Indian coffee and its share has been uniformly high. The share of Europe in the total exports of raw coffee from India was 86.2 per cent in 1966-67. However, due to diversification in the market for Indian coffee, particularly after the American market was fully tapped, the share of Europe has come down to 67.8 per cent in 1975-76. Among the European countries the major buyers of Indian coffee have been the East European countries, who have bilateral trade agreement with India. Although there are 64 buyers on the non-quota front, the Indian coffee goes principally to only 14 of them and the USSR is the largest buyer in this sector with nearly 97 per cent of the Indian exports to non-quota countries, going to it.

A total of 83,688 tonnes of coffee valued at Rs. 202 crores were exported from the country during 1982-83 as against 81,220 tonnes valued at Rs. 167 crores exported in the preceding year. Based on an estimated crop of about 95,000 tonnes for 1983-84 season, and taking into consideration the requirements of quota countries as also the commitments made to the U.S.S.R., the Marketing Committee decided on an export allocation of 56,000 tonnes. Against this export allocation the total sales for export inclusive of the export auction on 6th June 84 amounted to 34,244 tonnes. The initial quota fixed for India for export to member countries during the coffee year 1983-84 commencing from 1st October 1983 was 38,702 tonnes. In view of the continuous rise in international prices, there have been four additional releases of 1 million bags each in December, 1983, February 1984 and two in May 1984. This has resulted in an increase in India's quota by 2948 tonnes, each increase, giving an additional quota of 737 tonnes. With these increases, the total annual quota to be fulfilled before 30th September 1984 was raised to 41,651 tonnes. Against this total quota, shipments upto 11th June 1984 were 25708 tonnes in addition to 15798 tonnes exported to non-member countries. The export target fixed by the Government for the fiscal year 1983-84 was 80,000 valued at Rs. 180 crores. As against this target, provisional shipments during the fiscal year amounted to 71,109 tonnes valued at Rs. 174.35 crores. Considering the pace of shipments to quota and non-quota countries, a target of 66,000 tonnes valued at Rs. 155 crores was fixed for the fiscal year 1984-85. The reduction in the target compared to 1983-84 has been due to the fact that the availability for export during the current fiscal is restricted due to the lower crop in 1983-84 as compared to the crop position in 1982-83. Against this target of 66,000 tonnes, the actual exports during April and May 1984 were 14,745 tonnes valued at Rs. 39.92 crores. India and 11 other countries have urged the International Coffee Organization to enhance their quotas as they are very low. In view of the lower coffee crop in 1983-84, due to drought, India is evidently not in a position to export coffee in terms of 1984 Trade Plan provision. According to the Plan, India has to export 35,000 tonnes of green coffee and 2000 tonnes of instant coffee, but because of the poor crop, it has entered into contracts for the export of only 19000 tonnes of green coffee and 1250 tonnes of instant coffee. The Government has, under its proposal, to meet the commitments through imports. India has already entered the competitive market for instant coffee alongwith the International Coffee Organisation member countries. It had signed a contract for trial shipment of 10.5 tonnes of instant coffee to member countries. This breakthrough is essential in view of the higher crop expected in the next few years and also the increased capacity for manufacturing instant coffee.

* Provisional.

The prices in the export auctions have been at higher levels since January 1984 in view of the rise in the international prices of coffee. The prices of Plantation A during January-May 1984 ranged between Rs. 1286 per 50 kg and Rs. 1409.50 per 50 kg. In respect of Arabica Cherry AB the prices ranged between 1203.50 per 50 kg and Rs. 1331.50 per 50 kg and for Robusta Cherry between Rs. 1165 per 50 kg and Rs. 1354 per 50 kg. The rate of export duty on coffee has been increased from Rs. 640 per quintal to Rs. 720 per quintal with effect from 9th October 1984. This revision has been made by the Government following the increase in international prices.

The current annual global quota for the coffee year 1983-84, amounts to 60.2 million bags against the initial global quota of 56.2 million bags fixed at the commencement of this coffee year. The increase in the global quota was due to additional releases of 1 million bags each on four occasions, consequent on increase in international prices. To contain the rising prices, the Coffee Board has also decided to advance 1 million bags from the last quarter to the third quarter.

Coffee is one of the few world commodities that continues to significantly influence the economic life of several countries like Burundi, Venezula, Ethiopia, Columbia and El Salvador. These countries depend on coffee exports for earning the bulk of the foreign exchange needed by them for importation of manufactured and semi-manufactured goods. Out of the total value of all exports in 1982 by coffee exporting member countries, amounting to 151,004 million US dollars, the value of exports of coffee alone by exporting members amounted to 8946.9 million US dollars. This constitutes a little over 5% of the total value of all exports by such exporting members.

The following tables give the total value of exports of all forms of coffee by each exporting member and the value of exports of all forms of coffee by each exporting member country as a percentage of the total value of all exports during the years 1980, 1981 and 1982.

Source : Indian Coffee, June '84.

An analysis of the various aspects of the coffee industry in India shows that, though the industry has been facing certain problems such as predominance of small estates which are uneconomic, shortage of finance, heavy tax burden, depletion of resources, untimely monsoons etc., there has been a significant all-round development. The Coffee Board has taken up a number of promotional measures that go a long way in developing this industry. It is up to the Indian coffee industry to exploit all favourable factors and to devise means to put the industry on a growth path. Unless a pragmatic strategy is chalked out for both domestic and export sales, India will continue to be dependent on the misfortunes of other producing nations to make a fortune for itself.

RUBBER

National rubber in India owes its acreage to the South and Kerala has, as much as 91 per cent of it followed by Kanyakumari district in Tamil Nadu with 5 per cent while the rest is distributed in Karnataka and Andaman and Nicobar Islands. Of late, rubber cultivation has begun in Andhra Pradesh, Goa, Tripura, Maharashtra and North-east India on an experimental basis. As much as 92 per cent of the country's output of 1,65,850 tonnes in 1982-83 came from Kerala, while Tamil Nadu contributed 7 per cent. The area and production of natural rubber in the country is shown in the Table below :

TABLE 15

Area and Production of Rubber

Others	..	..	0.2	0.6	1.9	1.9
Total	..	69.0	129.9	203.1	241.5	241.5
Production (in '000 tonnes)						
Karnataka	..	..	0.5	0.5	2.1	2.6
Kerala	..	14.2	23.2	86.8	140.3	139.4
Tamil Nadu	..	1.6	2.0	4.8	10.4	10.5
Others	..	..	..	0.1	0.3	0.4
Total	..	15.8	25.7	92.2	153.1	152.9

The average yield of natural rubber was 830 kgs per hectare in 1982-83. In the last three decades, the area under this crop has increased by 250 per cent, production by 864 per cent and yield by 178 per cent.

The number of units in the organised sector engaged in production of rubber goods increased to 110 during 1982-83 from 109 units in the previous year. Production of automobile tyre recorded a decline of 1.7 per cent in 1982-83 as against a growth of 11.5 per cent in 1981-82 mainly due to constraints like power shortage and high cost of raw materials. On the other hand, output of cycle tyres increased at the rate of 5.1 per cent as against a negative growth rate of 5.2 per cent in 1981-82. As regards rubber footwear, production was higher at 409.7 lakh pairs than 377.6 lakh pairs in 1981-82.

Although India was importing natural rubber in the 1950s, she was also exporting till 1956-57. In the next 16 years, she was an importer-producer and it was in 1973-74 that a reversal trend figured. Imports were stopped and exports were carried on till 1977-78. Thereafter the gap between domestic production and consumption widened necessitating imports and India continues to import natural rubber. As against the import of 30,000 tonnes valued at Rs. 23.7 crores in 1982-83, the country has imported up to 20th March 1984 32,200 tonnes valued at Rs. 36.9 crores, which, is certainly very high particularly in terms of value.

The production of natural rubber in 1983-84 the last year of the Sixth Plan was estimated to be 185,000 tonnes against the consumption estimate of 220,000 tonnes. In view of the increasing demand for natural rubber, the Working Group, after taking into account the availability of suitable lands, have proposed the target for expansion of rubber area, during the Seventh Plan, to be 1,00,000 hectares at the rate of 20,000 hectares per year. It has also proposed a production target of 2,65,000 tonnes by the end of the Seventh Plan in 1990 against the estimated demand of 2,95,000 tonnes.

In the production of natural rubber, India accounts for 4 per cent of the world rubber and occupies the fourth position next to Malaysia, Indonesia and Thailand. India is the only country which has the advantage of a growing rubber goods manufacturing industry as an adjunct to the plantation sector.

With the intensive rubber production-drive launched by Rubber Board and subject to availability of suitable lands for cultivation it is estimated that by 1999-2000 it would be possible to bring down the import of natural rubber to zero with the production going up to 5 lakh tonnes as against the estimated demand of 4.70 lakh tonnes.

CASHEW

Cashew ranks second among the nine treenuts which figure prominently in interntional trade circles. It adopts to various types of soils and climatic conditions and is a hardy and drought resistant tree. For several centuries, the cashew tree was considered merely as a sturdy perennial tree which yielded soft wood and bore the delicious juicy cashew apple. The peculiarity of the cashew apple is that it has nut outside. In the past the nut was thrown away after the apple was eaten since it has a hard shell cover which contains a corrosive liquid that burns the skin on contact. In a passage of time interest developed in the nut and various methods of extracting kernel from the nut proved to be successful.

The major cashew growing states of India are Kerala, Tamilnadu, Karnataka, Andhra Pradesh, Goa, Maharashtra and Orissa while the minor cashew growing states are Tripura, Pondicherry and West Bengal. At present, around 4,17,000 hectares are under cashew cultivation with an annual yield of approximately 1,60,000 tonnes. Conscientious efforts since independence have brought more and more land under cashew crop cultivation. The total requirement of raw nut to maintain our level of export and also to meet local consumption would be 3 lakh tonnes and the total requirement to feed all the processing units in India is estimated at over 5 lakh tonnes. Hence the gap in raw nut availability has to be made up by imports from African countries and through increased domestic production.

Exports : India's earnings from cashew exports fell from Rs. 150.7 crores in 1982 to Rs. 137.7 crores in 1983 despite higher exports in quantitative terms. A total of 35,697 tonnes of cashew kernels were exported in 1983 against 31,787 tonnes in the preceding year thus marking a 12 per cent quantitative increase. The fall in the value of cashew exports was due to the lowe unit value export price which was 38.57 per kg in 1983 as against Rs. 47.42 per kg in 1982 an Rs. 58.39 in 1981. The U.S. with imports o 22,199 tonnes or 62 per cent of the total, continue to be, by far, the largest importer of India cashew in 1983. The other important markets i 1983 were the Netherlands with 2722 tonnes Japan—2318 tonnes, Australia—1460 tonnes Singapore—1389 tonnes, Canada—1202 tonne and the U.K. with 1167 tonnes. Exports o cashewnut shell liquid from India during 198 totalled 3176 tonnes valued at Rs. 12 millio against 5799 tonnes valued at Rs. 17.5 million in 1982. Due to very high wage levels in the western countries, the cost of processing and marketing was very high and hence the price of consumer level was even up to two and a half times the import price of plain cashew kernels. In view of the heavy loss sustained by the cashew industry during 1982-83, the Cashew Export Promotion Council had urged the Union Government to treat the outstanding of cashew processors for the period of 1981-82 and 1982-83 as interest—free term loans, repayable in five annual instalments. Representations have been also made with regard to waiving of interest so far accrued, and continued financing of the future business as usual.

The import of raw cashewnuts during 1983-84 had improved tremendously to 20,635 tonnes as against 896 tonnes in the previous year. Cashew exports registered an 18 per cent increase during 1983-84 with 36,196 tonnes valued at Rs. 148.28 crores being exported as against 30,195 tonnes valued at Rs. 132.28 crores in the previous year. There was however, a fall in the average export price to Rs. 40,965 a tonne in 1983-84 against Rs. 43,809 a tonne in the preceding year. While the U.S.S.R. withdrew from the market last year, there was a tremendous surge in exports to the U.S. amounting to 23,049 tonnes valued at Rs. 92.76 crores compared to only 6,594 tonnes valued at Rs. 27.29 crores, the previous year. The Government has also decided to go in for value added products. Entrepreneurs had been given incentives to set up units to pack salted and roasted cashew nuts which have 200 per cent added value. The duty on import of machinery to set up plant for such packaging has been reduced from 220 to 40 per cent.

COCOA

Cocoa is relatively a new crop in India, though it has been known as a beverage in world trade since the 15th century. The first serious experiment in commercial cultivation was undertaken at the Kallar-Burliar experimental farm in the Nilgiris district of Tamil Nadu. By 1964, India had 200 acres under cocoa, mostly immature, but the thrust began to pick up momentum in the 1970s when the figure rose to 3000 acres. Attractive prices and a stable market subsequently gave a boost to cocoa cultivation, with about 30 million cocoa plants being distributed between 1972 and 1982. Currently, it is estimated that as much as 20,000 acres are under the crop which is mostly immature. The present mature area is around 7500 acres on the basis of a yearly production of around 2,700 tonnes and an average yield of 900 kg per acre.

The most attractive regions for growing cocoa lies along the Western Ghats which receive both the South-west and North-east monsoons. Kerala is the major cocoa growing state in the country. Since large acreages in such regions are devoted to coconut and arecanut, cocoa has proved to be an attractive intercrop. About 80 per cent of the cocoa acreage is interplanted in coconut and arecanut.

Indian cocoa was primarily grown to meet the internl demand. But, planting has outgrown domestic requirements and a surplus has emerged which will have to be routed into the export trade. While manufacturers within the country have established their individual buying arrangements, the emerging export trade which is in the formative stage is yet to establish orderly marketing systems. In entering world trade, Indian cocoa is subjected to world price fluctuations. Indian producers will thus have to become familiar with market preferences, establish overseas contacts, develop a better understanding of regional and varietal qualities, scientific grading and storing, product development and better packaging. Since the quantity India has to offer for export is presently limited, sources of regular supply will have to be established before the export trade can be organised.

SPICES

Indian spices have been famous for the finest quality and the demand for them has considerably increased in all countries. India, being the traditional home of spices, produces and exports almost all known spices, namely, pepper, cardamom, chillies, ginger, turmeric, saffron, etc. The export earnings from spices showed a rise of more than 841 per cent from Rs. 16.6 crores in 1960-61 to Rs. 160 crores in 1980-81. The share of spices in the total exports went up marginally during this period from 2.6 per cent to 3 per cent. Inspite of the lack of large scale efforts to promote the country's spices in several world markets, the prospects for the different individual spices are still bright as evident from the phenomenal export growth in recent years.

Pepper

Pepper is known as the ' king of spices '. The Indian black pepper is superior in quality and fetches good foreign exchange for the country. Pepper production in India accounts for about 25 per cent of the total world production of about 1,30,000 tonnes.

TABLE 16

Exports of Pepper from India

Year		Quantity (tonnes)	Value (Rs. in crores)
1979-80	..	20,898	33.52
1980-81	..	26,364	38.95
1981-82	..	20,608	27.98
1982-83	..	22,592	29.39

Source : Economic Trends—16-12-83.

India's share in the global pepper trade is on the decline as is evident from the fact that its share in the world pepper trade is now only 21 per cent compared to 80 per cent in 1947. The stagnant productivity and the loss of export monopoly are not only due to inadequate attention to development but, also the inability of small farmers to adopt to modern practices of cultivation. In addition to the above factors, publicity for new pepper products and market intelligence are also lacking on the export front. Unless the Government takes suitable steps to cross these hurdles there can be no growth on the export front. The Government will do well to encourage the production and export in appreciable quantities, of items like the green pepper (pickled and dehydrated), pepper powder and pepper oleoresin besides whole pepper. Of late, the pepper cultivation is receiving attention of the Government which is expected to reverse the trend and improve the situation.

Cardamom

Since time immemorial the civilised nations of the ancient world visualised India as the ' home of spices '. It was more particularly cardamom which attracted people from strange lands to the shores of India to barter their wares. For a long time, India has been the largest producer of this spice with annual production ranging between 2500-4500 tonnes, followed by Gautemala, Tanzania and Sri Lanka. The cultivation of this crop is fast catching up in countries like El Salvador, Honduras and Nicaragua. The cardamom of Indian origin is much fancied abroad because of its excellent qualities of odour and taste, though it does not equal the Gautemala variety in colour and uniformity— a fact which explains why that country had made serious inroads into India's markets abroad. Cardamom known as ' Green Gold ' and ' Queen of spices ' has a wide variety of uses in cooked foods, beverages and in medicines. In the Middle East no social or religious function is complete without serving ' Gahwa ' or cardamom-flavoured coffee. This explains why the Middle East is a major customer for cardamom produced in India. There are three varieties of cardamom—cardamom (Aframomum species), Greater cardamom (Amomum species) and Lesser cardamom (Elettaria species). Of these, the last variety which is usually called Malabar or Ceylon cardamom is the most important from the commercial point of view since, much of the world trade in cardamom takes place in this variety only.

In India, cardamom cultivation is primarily confined to the Southern states, Kerala accounting for 70 per cent, Karnataka 23 per cent and Tamil Nadu 7 per cent of the total production. The total area under cardamom is estimated at 94,000 hectares. The performance on the production front has been far from satisfactory. From 3780 tonnes in 1963-64 it declined to 2280 tonnes (average) in 1964-69, reached a peak of 4500 tonnes in 1979-80 and declined to 4000 tonnes in 1980-81. It again plunged to 2900 tonnes in 1982-83 and nose-dived to 1600 tonnes in 1983-84 the lowest in recent memory. A survey of the damage caused to cardamom plantations due to drought in 1982-83 and 1983-84 reveals that plants in about 40 per cent of the area have been lost and, on an average, about 30 per cent of the plants have died resulting in a crop loss of over 2000 tonnes worth Rs. 40 crores. The stagnation in production is attributable, apart from drought, to other constraints like the land tenure policies, lack of intensive research activities, problems of pests and diseases, predominance of small holders in the industry, limited scope for expansion in area and the tax structure. The conditions are reported to be congenial for the 1984-85 crop but the residual effect of the drought damage remains to be assessed. The crop for 1984-85 is estimated at 3000 tonnes.

A study of the global cardamom production indicates that Guatemala whose output in the early Seventies was just a quarter of India, had expanded the area under the crop in recent years and increased its yield substantially by augmenting productivity in a big way. Its average yield per hectare is 300 kg as against India's 60 kg. Tanzania overtook Sri Lanka in the early Seventies and has emerged as the third highest producer. Its production registered a spectacular leap in the Mid Seventies but tapered off in the later years. The fourth largest producer, Sri Lanka has remained static.

The following Table shows how, despite a marginal increase in production between 1970-72 and 1980-82, India's share has declined in view of the leap achieved by Guatemala.

TABLE 17

Four Major Cardamom Producing Countries

Countries	Average Annual Production 1970-72		Average Annual Production 1980-82	
	Quantity (Tonnes)	Share (Percentage)	Quantity (Tonnes)	Share (Percentage)
India	3208	72	3800	44
Guatemala	785	17	4202	48
Tanzania	188	4	435	5
Sri Lanka	301	7	293	3
	4482	100	8730	100

Source : Economic Trends, 1-9-84,

The annual growth rate has been 18.27 per cent for Guatemala, 8.79 per cent for Tanzania and only 1.70 per cent for India during this period.

The total world export of cardamom is estimated at around $ 100 millions a year against $ 10,000 millions for coffee, $ 3,500 millions for natural rubber and $ 2000 millions for tea. Global export of cardamom has increased substantially in the last decade. It touched 8000 tonnes in 1980 against 3100 tonnes in 1970. In 1981 and 1982 it was lower at about 6700 tonnes and 5500 tonnes respectively, due to lower production in India and Guatemala. It was in 1979 that Guatemala gained a lead over India. India's share in world exports which stood at 60 per cent in 1970-72 declined to 28 per cent in 1980-82 while that of Guatemala increased to 62 per cent from 27 per cent during the same period. The growth of global exports has been of the order of 8.71 per cent a year during this period. As in the case of tea, coffee and rubber, India enjoys a sizeable home market for cardamom. About 40 per cent of the harvest is retained for the domestic market. Sri Lanka has a home demand of about one third of its output. Domestic consumption of cardamom in Guatemala and Tanzania is insignificant.

India exports cardamom to more than 70 countries but her major buyers are Saudi Arabia, Iran, Kuwait, Dubai, Bahrain, Quatar, U.S.S.R., Afghanistan, Singapore, France, U.S., U.K., Sweden, Federal Republic of Germany. The export of cardamom has more than doubled during the first quarter of 1984-85 compared to the same period last year. The export earnings went up by more than three times which was due to the increase in the unit export price by Rs. 209.30 per kg from Rs. 178.63 to Rs. 387.93 per kg. During April-June of 1984 a quantity of 3,02,253 kgs valued at Rs. 11.72 crores were exported compared to 1,41,475 kgs valued at Rs. 2.63 crores during the same period last year. With the steep fall in production on account of unprecedented drought last year, the export also declined to the lowest ever quantity of 258 tonnes. Despite the near stagnation in exports in the recent years' the export earnings from cardamom have been maintained almost at the same level in view of the phenomenal increase in the unit price. The export position of Indian cardamom during the last three years is given below.

TABLE 18

Source ; Economic Trends—1.9.84.

In view of the vast potential for growth, the United Planters Association of Southern India (UPASI) has drawn up an action programme for the development and marketing of cardamom. The plan envisages an outlay of Rs. 352 crores for augmenting production by 7313 tonnes during a period of 15 years. It is based on the Seventh Plan target of 5 per cent growth rate to achieve a total production of 6500 tonnes by 1989-90 so that 5000 tonnes could be exported to earn foreign exchange of Rs. 100 crores. The plan also envisages infilling an area of 1903 hectares each year and replanting on an area of 5490 hectares each year during the next 15 years. However, the programme for infilling and replanting was contingent upon the evolution of a suitable taxation system and the creation of a congenial financial climate. It is urged that the industry should be brought under the 'priority sector' for bank financing to get the facility of lower interest rates and that the replanting subsidy be provided by the Cardamom Board, to all without discrimination between the small and large growers. The plan, besides suggesting some measures to minimise fluctuations in production and interfield variations so as to ensure a uniform yield in all the areas to the extent possible, has also emphasised the importance of forming an international community of the cardamom producing countries for safeguarding and promoting Indian interests in the export market.

Turmeric

Turmeric has surpassed chillies in the spices trade by becoming the third largest foreign exchange earner. India, being the major turmeric producing country in the world, accounts for more than 50 per cent of the world trade. In 1979-80, the total area under turmeric cultivation was 82,200 hectares producing about 1,47,000 tonnes of cured rhizomes. The export of turmeric as wholes and powder varied from 2310 tonnes in 1960-61 to 21,514 tonnes in 1979-80. Per hectare yield of turmeric is about 1,700 kg and the internal consumption of turmeric in 1977-78 was 1,14,481 tonnes against 97,904 tonnes in 1976-77.

Chillies

Cultivation of chillies is widely scattered throughout the country. The area under chillies has increased from 66,700 hectares in 1960-61 to 80,500 hectares in 1978-79, an increase of about 51 per cent. The output of chillies went up by more than 69 per cent from 37,600 tonnes in 1960-61 to 63,800 tonnes in 1978-79, the average yield per hectare being 792 kg against 506 kg in 1960-61.

Ginger

India is the leading ginger producing country and accounts for about 50 per cent of dry ginger output in the world. India exported 9,466 tonnes of ginger worth Rs. 136.44 million in 1980-81. Besides dry ginger, ginger oleoresin and ginger oil are also exported. The total area under ginger cultivation increased from 19,000 hectares in 1960-61 to 34,000 tonnes in 1980-81. The contributory factor for this sharp rise in output was the yield, which more than doubled from 900 kg per hectare in 1960-61 to 1959 kg per hectare in 1978-79. Among the spices cultivation, the rate of growth in area under ginger cultivation was the highest which was about 4 per cent per annum. Likewise, the growth rate of output and productivity was also high.

Other minor spices which are exported from India are curry powder, coriander, cumin etc. From the above, it emerges that the export of spices offer bright prospects, provided both the Central and State Governments pay adequate attention to the development of the spices in general and pepper in particular.

Considering the significant contributions made by the Plantations Industry to the economy in the form of foreign exchange, and also the existence of vast potential for growth, it is imperative on the part of the Government to lay down suitable policies as would enable India to achieve the target production to meet not only the ever growing domestic demand but also increase exports to a remarkable extent. In view of the situation now prevalent in this industry, it is suggested that besides liberalisation of the licensing rules, import-export policies, the price and distribution controls, and the granting of fiscal reliefs, the establishment of a development fund and the provision of depreciation allowance to which the industry has been looking forward to, for long, would do well to enable the industry reach great heights.

ALAGESWAR ESTATES LTD.

ESTABLISHED in 1943. **Directors :** M. SP. Subramanian (*Managing Director*), P. V. RM. Kulandayan Chettiar, P. V. AL. Kulandayan Chettiar, P. V. AL. VE. Alagappan, VE. Kasiviswanathan, Smt. One of our best-known unknown men

IEL's 'Chand Chhap' urea is among the best-known brands of fertilizers—for its reliable, consistently high quality. Behind this reputation for quality is a team of dedicated men, who exercise the strictest control at every stage. Even the material for packing is tested to ensure proper storage of urea till it reaches the farmer.

The quality of IEL's product is complemented by the quality of its service. Through its integrated marketing and distribution network which is backed by an experienced field staff, IEL ensures a steady supply of fertilizers right to the farmer's doorstep. IEL also helps the farmer reap more, by offering him a total package of scientific inputs.

IEL : at the roots of growth

Associated Concern : Arkonam Castings & Forgings Ltd.
Manufacturers of Heavy Steel Castings.

SUGAR INDUSTRY

THE sugar industry is stated to be the second largest among processing industries, in India, next only to textiles. Around 20 factories with a combined investment of over s. 1500 crores operate in India and produce nnually an output valued at over Rs. 3000 crores. he industry's contribution to the exchequers of entral and State Governments is in excess of s. 400 crores by way of excise and other levies. ugar has also made significant contributions to e foreign exchange earnings of the country ver the years. The export earnings of the sugar dustry steadily rose from Rs. 12 crores in 1957 a peak level of Rs. 472 crores in 1975-76; hereafter there was a decline and the figure tands at Rs. 141 crores for the year 1983-84.

The sugar industry provides direct employment about 3.25 lakh workers, besides providing direct sustenance to about 30 million cane rowers all over the country. The sugar industry also a major source of carbohydrates for the dian masses. Per capita sugar consumption in dia is around 9 kg but taking into account e consumption of gur and khandsari, the total onsumption of sweetening agents is around 0 kg per capita which measures nearly upto the orld average. The sugar industry has been ccorded considerable importantce by the Governent and both its price and availability have been ubjected to strict regulation. Despite this, there ere instances of either market glut or artificial scarcity marked by slumping or sky-rocketing prices.

The industry, by and large, had a chequered growth pattern in India. The expansion was rapid in certain phases both in the pre-independence and post-Independence periods. On the other hand, it witnessed prolonged periods of stagnation in the intermittent phases. While creation of capacity registered little or tardy progress over some periods with sudden forward leaps in between, annual production followed anything but a regular pattern of steady increase. Its expansion pattern has been along an irregular course with a number of peaks and troughs. The crucial determinants of output levels have been the price policy of the Government and the expectations of sales realisation by cane growers. Unfortunately, no meaningful policy with an integrated long-term vision has so far been formulated to tackle these wild variations in crucial parameters and to chalk out a steady growth path for the industry.

History

Indian mythology supports the fact that India has been known as the original home of sugar and sugarcane. However, the advent of modern sugar processing industry by direct vacuum pan method in India may be said to have started with the adoption of the policy of Discriminating Protection by the Government of India in 1932. Consequences of this protection were both immediate and remarkable. In the mid-twenties a number of sugar mills sprang up in Uttar Pradesh and Bihar and within a period of four years of the grant of protection, the country became pracitcally self-sufficient in respect of sugar.

The post-protection story of India's sugar industry is revealing. From a scanty 32 working units in 1931-32, the number of factories rose to 130 by 1934-35 and the volume of sugar output which stood at 1.62 lakh tonnes, rose to 9.47 lakh tonnes by 1935-36. The rate of expansion over so short a period constitutes almost a world record. By 1938-39 the production of sugar touched 12.77 lakh tonnes. During the war and post-war period, there was a slight reversal of the trend mainly due to unstable cane supplies caused by the Government's preference to food crops during the war years.

After Independence, the industry made a steady progress especially with the commencement of the Plan era and the only phase of dissatisfactory performance, was at the beginning of the 'Plan holiday', i.e. between 1966-69, when sugarcane availability was affected by severe drought conditions.

The production during 1969-70, the first year of the Fourth Plan was an all time record of 42.6 lakh tonnes. The production, however, could not be maintained at this level in 1970-71 and it declined to 37.4 lakh tonnes during that period. With a large carry forward stock of about 22 lakh tonnes from the previous season, the total availability of sugar was still higher at 58 lakh tonnes.

Due to larger availability of stocks, the Government had decontrolled sugar from 25th May 1971. However, the policy of decontrol could not continue for long as the production in 1971-72 declined to 31.1 lakh tonnes. As a result of the sharp decline in sugar production with consequent reduction in its availability, sugar prices showed an upward trend. Realising the difficult situation, the industry voluntarily offered to supply 60% of the released monthly quota at a fixed price of Rs. 150 per quintal, to meet the requirements of domestic consumers. The industry had also offered further 3.5% of its production for export. The scheme successfully continued for six month which expired on 30th June 1972. Governmen then decided to re-impose partial control on suga from 1st July 1972 which was removed on 15th August 1978. The sugar production improved to 38.7 lakh tonnes in 1972-73 and 39.5 lakh tonnes in 1973-74 due to increase in sugarcane acreage and its production. The higher cane price paid by the industry, the excise duty concessions on increased production and imposition of levy on first processed Khandsari production in U.P. had enabled the sugar industry to maximise its output by achieving an output of 47.9 lakh tonnes in 1974-75 as against 39.5 lakh tonnes achieved during the preceding season.

The policy of partial decontrol on sugar was extended for the season 1974-75 and the proportion of levy and free sugar was continued at 70 : 30. However, by a separate press note dated 29th January 1975 the Government had revised the proportion of levy and free sugar to 65 : 35. The additional 5% free sugar was allowed to the industry as Government did not allow all the cost increases in the computation of levy price which stood at Rs. 2.15 per kg. This policy was continued by the Government till 1977-78. The price of levy sugar was revised by it with effect from March 1978 by a uniform increase of Rs. 19.50 per quintal for all the regions in the country. The average levy price for the country was raised from Rs. 168 to Rs. 187.50 per quintal. Due to abundance of cane supplies and its lower off-take by gur and khandsari producers, the sugar factories had to crush more cane during 1977-78 season, utilising 37% of the crop as against their normal intake of about 30%. The industry thus achieved a record sugar production of 64.72 lakh tonnes by continuing crushing during the hot summer months, with an installed capacity of about 55, lakh tonnes.

Faced with an all time record sugar production of 64.72 lakh tonnes in addition to a heavy carry-over of 32.89 lakh tonnes at the beginning of the season 1977-78, the Government of India decided to decontrol sugar completely with effect from 16th August 1978. As a result, there was a great rush for disposal of the accumulated stocks by the factories and consequently the sugar prices declined o highly uneconomic levels causing serious losses o the industry. In order to overcome the above ituation, the sugar industry in all the three sectors amely the joint sector, the public and the co-operative sectors jointly adopted a voluntary scheme of regulation of monthly releases of sugar effective from 1st March, 1979. However, early in June 1979 the Governmnt reinstated the monthly release system. With price trends continuing to be rising, the Government intervened and imposed complete control on sugar with effect from 17th September 1979. The policy was reversed on 17th December 1979 to that of dual pricing with 65% for levy and 35% for free sale.

In March 1980, the Government instituted an enquiry into cost structure and other relevant matters of the industry. Following the recommedations of the committee, the policy of partial decontrol was restored in its true sense effective from 30th November 1980 when the prices of levy sugar were fixed on the basis of statutory minimum cane price, without any linkage with free sugar or actual cane prices.

Thus after a brief period of complete decontrol from 16th August 1978 to 16th December 1979, the Government of India reintroduced the policy of partial decontrol with duel pricing system. This policy has been continuing in force thereafter.

Sugar production has been going through cycles of surplus and deficit phases. Area under sugarcane cultivation has also been alternating between expansion and shrinkage, chiefly in response to policy and price incentives or disincentives. After production touched 64.62 lakh tonnes in 1977-78, it came down to 58.44 lakh tonnes in 1978-79 and further declined to 38.59 lakh tonnes in 1979-80. Production of sugar rose once again to 51.48 lakh tonnes in 1980-81 and reached a record level of 84.38 lakh tonnes in 1981-82. In the subsequent year i.e. 1982-83, production was still at a high level of 82.32 lakh tonnes, though this was marginally lower than the peak attained in the preceding year. However, provisional figures for 1983-84 show that sugar production has again declined and is placed around 59 lakh tonnes. The drop in production is quite sharp and was not expected at the start of the season. Estimates for the year at the beginning were placed at not less than 75 lakh tonnes ; the figure was scaled down successively to 70 lakh and 65 lakh tonnes and have finally been placed at around 59 lakh tonnes.

A combination of several adverse factors has been responsible for the present state of affairs, the chief among them being shrinkage in cane acreage and substantially lower yields. The lower cane acreage may in turn be attributed to the inability of the industry to pay the comparatively high cane prices fixed because their own realisation from the sale of levy and non-levy sugar was inadequate to meet such payments. As is inevitable under such circumstances, a point has been reached where the incentive of high cane price has been overtaken by the disincentive of very delayed payments. The growers have therefore preferred to sell their cane to commercial producers of gur and khandsari at considerably lower rates on considerations of getting cash payments instead of much higher payments from factories later. Thus, there is diversion of cane stocks to gur and khandsari in current period and diversion of land area to more profitable crops in the future period, resulting in reduced output of sugar on both counts. The following Table traces the production trend in sugar in the country since 1971-72.

TABLE 1

Production of Sugar in India

Year		Production	Increase (+) Decrease(—) (percentage)
1971—72	..	31.10	
1972—73	..	38.74	(+) 24.57
1973—74	..	39.48	(+) 1.91
1974—75	..	47.97	(+) 21.50
1975—76	..	42.64	(—) 11.11
1976—77	..	48.43	(+) 13.58
1977—78	..	64.62	(+) 33.43
1978—79	..	58.44	(—) 9.56
1979—80	..	38.59	(—) 33.97
1980—81	..	51.48	(+) 33.40
1981—82	..	84.38	(+) 63.91
1982—83	..	82.32	(—) 2.44
1983—84	..	59	(—) 28.33
1984—85 (E)	..	64	

(E)-Government Estimates.

Thus, sugar production during 1983-84 season registered a decline of 28.33 per cent from a marginal fall of 2.44 per cent the previous season, after having witnessed a record increase of 63.91 per cent in the 1981-82 season. Closing stocks with factories were reported to be around 27.5 lakh tonnes as against 49.8 lakh tonnes last season at the same time. Total offtake during the season is reported to be around 73 lakh tonnes for domestic consumption and 6.5 lakh tonnes for export.

The lower output is partly explained by the fact that there was a reduction in the area under cane as well as in the yields per hectare in states like Maharashtra, Andhra Pradesh and Tamil Nadu due to prolonged dry spells last year. Late rains in the northern region also led to lower recovery of sugar.

It is reported that around the middle of the 1983-84 season, only 87 sugar mills were working as against 224 functioning the previous season. The statewise break-up of sugar factories working as on April 30, 1984 is given below with the number for the previous season given in brackets : Uttar Pradesh 49 (against 74 in 1982-83) ; Maharashtra 10 (60) ; Bihar 2 (25) ; Andhra Pradesh 2 (9) ; Karnataka : 0 (8) ; Tamil Nadu 12 (21); Punjab 1 (4) ; Madhya Pradesh 3 (5) ; Gujarat 5 (10).

The Sixth Plan had estimated the annual requirements of sugar for 1983-84 as 73 lakh tonnes. Even though production for the year is lower than this estimate, the total availability of sugar should pose no problem in view of the huge carry over stocks of 46 lakh tonnes available during the year. It is also interesting to note that the Sixth Plan had projected an output level of 76 lakh tonnes by 1984-85. The following projections were made in the Plan document. ' Domestic demand for sugar would reach a level of 6.8 million (68 lakh) tonnes by 1984-85. It should be possible to raise sugar production to 7.6 million (76 lakh) tonnes by 1984-85. This projected level of production would not only meet the demand of the domestic market, but may also enable our sugar exports to reach a level of 0.8 million (8 lakhs) '. Under the prevailing circumstances, however, there is not much optimism that these targets would be achieved. The following are the Sixth Plan projections :

TABLE 2

Supply-Demand Balance for Sugar

	1979-80	1984-85
	(Million	tonnes)
Domestic demand	5.1	6.8
Exports	0.2	0.8
Total demand	5.3	7.6
Production	3.9	7.6
Stock depletion	1.4	..
Total supply	5.3	7.6

Buffer stock

During the years of production shortfall, as in 1983-84, the shortages in supply are made good through releases from stocks accumulated. Thus steps taken by the Government in creating a buffer stock of 10 lakh tonnes have been widely appreciated. However, considering the extent of variations and the size of the country's population, it is necessary to build up a higher buffer stock. Industry circles have been suggesting a buffer of the size 20 lakh tonnes. The buffer stock arrangement serves as a useful mechanism for protecting the sugar economy from violent fluctuations both in the matter of supply and prices. Releases from the buffer stock are made as and when required, so that prices are pegged at reasonable levels and consumer interests are not impaired. Such releases are regulated such that in times of plenty, business interests are protected from slumps in prices. Buffer stock operations come in handy for the Government when it is desired to numb or discourage speculative hoarding or dehoarding by traders.

Though a buffer stock of 10 lakh tonnes was built up by the Government, these stocks suffered a depletion in the sugar season 1983-84. The sharp fall in sugar production necessitated release of sugar out of the buffer stock which thus stood at 6.5 lakh tonnes in August 1984.

To check speculative hoarding by traders, government reduced the stock holding limits of recognised dealers and also made it obligatory for them to turnover their stocks within 10 days of receipt.

Sugarcane

In 1950-51, the base year of the First Five-Year Plan, the area under sugarcane was 17 lakh hectares and cane production was 699 lakh tonnes. However, having regard to the requirement of internal consumption of sugar, gur and khandsari, the target for cane production during the First Plan period was fixed at 462 lakh tonnes. Against this the actual production was much higher at 667 lakh tonnes. Again during the Second Plan period also the area and production of cane showed an increasing trend. In 1960-61, the final year of the Second Plan, 1105 lakh tonnes of cane was produced against the plan target of 793 lakh tonnes and the area under cane increased from 20.5 lakh hectares in 1955-56 to 24.1 lakh hectares in 1960-61. During the Third Plan, against a cane production target of 11.18 lakh tonnes from an expected area of 24 lakh hectares, the actual area and production of cane during the last year of Third Plan was 28.4 lakh hectares and 11.95 lakh tonnes respectively. Thus the Third Plan targets in respect of both area under sugarcane and sugarcane production were fully achieved.

Unfortunately, this rising trend of production received a serious set-back by unprecendented drought that followed in the subsequent two years. The area under cane was also diverted to high yielding varieties of food grains and as a result of this, the area under cane dwindled to 23.0 lakh hectares in 1966-67 and 20.5 lakh hectares in 1967-68. However, with the introduction of partial decontrol, the sugar factories within the limited flexibility allowed to them, paid much higher cane prices which restored the area under sugarcane.

For the Fourth Five-Year Plan, initially, it was proposed to produce about 1350 lakh tonnes of sugarcane from an area of 25 lakh hectares thereby giving an average yield of 54 tonnes per hectare. Subsequently the cane production target for the Fourth Five-Year Plan was revised to 1500 lakh tonnes whereas the target for the area was kept at the same figure i.e. 25 lakh hectares. Thus it was proposed to increase the average yield per hectare to a figure of 60 tonnes during the Fourth Five-Year Plan period by progressive extension of the application of modern technology for the cultivation of sugarcane.

To ensure accelerated cane development in the sugar factory areas during the Fifth Five-Year Plan period, the Union Government for the first time introduced a centrally sponsored scheme with a plan outlay of Rs. 8.02 crores. This scheme of sugarcane development was launched in 16 sugarcane growing States and two Union Territories during the Fifth Five-Year Plan commencing from 1975-76. The objectives of the scheme were to demonstrate the utility of proper development activities around the sugar factory areas for increasing the production of sugarcane. The development programmes included the following :—

(1) Quality seed production and its distribution for commercial cultivation.

(2) Demonstration of improved agricultural practices for plant and ratoon crops to overcome constraints obtaining in different regions.

(3) Training of Sugarcane Development Workers at State level.

(4) Assistance for timely plant protection measures and

(5) Construction of link roads around sugar factories.

Sugarcane Production Trends

With the introduction of partial decontrol in 1967-68, sugar factories paid higher cane prices in comparison to the minimum cane price fixed by the Government. The higher prices paid by the factories not only restored the area under cane, but had helped in achieving the highest level by 1969-70. This level of production could not be maintained as the area under cane declined sharply during the next two seasons 1970-71 and 1971-72 due to lower prices of gur at the time of sowing resulting in diversion from cane to other crops by rotation and lastly due to unfavourable weather conditions at the time of sowing and also during the growing period. The next two seasons 1972-73 and 1973-74 had shown progressive increases in the area under cane and its production.

The yield per hectare during the first three years of the Fifth Plan i.e. 1974-75, 1975-76 and 1976-77 showed a further increase of 49.9, 50.9 and 53.4 tonnes respectively. In 1977-78 the increasing trend was not only maintained but a record high yield of 56.2 tonnes per hectare was achieved. In 1978-79 the yield per hectare declined to 49.1 tonnes which further declined to 48.0 tonnes in 1979-80 due to unfavourable weather conditions and floods in the early part of the season. Though the cane yield per hectare over the period 1950-51 to 1979-80 showed an increase of about 27.1% it is still lower when compared to other important cane producing countries in the world.

In the period 1980 to 1983, area under sugarcane steadily increased. In the successive years 1980-81, 1981-82 and 1982-83, area under cane rose from 2.7 million hectares through 3.2 million hectares to 3.4 million hectares. For sugarcane crop weather does not matter as much as it does for other crops, as four-fifths of area under cane is irrigated. Area of sugarcane cultivation is principally determined by price paid for cane, which is influenced more by political than economic considerations. Thus, even in the drought year of 1982-83, there was a record crop of 189 million tonnes resulting in a market glut. This had been preceded by 182 million tonnes in 1981-82 which may also be termed as a huge harvest, considering that the average crop for the preceding four seasons was only 153 million tonnes. Production and growth rate in production of sugarcane are tabulated below :

TABLE 4

Production of Sugarcane in India

Year ending June	Production	Percentage change over previous year

Average	..	3.1	176	57.5

For the year 1984-85, a target of 215 million tonnes was contemplated by the Sixth Plan against the base of 175.8 million tonnes requiring a growth rate of 4.1 per cent. The additional production of about 40 million tonnes was planned to be achieved almost equally from an expanded area and a stepped up average yield. The average yield rate of sugarcane was 51.3 tonnes per hectare in the period 1974-80. In the first three years of the Sixth Plan, the average annual yield had risen to 57.5 tonnes per hectare. It must be noted however that the Sixth Plan envisaged an yield of 62 tonnes per hectare by 1984-85, which in the present difficult circumstances looks unlikely, especially in view of the fact that yield rate has dropped in the year 1983-84.

Measures suggested in the plan document for improving yield were provision of quality seed material, adequate supply of fertilizer especially in areas with assured irrigation and also suitable and timely plant protection measures. The plan programme also covered demonstration in the farmers' fields in respect of management of ratoons, better cultivation techniques etc. However the key factor affecting cane cultivation happens to be the incentive factor of getting assured returns, and its effect is more profound than improvements in techniques of cultivation. Thus Government policy in respect of pricing will be of crucial significance in stepping up sugarcane production in the country.

The key factor behind a prosperous sugar scenario is cane cultivation. It is necessary to maintain a steady stream of cane supply so that all the sugar factories can be operated as economically viable units. For this, area of cultivation must be protected from dwindling, and secondly the yield per hectare of sugarcane crop must be sustained at a high level. If good yield and good quality are to be assured (so that the mills may achieve a high recovery rate) cane must be grown under conditions conducive to an abundant and quality cane crop. In this country sugarcane is grown across a wide span of differing degrees of favourable and unfavourable climatic, environmental and agronomic conditions. In Northern India, cane quality is bad not only because the sugar content is low but also because of the high fibre content.

This is caused by weedy fields, inadequate manuring, lack of timely irrigation, drought and water-logging problems. It is well-known that the limiting factor to sugarcane growth is the lack of soil moisture during the vegetative growth period. When drought conditions are broken there is a resurgence of growth which draws on the sugar stored ; this remains unreplaced resulting ultimately in low sugar content.

Another factor which is detrimental to high yield and good quality is excess water in riverine areas and where water becomes stagnant for several months during the growing season. It is not uncommon in India to see sugarcane crop standing in stagnant water for 3-4 months especially when it is grown along with paddy. This is bad for sugarcane crop since it deprives the soil of oxygen and results in poisoning of the roots by aerobic by-products and ultimately killing functionable roots. Thus even if a good resistant breed of cane is produced, prolonged use of the same in such unfavourable conditions will make it a prey to the common disease.

Cane Prices

The fixation of the minimum price of sugarcane to be paid by sugar mills in the country is fixed by the Government. As far as possible the fixation of such support price is based on the recommendations of the Agricultural Prices Commission which is the Government's own agency to assess the cost of production of various agricultural commodities and their economic pricing. However, the price fixed by the Central Government is only a minimum support price and does not indicate the actual price paid by the mills for the sugarcane which will be much higher. The State Governments, in their bid to ensure that the incentive to grow cane does not wane, recommend higher prices. The differing prices of sugarcane in different states make for differences in the cost of production, which affect the economy of the mills. This gives rise to the phenomenon of sugarcane arrears which militate against the interests of the sugarcane growers and vitiate the very purpose of the State Governments in fixing higher cane prices. The situation quite often results in the Central Government making provisions to the states so as to enable the latter to advance loans to the sugar mills to clear their cane dues.

The Agricultural Prices Commission had recommended a minimum cane price of Rs. 16 per quintal, linked to a recovery of 8.5%. However, seven weeks after the start of the sugar season 1983-84, the Government announced a price of Rs. 13.50 per quintal of sugarcane linked to a recovery of 8.5 per cent. This was just 50 paise more than the support price of the previous season and was considered inadequate compensation for the rise in cost. However, since the price of levy sugar is computed on the basis of the support price of sugarcane announced by the Government, the Government is in a dilemma with reference to the fixing of cane price ; if the latter is high, the price of levy sugar distributed through the public distribution system will also be correspondingly high.

Sugar under the Seventh Plan

The Seventh Plan is now under formulation and will be commencing from the year 1984-85. A working group in which all interests are represented was set up by the Planning Commission make recommendations in respect of sugar indust The industry pleaded that no rigid view be tak on the basis of present consumption trends whi are influenced by extraneous factors. It w suggested that realistic assessments of demand made and these should be subjected to continuo review so that more appropriate targets of produ tion and capacity are evolved.

It is also felt that assessment of existing capaci is not being done satisfactorily. For instanc even though the rated capacity was only 65 la tonnes, we were able to produce 77 lakh tonn during 1981-82 and 1982-83. excluding the la part of the season and considering only t normal season. Again inspite of an increas assessed capacity of 67 lakh tonnes, output f the year 1983-84 was only around 59 lakh tonn Thus, there is need for a more scientific basis f assessment of capacity. Existing capacity h to be properly assessed before the finalisation Seventh Plan targets, so as to avoid installati of unwanted capacity. Knowledgeable circ feel that if the most relevant factor of producti capability given a normal crushing period taken properly into account, our present install capacity would be not less than 75 lakh tonne

The working group on sugar has set a target 234 million tonnes of sugarcane by the end of t Seventh Plan. According to the Group, th target of production is to be achieved by increasi the existing area to about 3-7 lakh hectares a by adopting inter-cropping, ratoon manageme plant protection, minor irrigation and developme of communication facilities like roads, culve and bridges. It has also been suggested th cane area be demarcated factory-wise statutori so that factories may not suffer for want of ca

A new pricing policy is to be initiated duri the Seventh Plan to avoid fluctuations in th area under sugarcane and to ensure adequa quantities of cane for vacuum pan sugar factori The pricing policy is to be evolved keeping view the integrated relationship of various swe tening agents viz. sugar, gur and khandsari, wh also giving due weightage to the fluctuations the demand for sugar.

The pricing policy for sugarcane is to aim at a level of production of sugarcane as well as sugar cost that can meet the market demand. Minimum cane price should be fixed so that it would act as minimum support price, and cover the cost of production of sugarcane. In order to avoid wide fluctuations in the area under sugarcane and to ensure adequate supply of sugarcane to vacuum pan sugar factories a scheme linking cane prices to the recovery of sugar may be devised.

The working group advocated the establishment of a properly sized buffer stock in order to sustain sugar prices in periods of glut or those of shortages. It is felt that a 3 month consumption requirement should constitute an adequate buffer size. The buffer already created would need augmentation to take it to the level of 15-20 lakh tonnes but the exact level would be determined by the quantity of internal consumption during the Seventh Plan priod.

Sugar Exports

India entered the world sugar market as an exporter in the year 1957 and 1.47 lakh tonnes of sugar was exported which earned about Rs. 11.89 crores worth of valuable foreign exchange for the country. During 1958, 1959 and 1960 the quantum of sugar exports went down. In 1961 sugar exports once again picked up. A quantity of about 2.68 lakh tonnes was exported to earn about Rs. 13.33 crores worth of foreign exchange. In the year 1967, due to fall in sugar production, the quantum of sugar exports was reduced to 2.17 lakh tonnes which fetched Rs. 14.74 crores worth of foreign exchange. During 1968 and 1969 sugar export was confined to the preferential quota of one lakh tonnes to U.K. and U.S.A. which earned a foreign exchange of Rs. 10.43 and Rs. 9.84 crores respectively.

With a record sugar production of 42.6 lakh tonnes in 1969-70 the sugar exports once again picked up in the year 1970. During 1970 and 1971, a quantity of 3.24 and 3.31 lakh tonnes was exported which earned a foreign exchange of Rs. 25.4 and 31.5 crores respectively. In the year 1973, initially it was decided by the Ministry of Agriculture and Irrigation to export the preferential quota of one lakh tonnes to UK. and U.S.A. However, due to increase in production during the later part of the year and the sharp rise in international sugar prices, Government had increased the export quota to 2.50 lakh tonnes which earned a foreign exchangn of Rs. 42.21 crores.

The industry for the first time in 1974 supplied about one lakh tonnes free sugar for export at negotiated price. The total exports in 1974 were of the order of 4.97 lakh tonnes and foreign exchange earnings were of the order of about Rs. 214.3 crores. In 1975 Government had earmarked 13.0 lakh tonnes for export comprising of 7.0 lakh tonnes of free sugar and the balance 6.0 lakh tonnes levy sugar. The industry had earned a foreign exchange of Rs. 475 crores including a rupee profit of Rs. 155 crores during the same period.

During 1976, the STC had purchased a quantity of 8.32 lakh tonnes comprising of 6.67 lakh tonnes of free sugar and 1.65 lakh tonnes levy sugar. Besides this a quantity of 1.39 lakh tonnes were carried forward from 1974-75 stocks, making a total of 9.71 lakh tonnes available for export in 1976. Of this, a total quantity of 8.43 lakh tonnes were shipped which earned a net foreign exchange of Rs. 208.58 crores, and the balance was carried over to the next year. The export of sugarcane came to a complete standstill during 1977. Besides a carry over of 1.28 lakh tonnes from the previous year, the STC purchased from the industry only 1.25 lakh tonnes of free sugar in March 1977. However, one redeeming feature of 1977 was the conclusion of the New International Sugar Agreement, under which India was assigned a basic quota of 8.25 lakh tonnes.

The New International Sugar Agreement (ISA) came into effect from 1st January 1978. The agreement stipulates regulation of prices within a range of 11 to 21 per lb. which is equivalent to Rs. 212 to Rs. 405 per quintal. These prices are sought to be maintained in this range by two measures, namely quota reduction and holding of minimum stock by exporting countries. Further more, for the first time a provision has been made for establishing a sugar stock fund to meet the carrying cost of the minimum stocks.

Sugar prices generally ruled at low levels in the International Market during 1978. Exports were confined only to the quota of 6.5 lakh tonnes comprising of 6.25 lakh tonnes under ISA and 25000 tonnes under EEC quota. The actual shipment was 6.36 lakh tonnes. The total foreign exchange earned during the year amounted to Rs. 116.56 crores.

The economic provisions of the International Sugar Agreement 1977 remained inoperative due to the high prices of sugar in the International Sugar Markets. Because of a steep fall in the domestic production, sugar exports were restricted to 62,792 tonnes up to 15th April 1980 which earned a foreign exchange of Rs. 26.03 crores. As the sugar production and thte total availability of sugar during the season 1979-80 was low and not even adequate to meet the domestic requirements, the country, after exporting a nominal quantity had to resort to import of sugar. A total quantity of 1.81 lakh tonnes were imported during the year 1979-80.

The International Sugar Organisation (ISO) halved India's export quota for 1982. The plea made by the Government of India to International Sugar Organistion to grant an export quota of at least seven lakh tonnes for the calendar year 1982 was turned down on account of its inability to fulfil the quotas released for it in 1980 and 1981. As against an allotment of 7.8 lakh tonnes in 1980 and 7.3 lakh tonnes in 1981, India could hardly export 60,000 and 80,000 tonnes in 1980 and 1981. This is because of the poor cane crop and low output. In fact, India had to import 1.8 lakh tonnes and 2.15 lakh tonnes in 1980 and 1981 respectively.

Exports were stepped up in 1983. India not only fulfilled its export quota for that year under the I.S.A. but marginally exceeded it. Export quota has now been fixed at 6.5 lakh tonnes. Even though production for the year ending September 1984 has fallen short, the government intends fulfilling this export quota. Schemes for importing sugar for re-export have been designed—the strategy is aimed at retaining the markets abroad for Indian sugar.

The Central Government has finalised contracts for the import of about 3.54 lakh tonnes of sugarl up to October 1984. Of this, 1.25 lakh tonnes of sugar was to arrive before the close of the sugar year ending 30th September 1984. This is for the first time that the country is going in for import of sugar for purposes of re-export. The design is to buy the commodity in foreign markets when prices are low and export the same when prices in the international market go up.

The strategy is said to be based on the Cuban operations. A large producer of sugar, Cuba exports 2.5 million (25 lakh) tonnes of sugar annually while importing one million tonnes and exporting whenever it is feasible taking advantage of global price trends. The State Trading Corporation has been entrusted with the import-export operations.

Problems

The worst handicap crippling the industry is the low level of productivity. This is attributed to inadequate irrigation facilities, untimely supply of quality seeds etc. The erratic trend in the production of sugar is attributed to the fact that it is an agro-based industry and its output fluctuates with the vagaries of monsoons. Secondly, the output of cane is influenced to a great extent by the prices of sugarcane—industry's main raw material—which in turn depends upon the prices of competitive food crops on the one hand and the cane prices fixed by the Government on the other. Besides Government policy, the output of sugar is greatly influenced by the relationship between cane prices and gur prices. From the production side, sugarcane can be used for the manufacture fo sugar or gur. From the consumption side, the substitution of sugar in the place of gur arises when the prices of sugar fall in relation to gur prices.

Uttar Pradesh and Bihar together accounted for about 60 per cent of sugar production. Analytical studies about production costs revealed the irrational nature of the regional pattern of production. Since the sucrose content of sugarcane begins to deteriorate soon after the stalks have been cut, it is essential that unit must be located in close proximity to the sources of raw material. Consequently, attempts were made to locate new units in the cane producing states.

Of late, the co-operative sector has been ncreasing in importance in sugar industry. During 1977-78 the co-operative sugar factories produced 31.7 lakh tonnes of sugar which was 49 per cent of the total production during the year. Co-operative sugar mills have two positive advantages in their favour. Firstly, they get the maximum supply of sugarcane as almost all the sugarcane farmers are members of the co-operative sugar mill. Secondly, profits of the co-operatives are distributed among farmers instead of going into the hands of a few ' sugar barons '.

One factor which is of crucial importance to the growth of sugar industry is the yield of sugarcane per acre. Percentage recovery of sucrose is the second factor which determines the production. In India, both the yield of sugarcane per acre and percentage recovery of sucrose is low. There is a possibility of doubling or even trebling the yield of sugarcane.

In India, from 100 tonnes of cane 10 tonnes of sugar are produced, but in case of Khandsari only 7 tonnes of sugar is derived. Thus, there is a net loss to the country by the use of cane for khandsari and gur. The recovery content of gur is only 5 per cent. But since it is a food of higher nutritive value, the demand for gur is not only motivated by its use as sweetening agent, but as an article with specificity in its demand. But the gur factories deprive the community by 25 to 40 per cent of sucrose when they divert the cane required by sugar mills. While the price of sugarcane supplied to the factories is fixed by the Government, there is no price fixation for sugarcane used for gur. The obvious result is that production of gur often increases at the cost of sugar. As a result of the policy of price fixation alone, the distribution of sugarcane among the products of sugar, gur and khandsari is not done on a fair basis. It is therefore necessary that price competition among sugar, gur and khandsari be avoided. It would be more desirable to chalk out a combined allocation policy of sugarcane for these three close substitutes at the same price.

The sugar policy of the Government, has been seriously lacking a long term perspective. Controls, decontrol, partial controls, etc. have been used in the past in an ad hoc manner where as it may be unwise to argue for a complete decontrol of sugar in times of scarcity. It would be advisable that the Government uses partial control as a permanent mechanism so as to assure supplies of sugar to poorer sections at reasonable rate. Government policies on cane prices, control of price of sugar, dual pricing etc. have been designed and used for the benefit of the consumers. Much of the illness and problems of the sugar industry are the result of Government's policy.

The low yield of sugarcane, short crushing season, unsatisfactory location of the industry in U.P. and Bihar and inadequate supply of cane,—create problems of production of sugar in India. Besides, Indian sugar factories have low milling efficiency and recovery of sugar from sugarcane is very low. One reason for this is the uneconomic character of many of the sugar mills. Further, Indian sugar mills do not have sugar plantations of their own (as in the case of West Indies) and hence, do not have control over the quantity and quality of sugarcane supplied by innumerable cane growers.

The inefficiency and uneconomic nature of production in sugar mills, low yield and short crushing season, the high price of sugarcane and the heavy excise duties levied by the Government—are all responsible for the high cost of production of sugar in India. The price of Indian sugar is considerably higher than the world price of sugar. Apart from the manipulations of stocks by sugar factories, hoarding, speculation and black marketing of sugar by wholesale dealers are rampant in India.

Sugar industry in India is plagued by cyclical fluctuations of excesses and shortages in production. There are two fundamental causal factors behind this : First is the normal law of economics of demand and supply. In times of scarcity, prices of sugar, gur and khandsari tend to rise, inducing farmers to increase the area under sugarcane. This massive shift causes a glut situation resulting in a price slump and a shift of land away from cane. Thus cyclical fluctuations are perpetuated.

The second is the extraneous factor of policy operations which lack consistency. Prices for cane are often fixed by State Governments at very high levels thereby indirectly encouraging farmers to produce more cane. Sugar prices on the other hand are maintained at levels well below the economic price line, so that their sales realisation is inadequate to meet the high cane cost, leading to huge arrears in payment to the growers. This gradually results in a cut back in the planting of sugarcane and eventually in sugar production.

Though cyclical fluctuations are unavoidable to an extent, realistic, consistent and pragmatic policies can certainly minimise violent ups and downs and smoothen out the peaks and troughs considerably. The present approach helps neither the growers of cane nor the manufacturers of sugar. Had the sugarcane prices been realistic there would have been no cane price arrears and the output would not fall steeply as had been the case in the present sugar year.

It is important that the industry is in a position to maintain prompt and regular cane payments. The activity of the industry to pay will depend on the fixation of economic and realistic cane prices on the one hand, and appropriate levy prices and maintenance of reasonable free market prices for sugar on the other hand.

Technology

The level of technology in the Indian sugar industry is quite high and a number of developing countries have borrowed Indian sugar technology. Unfortunately, however many of India's factories had been set up in the early thirties and had become uneconomic. For these, the need of the hour is modernization, rehabilitation and expansion. Attention also needs to be paid to cane development.

The Union Government has recently raised the standard specification for new factories not only by raising installed capactiy from 1250 TCD to 1500 TCD, but also by incorporating all the technological developments already being adopted by some units in the country. From the sugar season 1984-85, the industry would manufacture sugar according to the new specifications with only 3 grain sizes — large, medium and small.

More profitable utilization of by-products is another avenue that requires attention. Manufacture of paper and newsprint from bagasse and alcohol from molasses would also enable the factories to recover the cost of conversion of cane into sugar. By better channelisation of by-products the industry would be able to make sugar available to the consumer at a much lower price.

Research

Sugarcane Breeding Institute, Coimbatore and Indian Institute of Sugarcane Research (IISR), Lucknow, are engaged in the development of high yielding varieties of sugarcane, depending upon the agro-climatic conditions of the various regions of the country. It has been established that the recovery of sugar can also be increased by harvesting cane on maturity basis. The National Sugar Institute (NSI) Kanpur and the Deccan Sugar Institute, Pune, are engaged in rendering consultancy services to the sugar factories and allied undertakings. Besides these, there are a large number of institutes and consultancy services available in the country.

Research on sugar crops in the country are also being conducted by the Indian Council of Agricultural Research Institutes, Agricultural Universities and State Departments of Agriculture. In an effort to co-ordinate research activities to achieve a common goal, the Indian Council of Agricultural Research has launched All India Co-ordinated Research Project on sugarbeet, and also on foundation seed programme for sugarcane. The pilot project centres of this scheme are being run in principal sugarcane growing states of North India viz. Punjab, Haryana, U.P., Bihar, West Bengal, M.P. and Maharashtra. The overall objective behind these researches is to produce more in lesser time and space, besides giving longer lease of life to sugarcane varieties by exploiting their genetic potential in more favourable environments than those in existence at present. The institute caters to information enquiries of various types pertaining to technical and advisory matters by Central and State Governments, industry, private institutions and individuals.

National Sugar Institute, Kanpur conducts courses in sugar technology, besides other agricultural universities which have this as a subsidiary subject. Research work is also carried on at the Indian Institute of Sugarcane Research at Coimbatore (TN) and Lucknow (UP). Deccan Sugar Institute near Naigaon in Maharashtra is being set up at the cost of Rs. 10 crores to provide technical expertise to the sugar industry. The sugar industry gives practical training facilites to students of sugar technology and also imparts training to a number of apprentices as required under the Apprentices Act.

The Indian Sugar Mills Association was formed to promote the interests of the sugar mills and works to optimise results of their functioning. It makes representations and recommendations to the Government and acts as spokesman of the industry. It brings out several publications including India Sugar Year Book and 'Indian Sugar', a monthly magazine.

National Federation of Co-operative Sugar Factories Ltd., New Delhi, was set up in December 1960 with the object of co-ordinating and facilitating the working of co-operative sugar factories, state and zonal federations and to assist in the promotion of new co-operative sugar factories.

It is felt in many quarters that the research conducted at the Central Institute of Sugarcane Research, Lucknow, cannot be made completely applicable in the Southern States. It is therefore necessary that the Government of India should establish a Central Sugarcane Research Institute in the South to undertake high quality research of a fundamental nature. Such a Central Institute can also conduct research on specific problems which cannot be carried out by the State Sugarcane Research Stations which can ill-afford sophisticated equipment and other facilities.

Some folier and crop-logging work has been attempted in some of the research stations in India, but the work has not reached a stage that could be put into practice on the cane fields. Considering the excellent results that such work has yielded in Hawaii and other countries, India too should start a Central Crop Control Laboratory for sugarcane providing all the important facilities and highly trained research expertise. Experts from these institutes dealing in different disciplines like agronomy, analytical chemistry horticulture, soil and bio-chemistry, statistics etc can be deputed to nations where advanced research work has been done in order to make a deep study and get sufficient training in techniques of biochemical control. On their return, these experts would be able to develop similar systems for our sugarcane crop by developing indigenously suitable folier and moisture indices as also standardise the necessary methods, instrumentattion and other techniques. State research stations could then send their research officers to undergo training in this system for translation of the same in their respective states on sugar factory areas. This step is urgent, for inspite of long years of research, we still lag behind in improving methods for systematic growth and ripening control in sugarcane.

It must be mentioned that excellent work has been done in the country in respect of sugarcane breeding; varieties evolved here have travelled beyond the frontiers of the country. Good work regarding maintenance of sugarcane germplasm is being done at the National Sugarcane Breeding Institute. However, the problem still unresolved is that early ripening varieties of sugarcane are generally low in their yield potential as compared to late maturing varieties. The Coimbatore institute is constantly trying its level best to combine these two major attributes. At this stage a new direction needs to be given to the breeding technique adopted at Coimbatore in order to achieve a combination of high yield and early maturity.

Sugar Research Abroad

With the advancement achieved in the sciences of genetic engineering and genetransplantation, including genesplicing, it is expected that genetically engineered varieties will be emerging by the late eighties. Countries such as the USA and Mexico have carried out a lot of work in these fields. It is suggested that some of our highly qualified plant breeders and research staff be deputed to these countries to make detailed on-the-spot studies of geneplantation techniques which may be useful to us in solving the perennial problem of combining high yield and early maturity. If the genes controlling these characteristics are identified, a detailed study will help in the adoption of latest techniques to achieve the hitherto elusive breakthrough.

A lot of relevant research work has been carried out in Hawaii, Australia and Mauritius on various aspects of sugarcane cultivation. India can benefit from the results of such out standing work already done elsewhere in the world. Excellent research work has been done as early as 1955 on the fertilisation of sugarcane crop, soil moisture control, plant moisture control and a complete control over the growth and ripening of sugarcane. A system of crop logging has been developed in Hawaii, whereby, by the use of bio-chemical control and plant indices, the sugarcane crop is made to ripen almost at will for carrying out crushing operations. By means of such complete bio-chemical control over the cane crop, it has been possible to achieve very high cane yeld on the fields and impressive sugar recovery at the factories. Our country can do well to examine the achievements of these countries, send a panel of sugarcane experts, make detailed studies, have discussions, obtain material and take steps for the immediate adoption of such techniques as maybe useful for improving our own crop yield and quality.

Policy

Sugar policy as it exists in India over the last two decades has been characterized generally by dual pricing, punctuated by intermittent phases of reversal of policy. The dual pricing system allows a free market to exist along with a public distribution network. In the free market, supply and demand equilibrium is allowed to establish a market clearing price, while pre-determined quantities of sugar are made available to consumers through outlets of the official distribution network at fixed prices. However the free market is not free in the real sense, since supply is not determined by market forces but by quotas set up by the Government. In practice, these quotas are dictated more by the necessities of maintaining high prices and bear little relation to the level of output or stocks with the mills.

Policy makers have to steer a middle cours between the demands of various interest groups The cane growers demand for clearance of can price arrears pending with mills and would wan pressure on mills to continue crushing operations so that all cane grown in the fields could b sold off. The mills on the other hand demand concessional credit to finance their accumulated stocks as also for the creation of a buffer stock of bigger size and an export subsidy to make exports feasible. These demands are basically short-term in nature and policies framed are also tuned towards solutions for short run problems. In fact, it has been argued in certain quarters that the periodic crises in which the industry finds itself is in a basic sense the result of such ad hoc formulations of policies which address themselves primarily to short-run considerations and resulting in cumulative crises in the long run.

At present quota releases or regulation of quantity supplied is used as the lever for operating the price mechanism. Prices are thus determined by the policy of altering market supply. Opinion in the industry circles however is that output restriction is not a desirable option for the sugar industry. Short term remedies are provided, largely accommodating the interests of sugar mills and urban consumers, while those of the cane growers are provided a sop. The allocation between sugar and inferior substitutes is not integrated into this to form a complete scheme.

The resolution of the present dichotomy of short-run solutions and cumulative long-run problems requires a carefully evolved and skillfully implemented integrated perspective policy for the sugar industry. Buffer-stock operation from a sizeable stock should be used not only to iron out fluctuations in domestic availability and prices, but also to maintain a steady level of exports, It is very important that the buffer stock is sizeable, as otherwise it will not be possible to check speculation and cyclical price fluctuations.

More substantially, such a policy of allowing prices to decrease would cause the average prices of sugar to stabilise at lower levels. This, through reduction in ' diversion ' would cause the average availability of sweeteners to increase. It would then further stabilize sugar prices at lower levels leading to mutual reinforcement of the various trends. The policy would also result in a reduction in the cost of buffer stock operations. Buffer stocks could then be accumulated at the lower prices prevailing in good crop years and sold in the free market, or through a public distribution in poor crop years. The buffer stock operations would become self-supporting and even the industry might be found willing under these conditions to hold the stocks at its own expense.

In this context, it would be well to remember that sugar mills compete for their supplies with gur and khandsari growers and this would always provide a floor so that prices would not go below that level. With the spectre of accumulating stocks removed, mills in low cost areas may grow or increase capacity at a faster rate than at present. This would remove the problems of cane growers who do not even find purchasers in good crop years. Further, with a greater stability in the prices of sugar the cane grower may also be able to overcome the present uncertainties with regard to his revenue.

Working out projections for 2000 A.D. experts have suggested that the level of production of sugarcane should be doubled to around 300 million tonnes and the yield raised to 70.26 tonnes of cane per hectare. At the present juncture, consumption of sugar in the country is rapidly growing and unlike in the past decades, the rural population is turning more and more sugar-minded. It must therefore be stressed that the complacent tendency on the part of the Government that they have adequate stocks to meet next years sugar requirements is indeed a short-sighted visualisation. The hazards in cane cultivation make it very difficult to predict when production level would take a sudden dip ; the high costs of inputs and low yield of cane would make the cane grower demand higher and higher prices or alternatively, reduce the area under cane.

In certain sugar belts, the functioning of co-operative sugar factories is not entirely satisfactory and the attitude of cane grower in these areas may lead to an eventual decline in area under sugarcane crop. It is therefore essential that our planners formulate an integrated policy of sugar research, cane development and pricing. A long term policy should be evolved in which cane yield and quality must be the supreme criteria for focusing attention. Cane research techniques should be modernised and steps taken for the adoption of latest cultivation techniques. Since cane development programmes and techniques in this country are at a low ebb at present, immediate measures have to be evolved to make them more purposeful, practically effective and result-oriented. It is also essential that a pragmatic price policy is adopted by the Bureau of Industrial Costs and Prices so that the uncertainty in sugar production from year to year is avoided and its sustained growth is assured. Such an approach is essential not only to bring qualitative and quantitative improvements to cane and sugar but also to stabilise the sugar industry and pave the way for its healthy development.

THE ANDHRA SUGARS LTD.

ESTABLISHED in 1947. **Directors :** Mullapudi Harischandra Prasad (*Chairman and Managing Director*), B. B. Ramaiah (*Managing Director*), P. Narendranath Choudary (*Joint Managing Director*), M. Thimmaraja (*Joint Managing Director*), M. Venkatarayudu, V. K. D. V. Satyanarayana Raju, M. A. Krishnamachari, H. R. Sayoji Rao, C. S. Vidyasankar, K. Jagannathan (ICICI *Nominee*), K. G. Appusamy, P. Atchutaramayya (*Executive Director*), M. Narendranath and S. S. B trabet. **Secretary :** M. Bulli Abbayi. **Registered Office:** Venkatarayapuram, Mandapaka Limits (Tanuku)—534 125, W.G. Dt. (A.P.). Telegrams : 'SUGARS'. Telephones : 333 (5 lines). Telex : RY-0492-242. **Auditors :** Messrs. Brahmayya & Co.

Objects and Activities : It manufactures sugar by double sulphitation process. Cane crushing capacity : 5000 tonnes per day. Also manufactures industrial alcohol, acetic acid, acetic anhydride, ethyl acetate etc. The works are at Tanuku.

At Kovvur it manufactures caustic soda with a capacity of 36,300 M.T. per annum, sulphuric acid and superphosphate.

Industrial licences have been received for the manufacture of boiling house equipment of 1000 tonnes per annum, potassium hydroxide of 5000 tonnes per annum. Letter of intent for the expansion of chlorosulphuric acid plant from 5000 to 10,000 tonnes per annum and also to expand the production capacity of the existing industrial alcohol plant from 8 lakh gallons to 16 lakh gallons per annum have also been received.

CAPITAL : Authorised : Rs. 10,00,00,000 in 87,50,000 Equity shares of Rs. 10 each 30,000—9.5 per cent first Cumulative Redeemable Preference shares of Rs. 100 each and 95,000—9.5 per cent Second Cumulative Redeemable Preference shares of Rs. 100 each. **Issued, Subscribed and Paid-up :** Rs. 6,12,23,000 in 55,22,275 Equity shares of Rs. 10 each, 30,000—9.5 per cent First Cumulative Redeemable Preference shares of Rs. 100 each, 30,000—9.5 per cent Second Cumulative Redeemable Preference shares of Rs. 100 each.

Date of Accounts : 30th September.

Dividend declared : 1984—15 per cent, 1983—18 per cent, 1982—16 per cent, 1981—25 per cent, 1980—15 per cent.

Messrs. Hindustan Allied Chemicals Ltd. and Messrs. Andhra Farm Chemicals Corporation Ltd. are the subsidiaries.

THE K. C. P. LTD.

INCORPORATED in 1941. **Directors :** B. Ramalingeswara Rao, V. L. Dutt (*Chairman & Managing Director*), C. C. Ganapathy, U. Joga Rao (IDBI *Nominee*), M. A. Krishnamachari, P. Koteswara Rao, R. Prabhu, S. R. K. Prasad, P. R. Ramakrishnan, R. Ramananda Rao, D. S. Reddy, V. Veerabhadra Rao. **Secretary :** K. Raju. **Registered Office :** Ramakrishna Buildings, 183, Mount Road, Madras-600 006. Telephone : 89441/2. Telex : 041375. Telegram : 'KECEPE'. **Auditors :** Messrs. Brahmayya & Co.

Objects and Activities : The company manufactures sugar, industrial alcohol and cement. The company also has an engineering unit licensed to fabricate machinery for sugar and cement plants, steel castings, water tube boilers, gears and pinions, lime and dolomite plants for steel mills, heavy plate working machinery, filtration equipment etc. The sugar plant is at Vuyyuru near Vijayawada, the cement plant is at Macherla and the engineering unit is located at Tiruvottiyur near Madras.

Capacity	*Licensed*	*Installed*
Sugar (Cane crushing tod)	6,000	6,000
Industrial alcohol (Barrels of new spirit per day)	25,000	20,000
Cement (tpa) ..	2,54,000	2,54,000
Sugar machinery (Plants of 1250-3500 tonnes capacity) ..	4	4
Cement machinery (Plants upto 3000 tonnes capacity) ..	2	2
Steel castings, ingots & iron castings (tonnes) ..	5,000	5,000
Reduction gears & Pinions, Other gears & gear boxes (tonnes) ..	600	600
Water tube boilers ..	6	6
Continuous sugar centrifugals ..	50	50
Chilled rolls (tonnes) ..	1,200	1,200
Machine tools, brake presses, shears, bending machines (Nos.) ..	10	10
Rubber machinery (tonnes)	303	303

Letter of Intent has been received for the manufacture of 4,00,000 tonnes of cement per annum. The company has contract for setting up of a sugar plant and a distillery for the Sri Lanka Sugar Corporation, Colombo.

The company proposes to establish a new company to be named Fuller KCP Ltd., an Indo-American joint venture with Messrs. Fuller International Inc. USA in Gummidipoondi, for engineering works and execution of projects. The company also proposes to establish an alloy iron foundry unit in Pasham Manilaram in Medak District of Andhra Pradesh and a paper plant of 30 tpd, at Vuyyuru.

Sakthi Sugars Limited

A PACE SETTER FOR RURAL PROSPERITY

- SAKTHI SUGARS have emerged as the First in the country to have handled over one core tonnes of sugarcane and converted the same into superior quality white crystal sugar within nineteen years of its inception.

- SAKTHI SUGARS have engineered a breakthrough in sugarcane production with innovative technology and the farmers have achieved a successive increase in yield of sugarcane to 45 tonnes from 28 tonnes to earn an additional income of Rs. 3,000 per acre.

- SAKTHI SUGARS have enriched the springs of rural life by distributing over Rs. 20 crores as sugarcane price annually to over ten thousand farmers (a bulk of whom are small and marginal farmers) and generating gainful rural employment to over fifty thousand families in the primary, secondary and tertiary sectors.

- SAKTHI SUGARS have promoted a number of rural development Programmes. (i) Sakthi High School provides a conducive environment for study and development of rural children, (ii) Sakthi Institute of Technology promotes the technical skill of the youth and (iii) V. M. Kailasam Hospital provides medical care for the region.

- SAKTHI SUGARS have established a modern foundry for producing superior quality S. G. / Grey Iron castings for automobile industry in the country.

- SAKTHI SUGARS spread sweetness to millions of homes with her superior quality white crystal sugar. Sakthi Sugars stand poised for greater strides in the years to come.

TEXTILE INDUSTRY

THE Indian textile industry is today at the crossroads having reached a stage where a definite decision will have to be taken about the direction in which its future development should proceed. The industry is facing numerous problems, and among them the most important ones are those of liquidity for many organised sector units, demand recession and insufficient price realisation. The long range problems include the need for sufficient modernisation and restructuring of the entire industry to cater more effectively to the demands of the domestic and foreign markets for textiles as per the needs of today and tomorrow. The time has come to consider whether the vertical integration which this industry has achieved in the composite organised sector should now be discarded in favour of the horizontal pattern with the spinning, weaving and converting activities made separate, which seems to be better suited to the socio-economic conditions prevailing in India.

Cotton

The orgin of the cotton textile industry, the largest single industry in the country dates back to 1818 when the first cotton mill was established at Fort Gloster near Calcutta. The grant of protection by the Government and the Swadeshi movement enabled the industry to make rapid strides. The industry reached the heights of prosperity during the Second World War when the supply of Japanese cloth totally stopped and large orders came from allied armies. The partition of India and the Indo-Pakistan trade deadlock after devaluation of the Indian Rupee in September 1949, made the supply position of raw cotton extremely difficult and many mills had to close down temporarily. Later on, both imports and domestic supply of raw cotton was stepped up and cloth production increased considerably. This improved situation helped the government to abolish control of cloth in July 1953.

In India, cotton has had a pride of place among cash crops from the earliest times. At present, the area under cotton crop is over 8 million hectares. In respect of the acreage, India occupies the foremost position among the cotton growing countries. As regards production, however, it has the third place, the first two being taken by the U.S.A. and U.S.S.R. Total value of raw cotton produced in the country amounts to as much as Rs. 2500 crores. During the period from 1964-65 to 1982-83 the cotton yield per hectare has recorded only a slight improvement which is inadequate to meet the growing fibre requirement in the face of more or less stagnant total area under cotton cultivation. In 1964-65, the area under cotton cultivation was 8.37 million hectares and the yield per hectare was 123 kgs giving a crop of about 60.11 lakh bales of cotton. The population at that time being 479 million, the per capita availability of cotton came to 2.13 kg. Twenty years later, the area under cotton stands reduced to 8.07 million hectares, while the yield increased to 162 kg. per hectare yielding a cotton production of 77.20 lakh bales. The population now being 715 million, the per capita availability of cotton came down to 1.84 kg. With the population expected to go up to 790 million by 1988-89 and in view of the severe pressure on cultivable land, it is feared that, India will face a shortage of 2.44 lakh tonnes (14.34 lakh bales) by the end of the Seventh Plan.

TABLE 1

Area, Production and Yield per hectare of Cotton

Year	Area under cultivation (in million hectare)	Production (in lakh bales of 170 each)	Yield per hectare (in kgs)
1964-65	8.37	60.11	123
1969-70	7.73	55.64	122
1974-75	7.66	71.56	161
1979-80	8.13	76.48	160
1980-81	7.82	70.10	152
1981-82	7.99	78.26	167
1982-83	8.07	77.20	162

From the Table 2 given below, it is evident that during the last three decades 1951-81, the growth of looms, cloth production and employment have been very much lower than the growth of the number of mills, spindles, cotton consumption and yarn production. The imbalance between yarn and cloth production, arising out of both policies and operations, is striking. The employment growth rate has been less than 0.7 per cent per annum.

TABLE 2

Cotton Textile Mills in India

S.No.	Item	1951	1981	Percentage increase in 1981 over 1951
1.	No. of Spinning Mills	103	400	288.3
2.	No. of Composite Mills	275	291	5.8
	Total No. of Mills	**378**	**691**	**82.8**
3.	Installed Spindles (million)	11.00	21.08	91.6
4.	Installed Looms (thousands)	194.57	207.66	6.7
5.	Average Daily Employment (lakhs)	7.15	8.81	23.2
6.	Cotton Consumption (million bales of 170 kg each)	3.69	7.60	106.2
7.	Yarn Production (million kg)	561.43	1058.00	88.4

Source : Economic Times, 2nd June 1984.

The crop prospects in most of the cotton producing countries are far from satisfactory this year. The crop in the Soviet Union is reported to have been damaged noticeably this year and it is expected to enter the world market shortly for bridging the gap between its domestic production and the country's requirements. The production of cotton in Uganda, Sudan and Turkey also declined in 1984. Even China and the U.S.A. the largest producers of cotton registered a marginal fall. The overall global production was thus substantially lower this year. It is estimated, that the total production for 1984-85 will be more than 66 million bales, while the requirement will exceed 70 million bales resulting in a shortfall of at least 4 million bales.

Man-made Fibres

Traditionally, the thrust of India's textile policy as well as the response of a major part of the textile industry has been governed, at least till the Mid-Seventies, by a tacit acceptance of the dominance of cotton as the prime raw material for textiles. A long standing habit of reliance on cotton, the interest of domestic producers of both raw cotton and cotton textiles, lack of indigeneous raw materials for synthetic fibres etc., are the factors which have induced the Government to protect India from the world-wide tendency of rapid substitution of cotton, based on significant advances in the technologies for producing man-made fibres. But, despite this, the consumers have responded favourably to man-made fibres and, within a passage of time, the market for substitute fibre fabrics has enlarged considerably resulting in a palpable structural shift in the pattern of demand. The share of cotton fibre in the total fibre consumption, declined to about 80 per cent from a high of 92 per cent in the early Seventies.

The shift in the demand, in favour of man-made fibres, has occurred principally as a result of certain advantages which these fabrics have over cotton. These advantages are derived from the greater durability, easy care, and the elegance of the man-made fibre fabrics. For consumers, these properties have a high value. Durability and easy care properties of man-made fabrics give to the consumer the same apparel comfort with a much smaller wardrobe, which compensates him for their higher price. It should not be forgotten that, but for man-made fibre fabrics, the rising demand for cloth, could not have been met.

Among the man-made fibres there are two broad categories namely, cellulosics (e.g. viscose) and synthetics both of which have certain advantages over each other in terms of clothing comfort, prices, durability and raw material base. Synthetic fibres are more durable and have easy care properties, but their raw material base is petroleum which is a non-renewable resource and hence its future supply is uncertain. Viscose fibre, on the other hand, is derived from forest products which, are renewable resources and hence their future supply is not so uncertain. In terms of clothing comfort in a tropical environment, viscose fibre compares favourably with cotton, but in terms of durability and easy-care property, it is inferior to synthetics. Of late, a new blend of fibre viz. polyster-viscose has become popular as it is claimed to combine the best of both the fibres.

A major quantity of viscose fibre has all along been consumed by the decentralised sector in various parts of the country for the production of pure viscose fibre fabrics such as lungies, dhoties, sarees, bed sheets, etc. The smooth silky and clean finish of such fabrics make them popular among vulnerable sections of the society. These fabrics have a nice feel, good drape and are soft to handle and people in the lower income group are satisfied to a great extent, on using them.

There are three plants producing viscose staple fibre in the country and are located in Madhya Pradesh, Kerala and Tamil Nadu. Two plants are in operation and one is closed due to labour problems. In 1981, the production of viscose staple fibre was 85000 tonnes but in 1982 it had declined to 49000 tonnes because the landed cost of import viscose was less than the indigenous price. In 1983, the production went up to 64000 tonnes and in the first four months of 1984, production has been around 31000 tonnes. Viscose staple fibre is imported under Open General Licence and in 1983, 48000 tonnes were imported as against 69000 tonnes and 53000 tonnes in 1981 and 1982 respectively. During the first five months of 1984, a total of 4000 tonnes were imported. Viscose is imported from Japan, South Korea Taiwan and West Europe. The Government has been taking a number of measures for the production of acceptable quality cloth at reasonable prices. It has reduced the basic customs duty from 40 per cent to 25 per cent ad valorem on viscose staple fibre to ensure adequate availability of raw material to the textile industry at reasonable prices. This reduction will especially benefit the decentralised handloom sector which utilises almost 90 per cent of the viscose staple fibre spun yarn.

Viscose fibre exhibits the valuable blending property with other man-made and natural fibres. Fabrics manufactured out of polyester-viscose blends are now becoming the most sought after fabrics by various sections of society due to their long lasting qualities. However, consumers prefer polyester-viscose blended fabrics to polyester-cotton blended fabrics. This is because polyester-viscose blended fabrics is a perceptibly improved variety over the polyester-cotton blended fabrics in terms of, high comfort, better drape and fall, higher crease recovery, aesthetic value and free from streaky characteristics, endemic to polyester-cotton blends. Besides, the manufacturing process of polyester-viscose blends is much simpler than polyester-cotton blends. The increasing use of viscose in blends with polyester is a welcome trend in the perspective of cotton shortage in our country.

TABLE 3

Production of Polyester-cotton and Polyester-viscose blended Yarn during 1978-82

Source : Economic Times, 14th October 1984.

The indigenous polyester fibre industry has witnessed a sharp rise in its production and sales during the current year, after several years of virtual stagnancy. The change in the fortunes of the industry has been brought about by the 1984 budget which has given certain tax concessions to blended yarn and fabrics in particular. As a sequel, several textile mills which were already producing blended fabrics have stepped up their output, while several others have entered this field. Sales of indigenous polyester fibre for the first two months of 1984-85 have shown an impressive rise of over 75 per cent at 6583 tonnes against 3693 tonnes for the same period of the previous year. Likewise, production by the domestic industry for the first two months of 1983-84 has more than doubled at 5336 tonnes against 2569 tonnes during the same period of the previous year. At this rate, the demand for indigenous polyester fibre is estimated to touch a peak level of 40000 tonnes for the first time in the history of this industry. In the past, the average annual consumption of polyester fibre in the country was around 32000 tonnes and since a substantial part of this demand was met through imports, indigenous production used to remain virtually stagnant around 28000 tonnes. Even when the industry had an installed capacity of about 38000 tonnes, a substantial part of it remained idle. Foreign suppliers continued to dump their material into the domestic market. Indigenous production in 1982 was around 28100 while imports amounted to 4600 tonnes. In the following year imports were allowed to soar to 10,400 tonnes with the result that domestic production fell to 25000 tonnes. Such a situation continued during the past several years. It is for the first time now that the indigenous industry is expected to raise its production to 40000 tonnes and also sell that much quantity in view of the sudden improvement in demand. Thus there are good prospects for the growth of the polyester fibre industry in the country provided, the government gradually brings down the crippling excise burden on this fibre and the raw materials for this industry are made available to it at steady prices.

In the early Sixties, synthetic fibres, mainly nylon and polyester were introduced to the textile industry. For several years, these were treated as exclusive material available to an exclusive sector of the population. However, by 1971 the proportion of cloth manufactured from synthetic fibre and filament had reached a level of 9 per cent of the cloth manufactured by the organised and decentralised sector. The Seventies saw a continuous rise in the proportion of cloth made out of synthetic fibre and filament and the production of 1982 included as much as 23 per cent cloth manufactured out of synthetic fibre and filament. Blended and synthetic filament fabrics have a useful life of atleast five times that of cotton fabrics.

The share of synthetics in the total production of the country's textile industry is likely to improve to nearly 25 per cent by 1990 from the present 8 per cent. The domestic consumption of synthetic materials (expressed in terms of filament yarn) placed at 50,000 tonnes in 1983 is expected to reach a high of 2,00,000 tonnes in the next five years. In recent years the consumption of synthetics had doubled annually. The consumption in 1984-85 is estimated at 80,000 tonnes, and the supply (production) of synthetic filament yarn, is also expected to reach the same level during the same period to take care of the demand. In order to clothe the growing population of the country, the textile industry would have to supplement cotton with synthetic and other fibres, as there exist no scope for bringing more land under cotton.

Nylon yarn production reached a new high of 27,844 tonnes in 1983 against 26,272 tonnes in 1982 and 22103 tonnes in 1981. The utilisation of installed capacity in the industry was as high as 96.78 per cent. The installed capacity of nine units engaged in the industry was 30,599 tonnes against the licensed capacity of 36,499 tonnes. The Government has further issued as many as 18 Letters of Intent for an additional capacity of 75,812 tonnes of nylon filament yarn per annum, thus bringing the total sanctioned capacity to 1,12,200 tonnes. If the entire capacity is implemented the nylon yarn production is expected to increase by over four times as compared to the production in 1983.

TABLE 4

Per Capita Availability of Cloth over the 13 years (1971-83)

Year		Population (in millions)	Cotton Fabrics (in metres)	Blended spun & Nylon Polyster filament fabrics (in metres)	Total

Woollen Textiles

Wool which makes up the thin coat of sheep is used by man not only to cover himself but also to make fine carpets, rugs and blankets of high value. Even today, the synthetic wool enjoys a unique status as a durable, warm and healthy raw fibre for clothing. It is a flourishing business in the agricultural economy in many parts of the world. Australia, the U.S.S.R., China, New Zealand, Argentina and India are among the prominent wool producing countries. World production of wool in 1981 was 1,547 million kg and India's share was 34 million kg.

There are more than 200 breeds of sheep in the world and an array of derivatives to suit specific areas. The normal life span of sheep range from 10 to 12 years. All wild or undeveloped sheep have coarse hairy fleeces intermingled with fine downy wool. Specialised woolly breeds have-been evolved through research and uniform elimination of hairy fibres which help them develop a fine undercoat of fleece.

The superior wool is generally obtained from flocks reared in arid pastoral condition. Among the well-recognised breeds of sheep are the fine-woolled Merino and its crosses, the medium woolled sheep of Britain and other European countries, the big lustre sheep of Britain and the carpet woolled varieties of Asiatic region. The 'Golden Footed' Merino is the most celebrated breed in the world and this high yielding type, produces finest wool of good staple length and attractive appearance. The Indian breeds of sheep are known for their superior carpet wools and there is a great demand from abroad for the white wool produced in the North Indian plains. This is mostly utilised by the cottage industries and mills for the manufacture of apparel, blankets and carpets.

World production of Karakul lamb pelt is estimated at 18 million of which 95 per cent is from the Soviet Union, South Africa and Afghanistan. The pelts have a good international market with each pelt fetching Rs. 180 ($ 20). Wool offers the prospect of two-fold utilisation involving in the first place, woollen clothing and carpet manufacture, and in the second place, recovery of wool from these products for animal feeding. Wool is an important source of foreign exchange and deserves all encouragement and financial help from the Government. A selective policy of cross breeding indigenous breeds with foreign breeds alone can augment wool production in the country.

The woollen textile industry consists of the organised sector and the decentralised sector. The organised sector consists of woollen spinning units, corporate units, woollen combing units and powerlooms, handloom and hand-knitted carpet units. Although the first woollen unit was set up more than a century ago, there was no significant expansion till the beginning of the fifties. From hardly 16 units in the organised sector in 1950, there are now 150 mills with an installed capacity of 330,000 spindles. Three of the mills are in the public sector, one in Rajasthan and two in Kashmir.

The woollen industry is currently passing through a difficult time due to unrest in the Punjab and the claims by the importers of knitwear, of more than Rs. 1 crore on account of delayed shipments. Added to these, the slashing of duty drawback rates by 40 per cent on the export of woollen knitwears on one hand and on the other international price of wool and import duty being raised, resulted in a big blow to the industry. All wool fabrics had accounted for nearly 10 per cent of the total production in 1978 but the corresponding figure for 1983 is placed at only 5.6 per cent. The proportion of blends of 55 per cent polyester and 45 per cent wool has declined from 54 per cent to 29 per cent in the same period.

The character of the woollen industry has changed and blends with less wool content were thrust upon users. As this has a vital bearing on export promotion, the government should give the requisite relief to the industry. The low production underscores the failure of the efforts to increase the yield per sheep to a significant extent. In this context a vigorous large-scale cross breeding programme supplemented by better nutrition for sheeps to improve the quality and yield of Indian wool, is recommended. Apart from the factors enunciated above in respect of low yield, other factors like the varying agro-climatic conditions, backwardness of the shepherds, and a wide variety of sheep breeds are major hindrances to higher yield of wool. The average diameter, and staple length of wool vary from region to region leading to uneconomic use of wool and consequent wastage. Unless improvements in technology and infrastructure are made, and the present system of grading is changed to ensure better price and maximise utility by reducing wastage to the wool grower and wool weaver, the reasonable growth rate of 5 to 7 per cent expected to be achieved during the Seventh Plan, cannot be achieved.

Handloom

Handloom industry is the largest in the unorganised sector of the textile industry. The co-operative movement has gained strength in this sector covering 13.17 lakh handlooms by March 1980 out of the 30.21 lakh handlooms in the country. The new textile policy as well as the 20 Point Programme have given the pride of place to the handloom industry. This sector has been given a target of 4100 million metres to be achieved by the end of the Sixth Plan which means an increase of over 40 per cent during the plan period. The employment coverage is expected to go up from 61.5 lakh persons to 87 lakh persons over the plan period.

During the period 1974-80 production in the handloom industry had reached a figure of 2900 million metres and the exports (excluding silk goods) to the tune of Rs. 261 crores respectively. These developments were made possible, to a large extent, by a package of support programmes that were implemented following the recommendations of a study team in 1973. Under the RBI scheme of handloom finance for Weavers Co-operatives for production and marketing, the amount of credit sanctioned was about Rs. 58 crores in 1979-80 as against an estimated requirment of Rs. 140 crores. Twenty-five Intensive Handloom Development Projects with a coverage of a little more than 1 lakh handlooms and 21 Export Oriented Production Projects with a coverage of about 10,000 looms had been set up. Since the performance of these projects had not been uniformly satisfactory, and because weaknesses were noticed in terms of poor coverage of looms, low productivity of weavers, static product mix and inadequate institutional finance and marketing support, 9 new Weaver's Service centres were set up to strengthen the handloom sector.

The Central Government's keenness to develop the handloom sector on healthy lines is clear from the decision to declare 1984-85 as the ' Year of the Handlooms '. Keeping in view the achievements to be accomplished under the Sixth Plan in respect of this industry, the Government has suggested the setting up of additional spinning capacity to augment the supply of hank yarn, in addition to the setting up of National Handloom Development Corporation to facilitate the supply of hank yarn and other inputs at reasonable prices throughout the year. The programme envisaged under the Plan aims at bringing 60 per cent of handloom under effective co-operative coverage, increasing productivity through modernisation and renovation of looms, strengthening the technical extension systems for improving the quality and design of handloom products and re-activisation of looms in the North-east.

The production of various types of yarn has increased considerably during the last five years. The 1983-84 cotton yarn production was estimated at 1114 million kg blended yarn at 150 million kg and 10 per cent non-cotton yarn at 96 million kg as against 999 million kg, 137 million kg and 82 million kg in 1982-83, in the respective categories. A National Handloom Development Corporation was set up to meet the yarn requirements. Assistance is also being routed through the National Co-operative Development Corporation in setting up new handloom weavers' co-operative spinning mills and expansion of existing ones. The Planning Commission has agreed to allot an additional outlay of Rs. 100 million during the Sixth Plan for financing these spinning mills in states where such facilities are lacking. Under this scheme 13 new Weavers' spinning mills and expansion of 6 units have already been undertaken. The NTC had installed nearly 4,00,000 spindles by September 1983 in pursuance of its corporate plan in modernisation. This will help to meet the yarn requirements of the decentralised sector of the yield-deficit States.

The number of looms under the co-operative coverage is estimated to have increased from around 1,623 million (53.8 per cent) in 1982-83 to about 1,725 million (56.5 per cent) by the end of the financial year 1983-84. The total flow of central assistance to states under various co-operative coverage schemes was around Rs. 66.5 million during 1983-84. The flow of institutional credit to the co-operative sector increased from Rs. 1450 million in 1982-83 to around Rs. 2000 million during 1983-84. To boost sales of handloom cloth, the scheme of 20 per cent special rebate (to be shared equally between the Central and State Governments) on the sale of handloom cloth was continued during 1983-84. The rebate was available for a period of 60 days. The Janata cloth scheme is operational in 14 States and one Union Territory. Technical support to the handloom development programme is being provided by a chain of 24 Weavers Service Centres and 3 Indian Institutes of Handloom Technology.

For improving the economic conditions of weavers in hill areas, the Government has accorded a special thrust for development in the hill areas of the country. A Weaver's Service Centre has been set up at Chamoli, which has also initiated action for introducing a degree course for people living in the hill areas. The rebate pattern has been liberalised for hill areas and woollen handlooms produced in hill areas have become eligible to receive upto 25 per cent to be shared equally between the Central and State Governments. Additional assistance amounting to Rs. 2.5 million has been sanctioned for Dye-House Project in Nagaland and Rs. 1.5 million offered to Manipur Government by way of share capital assistance for the Manipur Handloom Corporation. A National Handloom Design Centre cum National Handloom Museum has also been sanctioned for collecting old specimen of textile and techniques of textiles, weaving, printing and dyeing for study, research and product development.

Khadi and Village Industries

Khadi and Village Industry comprise of a broad spectrum of industries which are mainly cottage and household industries. Khadi means any cloth woven on handlooms from cotton, silk or woollen yarn, handspun or a mixture of any two or all such yarns. Ever since the establishment of Khadi and Village Industries Commissio in 1957, rapid progress has been made in th growth of this industry. There are, at presen 25 Khadi and Village Industries Board, 735 registered institutions and about 27,800 co-operative spread over 1 lakh villages. Besides Khadi, ther are 25 village industries, within the purview o the Khadi and Village Industries Commission the recent additions being lok-vastra, poly-vastr and processing of maize and ragi. The emergenc of Polyster khadi or Polyvastra is really a boon t the common man in the sense, he enjoys highe durability than that of cotton khadi fabrics Added to it, the rustic appearance and feel of thi fabric has a tremendous appeal in the expor market.

During the period 1974-80, the gross value o output registered annual growth rates of 12. per cent in Khadi and 8.9 per cent in Villag Industries, the overall rate of growth being around 10 per cent at constant prices. The annual pe capita value of output increased from Rs. 856 to Rs. 1263 and the per capita earnings from Rs. 21 to Rs. 381 at current prices during the period 1974-79. However, at constant prices, the increase is marginal. Some of the recent developments in the sub-sector are installation of about 1.1 lakh new model Charkhas and about 80,000 gobar gas plants mostly in rural areas, identification of new fibrous raw materials such as banana, screwpine etc., and then use in manufacture of fancy and utility articles, manufacture of irrigation pipes, leather sports goods and garments and mixing of polyester fibre with cotton for producing blended fabrics. Coupled with these developments the element of subsidy has also been reduced. The 20 per cent weaving subsidy on khadi was replaced by a lower subsidy of 10 per cent as rebate on sale of khadi.

During the Sixth Plan period the value of output in this sector is expected to grow by about 3 times. The annual rate of growth being 15 per cent in khadi and 26 per cent in village industries. The employment coverage is estimated to reach 50.5 lakhs. Programmes for khadi would be re-oriented to increase production particularly of woollen and silk and to introduce new cotton varieties like muslin khadi. Among the village industries emphasis would be on gobar gas, village leather, cottage match, non-edible oil and soap, pottery, khandsari etc. It is also proposed to disperse these industries over a wide range so that non-tsaditional states have a larger share in the increased production and employment. To introduce an element of viability, the plan contemplates on advancing loans for khadi at 4 per cent rate of interest.

Silk Industry

India ranks third after China and South Korea on the global silk scene. Silk with its fine, soft texture and myraid colours always have a special niche in the hearts of women and men alike. Silk fabrics are recognised as a symbol of social status and are used on religious occasions, as garments of purity. There are four varieties of silk viz. mulberry, tasar, eri and muga. Mulberry silk accounts for 91 per cent of the total production of raw silk in the country. India is the only country in the world which produces all the four commercially known varieties of silk.

Sericulture is practised in almost all the states in our country. It has recorded an impressive progress during the past decade, with the output of raw silk doubling from 2600 tonnes in 1971-72 to 5249 tonnes in 1981-82. Karnataka accounts for 75 per cent of the land under mulberry cultivation and for 78 per cent of the total silk worms. Tamil Nadu, Andhra Pradesh and Bihar have also started sericulture on a large scale. While Bihar, M.P., Manipur and Orissa are tasar sill areas, Karnataka, Andhra Pradesh, Tamil Nadu, Jammu & Kashmir, and West Bengal are primarily mulberry silk areas. Assam, Bihar and North East states are eri and muga silk areas. The weaving areas are located in Tamil Nadu (Kanchipuram), Uttar Pradesh (Varnasi) and Gujarat (Surat).

TABLE 5

Statewise Production of Mulberry Raw Silk

(in tonnes)

State	1980-81	1981-82

Figures in brackets indicate the country's per centage share in total production in the world in 1980.

Source : Economic Times.

The Sixth Plan has envisaged an output of raw silk of 9,765 tonnes by 1984-85. Silk production during the second year of the Plan (1981-82) was only 5249 tonnes. If the target is to be fulfilled, the average annual rate of increase in silk output would have to be of the order of 30 per cent during the next three years. In 1980-81 and 1981-82 the rate of growth of silk production was only four per cent, because of drought conditions and pest attacks in Karnataka. On account of the slow rate of silk output, India had to import raw silk from China. However, there has been a significant increase in silk production, following the completion of the World Bank project in Karnataka. The total production of raw silk went up to 5.70 million kg in 1982-83 as against 5.25 million kg in the previous year. A World Bank Programme involving an expenditure of Rs. 80 crores is being further intensified to raise the output two-fold during the next two years to combat the shortage likely to arise. The Central Silk Board set up in 1949 is further strengthened by the establishment of cocoon exchanges and silk exchanges for developing sericulture. The Tamil Nadu Government has allowed Rs. 4 crores for a district sericulture development centre to be set up at Dindigul. It has also allotted Rs. 19 lakhs to Madurai district under the Plan and Non-Plan schemes for sericulture development. Technical extension centres have been set up to educate farmers on disease prevention measures and modern methods of sericulture.

On the price front, the prices of the three major varieties traded normally have ruled firm during April-October 1982. The average price of Government filature raw silk went up from Rs. 382 per kg to Rs. 459 per kg thus recording a 20.2 per cent increase. The cottage basin recorded a rise of 9.1 per cent from Rs. 408 to Rs. 445 per kg. Charkha silk rose from Rs. 341 to Rs. 392 per kg an incrase of 14.9 per cent. The average price of Government filature silk touched a peak of Rs. 577 per kg in December 1981 while the average price of cottage basin silk and charkha silk was quoted at Rs. 584 and Rs. 476 per kg respectively in December 1981. The failure of crops due to drought conditions prevalent in silk worm rearing districts of Karnataka is one of the main factors that was responsible for the bullish trend in silk prices. Another factor that contributed to the supporting prices, is the traders hiking the prices after cornering the stocks. Sericulture being a source of livelihood for a large number of people, demands great attention of the Government. Adequate steps should be taken to tap the immense potential of the non-mulberry varieties also, especially the tasar variety, so that there is a balanced growth of sericulture in the country.

Garment Industry

In India, the ready-made garment industry is considered as an off-shoot of our textile industry, which dates back to the middle of the 19th century. There was no ready-made garment industry worth the name till the dawn of independence, despite the fact that this particular industry calls for no extraordinary skills or huge capital investment. India's ready-made garments industry is very small in relation to what might be expected in the context of the needed basic raw material for that industry. It only accounts for about one per cent of industrial production and provides employment to about the same percentage of the total labour force in India. It is also very small in relation to its size in developed countries and some developing countries which have specialists in doing such work for the developed markets. In terms of major manufacturing countries, the U.S.A. accounts for 30 per cent of the world's production of ready-made garments followed by Japan with 14 per cent, West Germany-10 per cent, and the U.K.-9 per cent, while India's share in the world production stands at 1.3 per cent. But one should consider that such comparisons can be deceptive as they hide a considerable amount of activity which does not reach the organised sector of the market.

The trend of ready-made garments picked up only in the early decades of the 20th century. In its early stages of development, ready-made garments were limited to only cheap varieties of clothes and undergarments, apart from the needs of the defence personnel. The market then, gradually extended to the high strata of society. Even in some of the more industrialised countries, a major expansion of this industry did not take place until after the First World War. In India, the garment industry had to wait till after the Second World War to get over its teething troubles. With the expansion of the sphere of industrialisation, better paid job alternatives became available to the relatively more skilled workers. This affected sectors like clothing, by way of shortage of labour, where returns to the workers was not commensurate with the degree of skill required to work.

The industry, even after the introduction of power driven sewing machines or mechanical process of button-holing or stitching or embroidery, continued to remain labour intensive. Availability of less expensive labour in developing countries, therefore attracted the garment merchants in developed countries for getting their consignments in the developing countries. The intensity of this factor increased considerably after the Second World War, when the standard of living of the people in industrialised countries improved rapidly creating demand for garments which could not be met locally.

Another important factor besides income levels of the consumers and climatic conditions prevalent in the country is, the emergence of man-made fibre. Its lasting qualities and the facilities it affords for washing and easy wear has made both the fabric and the garments made out of it is extremely popular. This has given fillip to that segment of the garment industry that caters to the domestic market. The other factor which will work towards the same end is that, unstitched fabric is going out of fashion among the younger generation both in the urban as well as in the rural areas. These aspects will have to be considered for establishing and consolidating the garment industry for the home market. Garments for children have become an important aspect of the clothing pattern in India. Currently, a major portion of the domestic market for the garment industry is confined to the requirement of children's wear, the primary reason for it being the cost factor. Children's garments, on account of their size, can be stitched from cut-pieces available from tailoring shops and from seconds, given away at throw away prices by textile mills. Also, the margin of profit added to children's wear is comparatively much higher considering the fact that people readily bear the extra pric for children's garments.

An overall demand for clothing has gone u in the world because of increasing degree o industrialisation affecting clothing habits. Increasing level of communication between countrie leading to increased travel and tourism has i turn paved the way to picking up different style and fashions from different countries and thereby creating a demand both seasonal and occasionwise. Many clothing manufacturers in develope countries shifted a part of their production capacit to developing countries as a result of risin production cost, particularly the labour componen of it. Lower cost and hence lower prices of th finished product manufactured in developin countries, but purchased by developed countries helped to increase the demand for these garments Quite a few manufacturers in developed countrie have gone in for large scale vertical integratio to obtain control over sales and production These manufacturers started getting more an more ready-made garments made in the Thir World countries, in order to be able to offer th entire range of ready-mades at the sales outlets i their respective countries. Thus trade in suc articles have helped in boosting the world trad figure.

Exports

The textile sector continued to account fo almost 20 per cent of the total exports from India covering a wide range of products, which includ ready-made garments, cotton textiles, made-up handloom products, silk, wool and woolle products, man-made textiles and coir and coi products. Exports of cotton textiles includin woven and knitted garments totalled Rs. 1078.2 crores during the fiscal year 1983-84 as agains Rs. 936.03 crores in the previous year, thu recording an impressive rise of Rs. 142.18 crores

The largest increase was accounted for b knitted and woven garments whose exports rose by 28.6 per cent from Rs. 492.41 crores in 1982-83 to Rs. 633.47 crores in 1983-84. Mill made. powerloom and handloom fabrics rose to Rs 284.12 crores in 1983-84 as against Rs. 239.3 crores in the previous year, recording thus, a rise of 18.7 per cent. Cotton yarn rose from Rs. 18.33 crores in 1982-83 to Rs. 22.66 crores in 1983-84. However exports of mill made, powerloom and handloom made-ups declined considerably by 28 per cent from a peak of Rs. 171.81 crores in 1982-83 to Rs. 134.23 crores in 1983-84. Cotton sewing thread also fell from a high of 10.92 crores to Rs. 10.84 crores during 1983-84. Export of handloom goods showed a slight fall. The earnings came down from Rs. 330.9 crores in 1982-83 to Rs. 309.3 crores in 1983-84.

Nearly two-thirds of India's handloom exports are to the U.S. and member countries of EEC. Other important buyers include the Soviet Union, Japan, Singapore and Australia. The value of exports of khadi (including polyvastra) textiles during 1982-83 amounted Rs. 3.68 crores. On the silk front, despite the price differential, exports of silk fabrics rose from Rs. 67 crores in 1982-83 to Rs. 78 crores in 1983-84. The major items of exports being sarees, dress materials, carpets scarves etc. India's exports comprise mainly mulberry silk fabrics which account for 95 per cent of the aggregate value. Silk exports during the first half of 1982-83 recorded a 28 per cent increase over the corresponding level in 1981-82 because of the advance licence facility scheme. Under this scheme the exporters were allowed duty-free imports of raw materials. The U.S.A West Germany, the U.K, Malaysia and Singapore are leading buyers of Indian silk.

Indian garment exports which displayed a measure of dynamism in the Seventies have of late stagnated around Rs. 650 crores per year. Though exports have picked up over the years, India is only a marginal supplier in the world garment market. Garment exports during April-February 1983-84 had totalled Rs. 631 crores which is Rs. 69 crores short of the target of Rs. 700 crores for the year. The major contribution to this figure was made by the U.S. which accounted for Rs. 88 crores during January-February 1984 as against only Rs. 38 crores in the same period of the previous year. Similarly exports to the EEC and other quota countries picked up during this period. While the EEC accounted for Rs. 62 crores during January-February 1984, the other quota countries provided orders worth Rs. 14 crores.

It is estimated that by 1984-85 exports of mill-made, powerloom and handloom textiles would rise to about 920 million metres, as against 820 million metres during 1982-83. Similarly, piece goods, ready-made garments, made-ups and other manufactures are expected to rise by the same amounts during the period. Cotton yarn and sewing thread which recorded 6580 tonnes in exports during 1983-84 is estimated to rise to 7390 tonnes by 1985-86. An ambitious handloom exports target of Rs. 408 crores has been fixed for 1984-85. This will comprise of cotton fabrics—Rs. 90 crores, cotton made-ups—Rs. 50 crores, cotton garments—Rs. 168 crores and silk as well as other products—Rs. 100 crores.

NEW TEXTILE POLICY

In the past few years the development of the textile industry has been guided by the policy framework announced in March 1981. While considerable progress has since been achieved in several areas under this policy framework, the objectives of the textile policy outlined in the textile policy statement have not been fully achieved. There is evidence of an increasing incidence of sickness in the organised mill sector reflected in a large number of closed units. The per capita availability and consumption of cloth still remains at a very low level. There is also a large unsatisfied demand for durable synthetic and blended fabrics at cheaper prices, which is not being met by indegenous production. The full export potential of textile products remains to be realised. The textile industry has experienced fluctuation in its fortunes in the past also. However, an anlysis of the current difficulties faced by the industry reveals that the present crisis of the industry is neither cyclical nor temporary, but suggests deeper structural weaknesses. Therefore, the government has reviewed the present textile policy and after careful consideration, formulated this new policy for the restructuring of the textile industry.

The textile indusry has so far been viewed in a compartmentalised manner either in terms of various sectors namely organised mills, powerlooms and handlooms or in terms of fibre use namely cotton textiles, woollen textiles, man-made textiles and silk textiles. Classification on such grounds have led to structural rigidities in the textile industry. Hence to eliminate the existing structural weaknesses and to evolve a more integrated view of the textile industry the government has proposed the restructuring of the textile industry. The proposal comprises the following three main dimensions :

(i) the industry shall be viewed in terms of the stages of its manufacturing process namely spinning, weaving and processing.
(ii) The industry shall be provided with fuller flexibility in the use of various fibres and
(iii) the industry shall subject to more pragmatic policies regarding creation or contraction of capacities by units in order to increase competition and promote healthy growth in the industry.

In the spinning sector, all steps will be taken to ensure optimum utilisation of the spinning capacity. The availability of raw materials for this sector would also be augmented. The infrastructure for the distribution of yarn would be strengthened. At the same time, necessary measures to encourage and increase spinning in the khadi sector would be taken in view of its large employment potential.

In the weaving sector the distinct and unique role of the handloom sector shall be preserved. The growth and development of this sector shall receive priority. The composite mills and the powerlooms have their own respective strengths and weaknesses. For the purpose of policy, powerlooms in the organised mill sector and in the unorganised powerloom sector shall as far as possible, be treated at par and allowed to compete on the basis of their inherent strengths and capabilities.

In the processing sector, the independent power processors and the processing houses in the mill would be treated at par and each would be allowed to operate on the basis of its competitive strength. The small hand processing units with limited output will receive special consideration.

The multi-fibre approach implicit in providing fuller fibre flexibility would be guided by the following considerations :

(i) Full fibre flexibility as between cotton and man-made fibre/yarn would be provided to the textile industry. Greater fibre flexibility in the use of wool shall be provided in a phased manner to units licensed for cotton and man-made units licensed for cotton and man-made textiles. Woollen units shall be given full fibre flexibility.
(ii) Adequate availability of man-made fibres at reasonable prices shall be ensured by increased domestic production supplemented as and when necessary by imports.
(iii) Creation of capacity by new units and expansion of capacity by existing units for production of synthetic fibres yarn would be so determined as to realise economies of scale in order to reduce costs of production.
(iv) Fiscal levies on man-made fibres/yarn and on the intermediates used as inputs for the production of such fibres/yarn shall be progressively reduced in such a manner as to facilitate absorption of increased domestic production so that the benefit flows to the consumer in the form of lower prices of synthetic and blended fabrics, and the export shall be kept open for man-made fibres/yarn.

The pre-eminent role of cotton as the main raw material of textile industry would be maintained. Utilisation of indegenous cotton would be ensured by domestic consumption and by export of cotton, and other manufactures. Cotton growers shall always be assured off-take of their produce at remunerative prices. Cotton needed by the textile industry would be made available in adequate quantity and at reasonable prices. The role and functions of the Cotton Corporation of India would be reformulated to include price stabilisation operations. For this purpose, the corporation would have the necessary access to international markets. The present varietal imbalance of cottons shall be corrected by a mix of policies aimed at encouraging increased use of long and extra long varieties of cotton on the one hand and higher production of short and medium staple varieties on the other.

Capacity expansion by existing units and capacity creation by new units would be permitted subject to the general industrial policies including the provisions of the MRTP Act and FERA. As a corollary, units would also be allowed to contract capacities, including closure of a unit or part thereof, wherever necessary and justified provided the interest of the workers are fully protected. This approach would increase the degree of competition among units in the industry and create an environment conducive to a reduction in cost and improvement in quality.

The unplanned growth of powerlooms in the unorganised sector has mostly tended to concentrate in a few areas. A significant proportion of the powerlooms remain unregistered and unauthorised. The new policy insists on compulsory registration of all powerlooms. The organisation of production in the powerloom sector should be guided by the objectives of raising productivity, increasing efficiency, improving workers welfare and facilitating locational dispersal. In keeping with these objectives, a suitable package of measures would be evolved to bring about a healthy development of the powerloom sector. It would also be ensured that the powerlooms do not take up to articles reserved exclusively for the handlooms.

In order to preserve the unique role of handlooms and to enable them realise their full potential as also to ensure higher earnings for the handloom weavers, the policy suggests the following steps :

(1) the development of handlooms through co-operatives and central/state level corporations shall be intensified.

(2) greater emphasis shall be placed on modernisation of looms and provision of technological and other inputs for improving productivity of handlooms and the quality and finish of handloom products.

(3) special efforts and means to ensure adequate availability of yarn and other raw materials to the handloom sector should be provided. The infrastructure for the procurement and supply of such inputs at reasonable prices to the handloom weavers shall be strengthened through the operations of the National Handloom Development Corporation and the state-level agencies.

(4) the production of mixed and blended fabrics on handlooms shall be encouraged with the view to improve the wages and earnings of the weavers.

(5) protection to handlooms will be provided by reserving articles for their exclusive production in the handlooms sector under the Handloom (Reservation of Articles for Production) Act 1985. The provisions of this act shall be strictly enforced and machinery for doing so shall be suitably strengthened.

(6) to improve the competitiveness of the handlooms, steps would be taken to remove, as far as possible, the cost handicap of the handlooms vis-a-vis the powerlooms by suitable fiscal measures.

(7) to improve the marketing of handloom products, —infrasturcture of marketing complexes, training of marketing personnel and intensive publicity shall be organised. Steps would also be taken to upgrade the technical, managerial and administrative skills of personnel employed in the handloom sector.

(8) to strengthen the data-base for the handloom sector for better planning and execution of handloom development programmes, a census of handlooms shall be undertaken. The machinery for implementation supervision and evaluation of handloom programmes shall be strengthened.

In order to improve the working conditions of the handloom weavers and to provide direct benefit to them, the following schemes amongst others should be introduced :

(*a*) a contributory thrift fund scheme to provide assistance to the handloom weavers during times of need.

(*b*) a workshed-cum-housing scheme to provide a better place for work and living to the handloom weavers.

The responsibility for the entire production of controlled cloth shall be transferred to the handloom sector by the end of the Seventh Five-Year Plan. The quantum of controlled cloth and Janata which was fixed at 650 million metres shall be increased to provide a larger quantum of cloth at affordable prices to the poorer sections of the population. Measures will also be taken to improve the quality of cloth. The public distribution for controlled cloth would be strengthened and streamlined.

All the encouragement would be given to the expansion of the Khadi programme in view of its large employment and income generating potential in rural areas specially among women. Steps would be taken to improve the production process, upgrade the skills of workers, raise productivity, diversify the product range and strengthen the marketing arrangement under the khadi programme.

The incidence of growing sickness in the textile industry particularly in the organised mill sector is a matter of great concern. The reasons for sickness are many fold and complex which include financial difficulties, managerial incompetence and negligence, obsolete plant and machinery, inadequate maintenance, incorrect product mix poor marketing, excess labour and poor industrial relations. While steps necessary to improve the health of the industry as a whole and to prevent sickness are indicated in this statement, unit specific problems would have to be tackled on a case by case basis. The measures needed for the revival of a sick unit have to be based on a detailed and objective study of the causes that led to the sickness and identification of the steps necessary to revive the sick unit. In case of potentially viable units a rehabilitation package would comprise of the provision of additional balancing equipment, replacement of existing machinery, change of product mix, better marketing strategy, rationalisation of labour including improvement of working norms, strengthening of management and organisation and adjustment of capacity in the different stages of manufacturing. In some cases, the units, although potentially viable may have been led to sickness by management or mismanagement. In such cases the existing management may have to be changed. Where a unit has no expectation of becoming viable within a reasonable period of time, the policy suggests that, there being no alternative, the units will have to be closed down subject however to the condition that workers interest is protected. Takeover by the government or nationalisation of such sick units does not in any way provide a permanent solution and hence the government would not as a rule intervene in such cases.

According to the policy, modernisation in the spinning, weaving and processing sectors will have to be undertaken on the basis of carefully identified needs of each unit, since inadequate modernisation and renovation of old and obsbolete plant and machinery have been the main factors responsible for the present difficulty of the industry. For the purpose of modernisation adequate funds would continue to be provided under the soft loan scheme of the IDBI. In order to enable the industry to generate internal resources for modernisation, a textile modernisation fund shall be created. A national level standing advisory committee on modernisation of the textile industry shall be set up, which would include representatives of management and labour as also suitable technical experts and representatives of financial institution. This committee shall identify on a continuous basis the needs of modernisation and type of modernisation the industry should adopt.

In the process of implementation of modernisation programme, or in the event of closure or revival of sick units, it is necessary to ensure that the interest of workers are fully protected. All possible avenues must be tried before retrenchment to minimise the social costs of transition implicit in the restructuring of the textile industry. The funds needed for payment of retrenchment benefit to labour shall be part of rehabilitation package and the loans needed for such compensation shall be provided on concessional terms. Displaced workers are to be given priority in securing employment in other units under the same management or other industrial units in the same area. Concessional finance would be made available for providing opportunities of self-employment. Workers shall also be encouraged to form co-operatives to form part or whole of the units. Schemes for training and re-training of labour to faciitate re-deployment shall be formulated.

The indigenous textile machinery manufacturing industry shall be given encouragement to reduce costs, upgrade technology and improve the quality of machinery. For expeditious modernisation of the handlooms, research for evolution of improved types of handloom and adequate arrangements for ensuring swift and smooth transfer of technology from the research institutions to the handloom weavers will be given priotiy. More powerloom service centres shall be established to enable the powerloom weavers to improve their skills with regard to maintenance of equipment, design development and quality of weaving.

Exports from the textile sector contribute a significant portion to the total foreign exchange earnings derived from exports. There are however, certain constraints both internal and external which hinders exploitation of the export potential to the maximum. In the international context, the government shall strive to bring about a liberalisation of world trade in textiles which would alleviate the external constraints on the export front. In the domestic sphere, all necessary steps would be taken to exploit the comparitive advantage in this sector and to make the export of textiles more competitive in the world market in terms of both quality and prices. Export of products from the handloom sector including silk products have considerable potential in the world market. All encouragement would be given to assist in the realisation of this potential. The Government would continue to lay emphasis on the development of sericulture on account of its employment potential in rural areas, high income generating capacity and ability to earn valuable foreign exchange through exports. According to the policy, encouragement and support will be continued to be given to the central Silk Board and state governments for rapid development of this industry in all parts of the country. Greater attention will be given to schemes relating to production of quality seeds, plantation of improved varieties and expansion of sericulture activities over larger areas and achieving a higher yield per hectare. The existing extension and training services for educating the farmers in the improved techniques of silk worm rearing and control of diseases would be strengthened. The Government would also continue to promote the growth of the woollen sector in order to ensure adequate availability of woollens and blankets at reasonable prices to economically weaker sections particularly those living in hilly regions. Programmes would be undertaken to augment indigenoas new wool production in terms of both quantity and quality. Since the indigenous raw wool production is not enough to meet the requirements of the industry, liberal policy regarding imports of quality wool as well as shoddy would be continued. Research and, development programmes will be promoted so that cheaper and better quality woollen products are developed for domestic and export markets.

The Knitting and Apparel manufacturing sectors contribute significantly to employment generation and export earnings besides meeting domestic demand for clothing. The Government shall pursue policies for strengthening, modernising and developing the sector. The existing marketing and distribution system of the industry would be reviewed to introduce changes wherever necessary in order to evolve a more efficient system which would reduce costs and margins and provide both consumer protection and satisfaction. The institutional mechanism for market research would be strengthened.

The textile industry has been subjected to a number of controls and regulations, many of which have become irrelevant or unnecessary with the passage of time, such controls would be reviewed for elimination, phasing out or modification as the case may be.

The government hopes that the policy framework outlined above would not only facilitate the restructuring of the textile industry but would equip it to make an increasingly significant contribution to output, employment and exports and would satisfy the clothing needs of all sections of the population.

ADITYA MILLS LTD.

ESTABLISHED in 1960. **Directors :** A. K. Kanoria (*Chairman & Managing Director*), J. P. Kanoria (*Vice-Chairman*), M. Shanmugham Chettiar, M. K. Mohta, Bhaskar G. Kakatkar, N. K. Berwa (*Nominee, Govt. of Rajasthan*), S. C. Banerjee (*IFCI Nominee*) and R. C. Maheshwari (*President*). **Secretary :** V. P. Sharma. **Registerd Office :** Madanganj-Kishangarh-305 801 Rajasthan. Telegrams : 'MILADITYA'. Telephones : 97, 98 & 99. Telex : 303-241. **Auditors :** Messrs. G. P. Kejriwal & Co.

Objects and Activities : Manufacture of cotton yarn, synthetics blended yarn and M. S. Ingots.

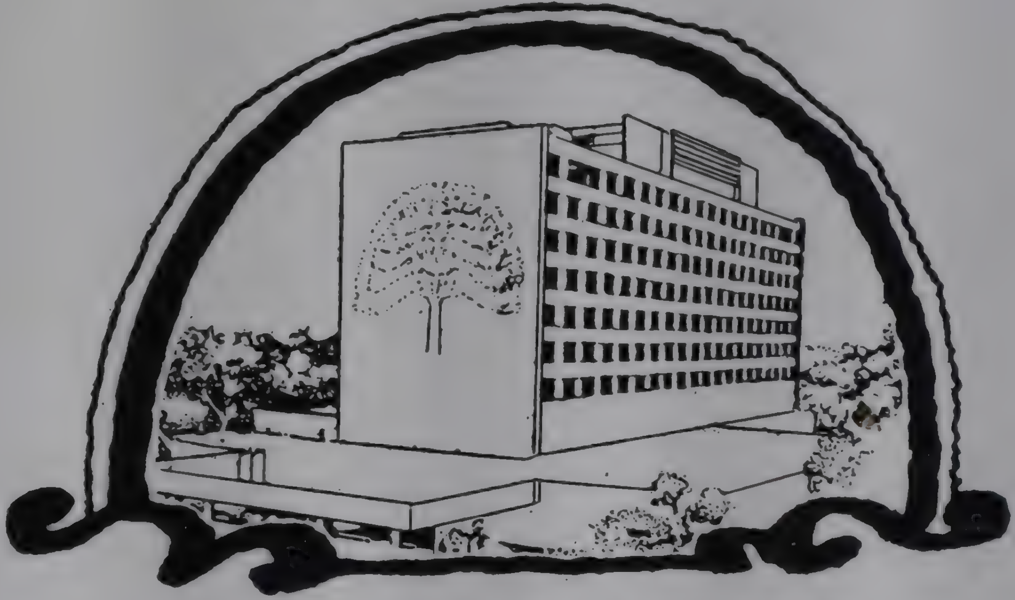
REFLECTING ALL THE GLORY
OF THE SOUTH. . .



MADRAS

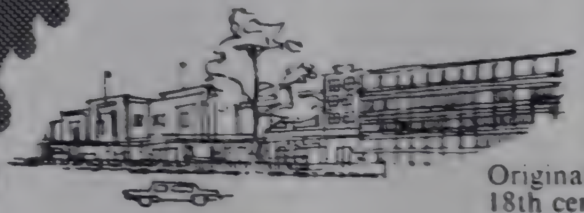
In a land full of legends, a hotel that pays a gracious tribute to the glory of the South. A delicate fusion of traditional splendour and modern-day luxury. Truly the finest hotel in all of South India.

Taj Coromandel Hotel
Madras

THE TAJ GROUP OF HOTELS

The South is full of magnificent landmarks...

...here's your chance to stay in one of them!



The Connemara Hotel, Madras

Among the several ancient royal residences all over India, now acquired by hotel chains, the Connemara Hotel is probably the oldest to be so converted.

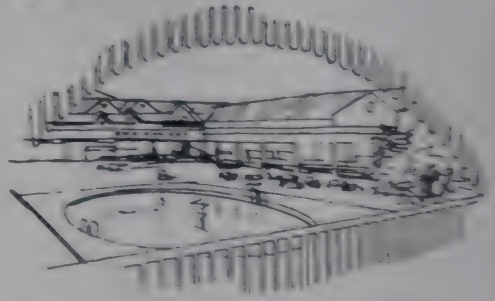
Originally, the property of the Nawab of Wallajah (late 18th century), it later belonged to the family of John Binny, founder of Binny and Co.

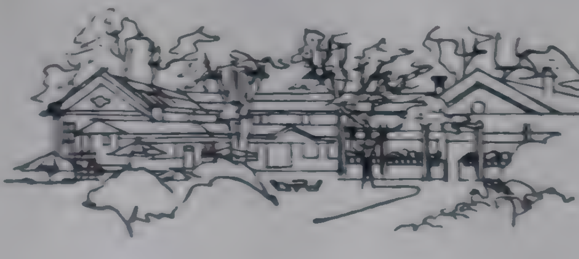
Spencer & Co. acquired it in 1912 — and by 1936, the facade as it stands today was built. Since then renovations, alterations and additions have kept pace with changing times and guest demand—but without touching the gracious old-world character of the hotel which is its single, most enduring charm.

Today's Connemara is an internationally-known commercial hotel which stands in the business and entertainment centre of the city, with 142 beautifully-appointed airconditioned rooms and luxurious suites. One of them could be yours on your next trip to Madras.

The West End Hotel, Bangalore

Bangalore's West End is breathtakingly lovely, like the city to which it belongs Its large, cool suites, its wide lobbies, its rolling lawns, its bank of flowers, its cool courtyards are so restful, you'd imagine you're miles away from a city . . .
. . . yet amusement is only minutes away if you want it. At Bangalore's thrilling races, across the street from the Hotel; at West End's Supper Room disco floor; in the amazing shopping values; in nightclubs, bars and theatres all over this exciting city.





The Savoy Hotel, Ooty

If you want a resort hotel all the way, the charming 120-year old Savoy awaits you in sylvan Ooty. With hours stretching into enchanting days and weeks.

The Savoy Hotel is set on a beautifully landscaped hill-top . . amidst wooded hillsides, tea gardens, lawns and rolling greenspace—dotted with places of sightseeing interest. Many pleasurable activities are available—trekking, horse riding, trout fishing in mountain streams, rowing, golf—and in the summer, horse racing.

For instant reservations at any of our hotels, call us straightaway.

TOURISM

TOURISM is a dynamic factor of social progress and a great vehicle of knowledge and ideas, which fosters goodwill among ople around the world and also within the untry. Rising disposable incomes, tremendous rides in aviation, surface transportation and mmunication services have all contributed to a enomenal growth of tourism as an industry l over the world.

There are certain invisible items in international ade, which give rise to flow of international oney payment without directly causing any wnership of tangible goods. Tourism is one ch business which is devoid of the commodity ement. Being free from confrontation between uyers and sellers, it has proved its capacity to hrive even in situations of stress and difficulty. he implications of tourist traffic for the developing world are manifold. It can wake up ackward communities to new possibilities. A strong demand develops for local goods and services, initiating a multiple chain reaction of ever widening gainful activity. Thus a new set of linkages between trade, employment and industry is brought into play. In point of employment and turnover, the tourism industry currently occupies the second place at the world level. It is significant to note that all the above socio-economic benefits of tourism are achieved with a relatively low level of investment. The growth potential of tourism industry is among the highest and it is even hoped that by the end of the century it would overtake oil as the world's largest industry. In any case, it already represents the largest segment in terms of invisible earnings.

Modern tourism was formalised in the 1840's when Thomas Cook, the travel agent wizard, organised a rail tour for 600 delegates from Leicester to Loughborough. Travelling for pleasure, since then, has become routine for those who have the time, money and inclination. According to the World Tourism Organisation (WTO), in 1982 there were 3 billion domestic arrivals and 280 million international ones, involving 600 million and 140 million people respectively. Together they represent about 28 per cent of the World's working population. Using data for the period 1963-82, as a measure for assessing the world tourism, it is likely that international tourist arrivals estimated for 1990 might be perhaps 900 million or even more. As such, the potential for world tourism is as vast as it is varied.

Tourism Industry in India

India's travel traditions are very old. Wheel and money, the twin aids to human movements, were in vogue in the pre-vedic Indus Valley Civilization of Mohan-jo-daro. The main motivation which assisted human movement then was trade and religion. Emperor Asoka's emissaries travelled with the message of Buddhism to Sri Lanka and East and West Asia, two and half centuries before the birth of Christ. Chinese travellers Fa-Hien (405-411 A.D.) and Hiuen-Tsang (643 A.D.) came to India and had left detailed accounts of their extensive travels in India.

India's potential for tourism is virtually limitless. As a land of colourful contrasts, it offers the foreign visitor an opportunity to see centuries-old art and architecture side by side with modern projects of science and technology. The grandeur of the Himalayas, the great historical monuments, ancient temples, fascinating beaches, the varied flora and fauna and above all the infinite variety in the colourful costumes and customs of her nearly 730 million people, all these make India, a desired destination for international tourists.

Modern tourism in India is still in the state of infancy. Efforts towards promoting tourism came to be made only from the year 1950, and the first recognition to tourism as a developmental endeavour was given during the Second Five Year Plan. The investment in tourism in the Second Plan was only 0.2 per cent of the total outlay for that period. In 1951, the foreign tourist arrivals in India were a mere 16,829. This has increased phenomenally over the last 32 years by 52 times, to 8,84,731 in 1983. Between 1951-81, the compound growth rate of tourist arrivals in India was 14 per cent as against the world average of 8.2 per cent. Though India's share of world tourist traffic went up five-fold, still it is a mere 0.29 per cent.

For a country of the size of India, so immensely rich in tourist attraction, this is a dismal performance. This is primarily because of the fact that tourist interest presupposes a proper mix of natural attraction on the one hand and infrastructure and other services on the other hand and as it is, adequate efforts have not been so far made in this direction. Lack of infrastructural support, beggar menace, erratic air services, cumbersome customs clearance and foreign exchange formalities are some of the specific causes for such a poor performance.

In contrast to this, tourism has achieved startling results in many other countries around the world (Table 1). The U.S.A., and five West European countries continue to occupy the top positions both in terms of tourist arrivals and receipts. Spain has about 5 million more visitors annually than its total population of about 30 million, while in 1981 'little' Singapore received 2.96 million tourists, for a total population of 2.47 million.

Tourism, is one of the largest net foreign exchange earning industry in the country. It employs directly/indirectly more than 4 million people and though it yields about Rs. 225 crores in the form of direct and indirect taxes to the Centre and the States, it continues to enjoy a low priority in the government's scheme of things. For instance, the Sixth Plan allocation for tourism in the public sector is only Rs. 187 crores in the Central and State spheres as against a total plan outlay of Rs. 1,00,000 crores, which is about 0.2 per cent of the plan outlay. The tourism target for the Sixth Plan period aims to raise the tourist arrival figure to 1.7 million by 1985 and the perspective target for 1990 has been fixed at 2.5 million. Based on the trends indicated by the statistics of the World Tourism Organisation, it has been estimated that India may have 8-10 million tourists by 2000 A.D. which may even go up to 15 million if facilities are adequately developed and markets appropriately tapped. This is a difficult but challenging task which involves (*a*) creation of additional tourist infrastructure such as hotels, air, rail and road transport facilities, (b) services such as restaurants, cafeteria, entertainment, shopping, and (*c*) service agencies like tour operators, tour guides and a pool of well trained people to man the entire tourist industry.

The growth trend of foreign tourists arrivals and foreign exchange earnings in India between 1976-83 can be seen from the following table.

TABLE 2

Trends in Tourist Traffic in India

Year	Tourist Arrivals	Percentage increase over previous year	Foreign Exchange Receipts (Rs. in millions)	Percentage growth over previous year
1976 ..	5,33,951	..	2,250	..
1977 ..	6,40,422	19.9	2,830	25.8
1978 ..	7,47,995	16.8	3,300	16.6
1979 ..	7,64,781	2.2	3,840	16.4
1980 ..	8,00,150	4.6	4,820	25.5
1981 ..	8,53,148*	6.6	5,640	17.0
1982 ..	8,60,178*	0.8	7,500	33.0
1983 ..	8,84,731*	2.9	8,250	10.0

* Tourist arrivals from Pakistan and Bangladesh not included.

Source : Financial Express, 25th July, 1984.

The increase in foreign tourist arrivals and earnings is a continuous phenomenon in spite of a rise or fall in the rate of growth. The per centage growth of foreign exchange earnings shows a declining trend, though total earnings in 1983 have netted Rs. 825 crores, thereby achieving the second biggest foreign exchange earner position for the tourism industry. An absolute low number of foreign tourist arrivals is not a correct index of India's holiday image. A tourist spends on an average about 21 days in India as against the world average of only 4 days. Reckoned in terms of number of arrivals and days spent, 8,84,731 tourists in India in 1983, are equivalent to an impressive 6 million.

Domestic Toursim

It has been realised that side by side to foreign tourist promotion, Indians should also be encouraged to undertake tours within the country so as to extend the tourist trade. Hence it is highly imperative that domestic tourism, which forms the bulk of the world tourism should receive the attention it deserves. With a view to diversify and develop domestic tourism during the current decade, the Union Government in consultation with the states and union territories, has identified 61 travel circuits with 441 tourist centres for intensive and integrated development. Under this scheme, facilities are to be developed at tourist centres and places en route falling along the identified travel circuits. These are in addition to the existing national travel circuits which will continue to be developed further to cope with the increasing tourist traffic, both international and domestic. As there is no uniformity of demand in facilities and services among the foreign and domestic tourists, it is therefore, essential that the requirements of the domestic and non-affluent foreign tourists are carefully incorporated in the tourism development plans. The domestic tourists number is growing rapidly and is at present estimated to be around 50 to 60 million per annum. These tourists require the basic ' modern ' amenities but cannot afford deluxe or first class hotels. Hence there is an urgent need to create appropriate facilities in order to cater to this ever increasing class of domestic tourists.

Tourism and Hotel Industry

The hotel sector is the heart of the tourism industry. A good hotel is a second home. Mr. M. S. OBEROI, the hotelier and President of honour for life of the Federation of Hotel and Restaurant associations of India, observed in his 'Profile of a Hotelier' that a 'Hotel is a small nation in itself.' A hospitable hotel is indeed a standing ambassador of a country's cultural image. The hotel sector's crucial position in tourism promotion is established beyond doubt by the foreign exchange earnings it is capable of bringing in. It is estimated that hotels and restaurants directly earn about 49.7 per cent of the total foreign exchange earnings from tourism. Thus, out of the aggregate foreign exchange receipts of Rs. 3,335 crores from tourism in 1978-83, more than Rs. 1650 crores were contributed by the hotel sector. India has a highly developed hotel industry and today it has attained professional efficiency and excellence which is comparable to the best in the world. If fact, Indian expertise in hotel industry is eagerly sought in many developing countries.

Prior to World War II, there were very few hotels in India. During 1940's, the hotels and restaurants in larger cities mushroomed, as they did a brisk business on account of a larger number of foreigners in the country, but the number of hotels was still insignificant by any standards. Same condition prevailed even after Independence. When the first organised count of hotels was made in 1962-63, the total number of guest rooms in 186 hotels on the approved list was a mere 7,085 rooms. Incidentlally, it was in the same year that hotels were classified under the 'Star' system. By 1982, the number of approved hotels in the country went up to 405 and the room capacity to 29,332 which was in addition to the growing number of unapproved ones. But this increase in hotel rooms and other supplementary forms of accommodation such as youth hotels, camps and huts in holiday resorts and wild life sanctuaries has not kept pace with the demand. While the number of international tourist arrivals increased from 141 thousand in 1963 to 860 thousand in 1982—an increase of 510 per cent—the number of rooms in the approved hotels has gone up from 7,085 to 29,332—an increase of 314 per cent only. Hence the paucity of rooms in all categories of hotels combined with the gross imbalance in the distribution of hotels in tourist centres have certainly hampered the country's tourism developmental efforts. The following table is the category-wise list of government approved hotels in India as on 1982.

Government approved Hotels in India, 1982.

Category	No. of hotels	No. of rooms	Average occupancy rate (%)
Five-star ..	20	6,065	79.0
Four-star ..	20	1,469	66.5
Three-star ..	63	3,144	66.9
Two-star ..	80	3,305	68.6
One-star ..	42	1,346	71.8
Unclassified yet ..	171	14,003	59.1
	405	29,332	70.2

Source: Statistical outline of India, 1984.

The poor performance in hotel construction activity is the outcome of the belated recognition of the tourism industry by the Ministry of Tourism and Civil Aviation. The cost of constructing hotel rooms has gone up considerably in recent years. Besides the industry also has to undergo a long gestation period that must elapse before the hotels become productive. While the unit value of the required investment in hotel industry is very high, the institutional financial assistance to this industry has been very meagre and there is a large credit gap which needs to be filled. The high incidence of taxation, high price of land and its non-availability in suitable areas have also joined forces to daunt the private investor and unless this industry is placed in its correct perspective in tourism development efforts, the prospects of adequate hotel accommodation being created in order to meet an estimated arrival of 3.5 million tourists by 1990, appears to be bleak.

On its part, the hotel industry should make efforts towards resource mobilisation by increased earnings and conservation of internal finances through expenditure prunning and tax planning. The Union government has taken the following steps with a view to enable the hotels augument their internal finances and foreign exchange earnings: (i) attractive tax concessions have been given under the income tax act through liberal depreciation on building, plant and machinery and tax holiday on a portion of profits of new hotels and hotels in rural areas, (ii) as per the notification issued on August 22, 1981, it is obligatory for foreign tourists to pay their hotel bills for lodging, boarding and service charges in currencies of 26 foreign countries, and (iii) the hotel receipts tax imposed in 1981 on gross receipts of hotels—in which the room charges per day per individual were Rs. 75 or more has also been abolished since March 1982, as a result of its adverse effect on tourist traffic.

Today's tourist is intelligent and calculating. He thinks not only in terms of cost but also value for money. According to a recent study, hotels in India have ceased to be cheap as they used to be in the past. Some of the Five-star hotels have reached international standards in the matter of charging their customers. Hence the hotel industry should concentrate on building accommodation which is moderately priced, functional, clean and aesthetically satisfying. This is particularly important since tourists from the third world Afro-Asian countries are not affluent and therefore are in need of star hotels.

It also needs to be emphasised that a tourist need not necessarily be a foreigner. Indeed with the spread of education, leave travel facilities and the emergence of several other factors, the number of domestic tourists from the middle class is rising rapidly. Presently the needs of the middle and lower income bracket tourists are woefully ignored, despite the fact that low priced accommodations have comparatively higher returns.

Hotels can play an important role only if they can absorb the influx of visitors and this they can do by offering them what they require and by catering to all income groups. The hoteliers should be prepared to sacrifice their short-term gains, since they are, and can be instrumental in reducing the overall package cost, which ultimately is the decisive factor for increasing tourism.

Tourism and Travel Agency Business

Corresponding with the boom in tourist traffic, tourist servicing industries have been experiencing a mushroom growth. Commencing its activities in the pre-war era, basically to serve British families settled in India, the travel agency business has come a long way to become an indispensable part of Indian tourism development programme. By channelizing all the services essential for a tour programme through a single organisation, the travel agency business has served to minimize the complications generally associated with travelling. Travel agents with their elaborate business network spread all over the country, market services that are invaluable for the development of tourism. Their services are geared towards developing the infrastructure at home and launching marketing efforts overseas.

The organised core of Indian travel agency business is a small fragment compared with the unorganised small agencies that have mushroomed all over the country. As the travel agency business earns valuable foreign exchange for the country, it must be nurtured and fostered with liberal taxation and other incentives. Also top priority must be given in building professionalism in travel agency business.

Transport

Although majority of the tourists come by air, they prefer to travel by road to various tourist destinations. This mode of travel is cheaper and enables them to see the country much better. India has one of the largest network of roads connecting all major cities with towns and other places of tourist interest. A major handicap faced by tourists in respect of transportation is the absence of guaranteed reservation in railways and airways. Both the air and rail links should be upgraded and streamlined so as to provide quick travel facilities. Another very serious shortcoming facing India's tourism effort is the lack of air-conditioned cars and coaches. While the recent decision of the Ministry of Tourism to import 200 air-conditioned coaches for use by tour operators is to be welcomed, it amounts to a very insignificant part of the total requirements.

Despite the development of infrastructural facilities to a considerable extent there are certain pockets of tourist attraction which still remain inaccessible to foreign tourists, due to lack of basic infrastructure. If India has to attain the tourism targets that she has set for herself, better lodging and transportation facilities, whose absence eats into the hearts of all endeavour, must be provided.

To conclude, in order to maximise the positive effects of tourism, an inter-disciplinary and integrated planning is essential. Hence there is greater need for co-ordination betwean private and public sectors and between local, regional and national levels so that the country could reap the economic benefits of tourism.

Date of Accounts : 31st December.

U.P. HOTELS LIMITED

INCORPORATED in 1961. **Directors :** A. C. Mahtab,, Krishna Narain, Brij Narain, Birendra Kumar, C. D. Khanna, Inder Sharma, L. P. Gupta, M. V. Muthu, Smt. Rekha Gupta, O. Terang, Lt.-Col. G. H. Simoes, Sushil Kumar and Brijpal Das. **Secretary :** P. D. Gupta. **Registered Office : cum Operational Head Quarters :** 1101, Surya Kiran Building 19, Kasturba Gandhi Marg, New Delhi-110 001. Telephone : 351267. Telex : 031-2447. Telegram : ' UPHOTEL '. **Auditors :** Messrs. Ray & Ray.

Objects and Activities : Hoteliers and importers and exporters of textiles and handicrafts. The hotels are (1) Hotel Clarks Shiraz at Agra. (2) Hotel Clarks Avadh at Lucknow and (3) Hotel Clarks Amer, at Jaipur.

CAPITAL : Authorised : Rs. 1,50,00,000 in 11,50,000 Equity shares of Rs. 10 each, 35,000 Preference shares of Rs. 100 each, **Paid-up :** Rs. 1,26,40,000 in 10,64,000 Equity shares of Rs. 10 each and 20,000 Preference shares of Rs. 100 each.

Date of Accounts : 30th September.

~~ASSAM BENGAL CARRIERS LTD.~~

ABC INDIA LTD.

We outgrew our name. Assam Bengal Carriers Ltd. has changed its corporate name to ABC INDIA LTD. for some very good reasons. Our old name implied that our services were concentrated in Assam and West Bengal only. They're not. With over 150 branches across the country, our services span a wide spectrum, meeting the new demands of changing and challenging time. That's why we chose a new name that fits. ABC INDIA LTD.

ABC

ABC INDIA LTD.

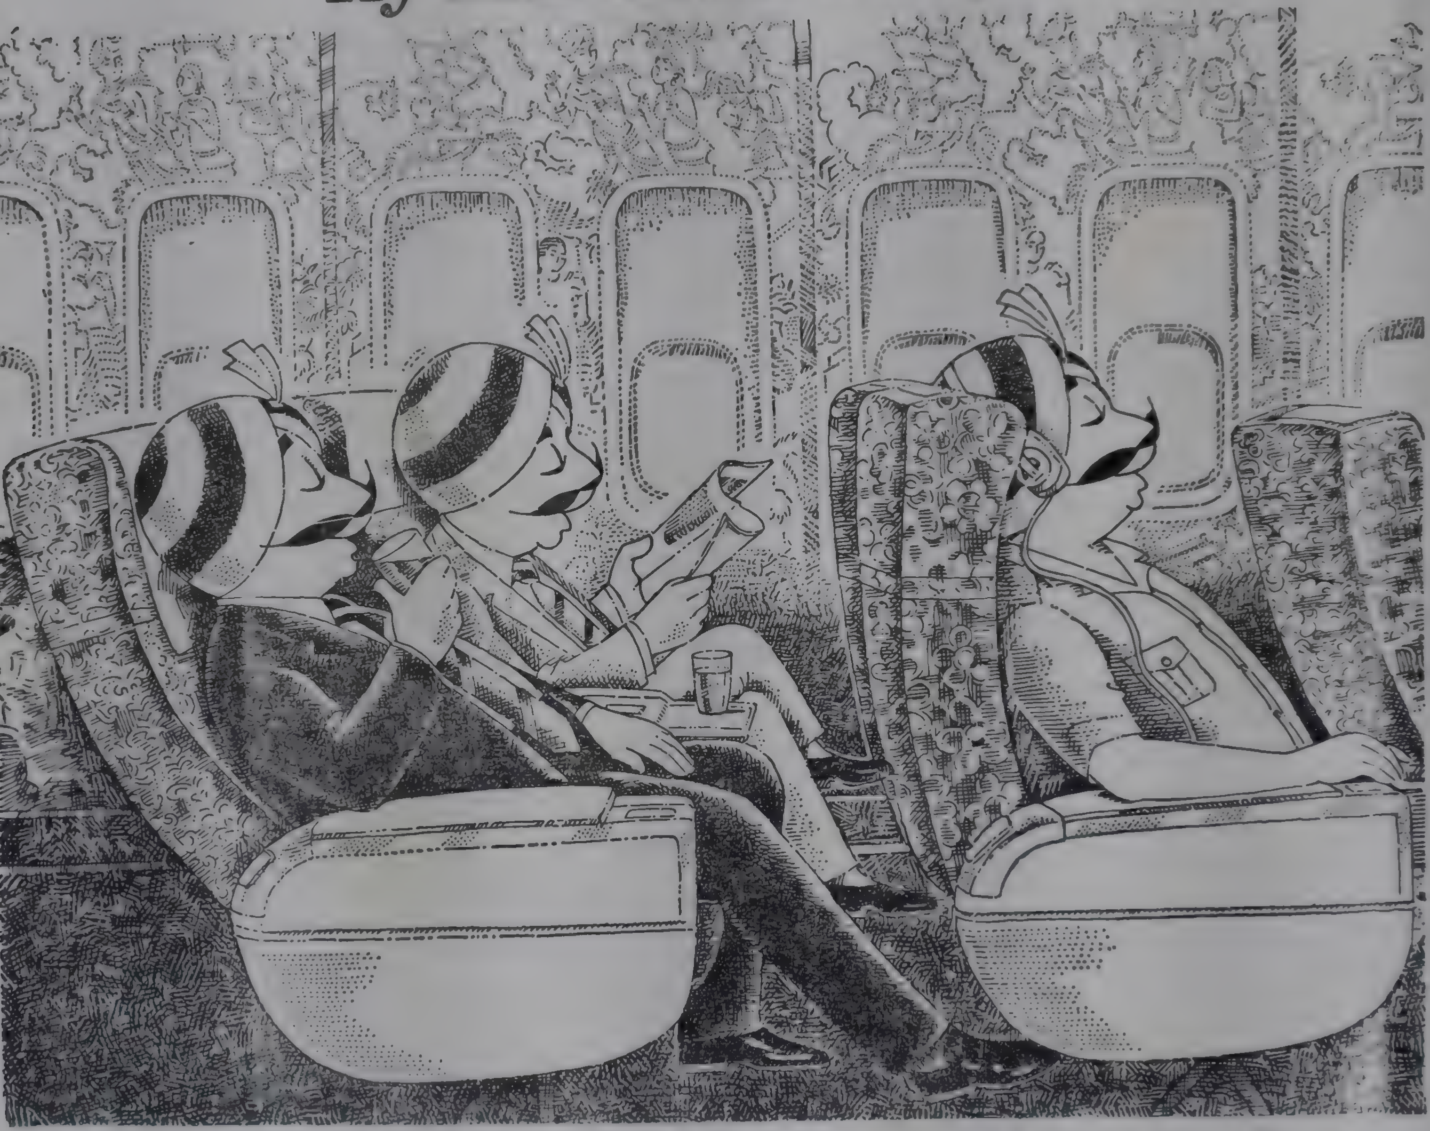
Regd. Office: Fancy Bazar, Gauhati 781001

Your goods on time, everytime

PRESSMAN

Transport

If you're flying Executive Class, fly like a Maharajah.



More legroom. More elbowroom. More comfort.

It's a business proposition worth thinking about.

Every seat either a window or an aisle seat. The seat itself is plush and spacious—measuring up to the most exacting standards.

Nine comfortable inches on the armrest helps you get in some last minute work.

There are a couple of bonuses too.

Complimentary drinks to help you unwind. Followed by a selection of delicious Indian or Continental cuisine served by gracious sari-clad hostesses.

The next time you fly abroad on business consider what a great deal you're getting.

Including what you can take home... lovely memories of Air-India's Executive Class — on all 747 routes.

AIR-INDIA

The airline that treats you like a Maharajah

AIR-1800

TRANSPORT

TRANSPORT virtually constitutes the nervous system of an economy, carrying raw materials to the production centres and moving out the finished goods to the markets, thus energising every economic unit into activity, and perpetuating the flow of goods. It broadens the market, fosters optimum factor utilisation, promotes greater division of labour and facilitates labour movement towards better and more gainful employment. It breaks geographical barriers and opens up new vistas, reserves and potentialities of production. Transport gives accessibility to remote regions, provides them with vital links with centres of activity and directs beams of the new light of progress on backward areas. The development of an efficient transport system is therefore a *sine qua non* to the development of an economy.

Transport Planning in India

The bulk of passenger as well as freight traffic, in India is carried on by rail and road transport while the airways, coastal shipping and inland water transport account only for a small proportion of the total traffic.

The Indian planners have adopted an integrated planning approach for the future. Balanced attention is being given to various and sometimes competing segments of transport like freight and passenger traffic, industrial and agricultural needs, rural and urban requirements, and so on. The planners' policy is to give special emphasis to provision of transport facilities at reasonable cost to remote and isolated areas like the North Eastern region, Andaman and Nicobar islands, etc. Priority is generally given to freight traffic in situations of scarcity, while at the same time minimum requirements of passenger traffic are catered to for avoiding serious inconveniences to travelling public.

Urban Transport

Over the years, problems relating to urban transport have tended to become more and more complex due to massive increase in needs as well as the growing shortage of resources. Due to the growth in population and migration from rural to urban areas for employment purposes, the pressure on metropolitan transport has been extremely heavy.

It is felt that the experience in the western world of providing rapid, heavy-cost suburban transport has not been entirely successfully, having resulted in the creation of satellite towns with an ever-increasing traffic in commuters, travelling in vast numbers during peak periods from the suburbs to the central business districts and back. During the Sixth Plan period the policy contemplated was to pursue the question of the development of 'counter magnets' beyond commutable distance in the shape of self-contained residence and business complex through suitable incentives. The newly evolved urban transport policy, therefore, was to keep this in view and avoid schemes that would encourage further growth of existing, or development of new, dormitory type of satellite towns. Subject to these, urban transport facilities are planned to be augmented to the maximum feasible extent.

Our planners have evolved certain priorities and promotional programmes. Accordingly, development of the transport sector is to be along the following lines : (1) To remove transport bottlenecks hampering the movement of industrial and agricultural goods and the promotion of international trade ; (2) To create additional capacity to meet anticipated traffic requirements ; (3) To develop transport system that would enable maximum conservation of energy ; (4) To evolve a high degree of coordination within the transport section and with the user organisations, to make optimum use of available capacity ; (5) To give priority to the completion of on-going schemes ; (6) To evolve a rational pricing structure in the public sector transport undertakings so as to make them viable ; and (7) To give special attention to the transport need of remote and isolated areas

ROADWAYS

The Indian road network is now one of the largest in the world. Initially our road system developed mainly around four main trunk roads connecting Khyber with Calcutta through Delhi, Calcutta with Madras, Madras with Bombay and Bombay with Delhi. These were used mainly for military movement, and road building otherwise suffered general negligence due to paucity of funds, of building materials and official apathy.

With the plan era began the systematic development of a road network. In 1951, when the First Five-Year Plan was launched, there were about 97,000 miles (1,56,000 km) of metalled roads and 1,50,030 miles (2,41,395 km) of unmetalled roads. During the First Plan Rs. 135 crores was allotted for the construction of 24.000 miles (38,623 km) of metalled roads and 41,000 miles (65,981 km) of unmetalled roads. The allotment in the Second Plan was Rs. 228 crores and at the end of the period the mileage of surfaced roads rose to 1,44,000 miles (2,31,739 km) and that of unsurfaced roads to 2,50,000 miles (4,02,325 km). The Third Plan carried out the implementation of the Hyderabad Plan. The Hyderabad Plan was drawn up by the Chief Engineers of the States and the Centre and aimed at bringing every village in a well-developed agricultural area within 4 miles (6.4 km) of metalled roads and one and half miles or 2.4 km of any road. The Third Plan envisaged an outlay of Rs. 828 crores and special attention was paid to road development in rural areas. While the Annual Plans earmarked Rs. 610 crores for road and road transport development the funds allocated in subsequent plans wer stepped up. These have been tabulated below

TABLE 1

Fourth Plan	..	1898	64
Fifth Plan	..	2059	45
Sixth Plan	..	4634	48

Source : Government of India—Five Yea Plans.

The total road length comprising nationa highways, state highways and other state PWD roads is 7.24 lakh km. The road developmen programme envisaged under the 1980-85 draf plan laid emphasis on a coordinated and balance development of road network in the countr under : (i) primary roads comprising nationa highways : (ii) secondary and feeder road system covering state highways and major district roads and(iii) rural roads including village roads and othe district roads. Substantial outlays were propose for road development in the rural and triba areas. The importance of road transport is thu recognised by the Sixth Plan document : ' Beside being an important component of the basi infrastructure for the economic development o the country, they also generate considerable employment. Roads provide a very effective means of transport for the movement of goods and passengers over short and medium distances and to some extent, even over long distances at least for certain special commodities governed by users' preference. Within an integrated rural development programme, rural roads are proposed to be assigned a comparatively higher priority so as to bring thousands of our villages into the national mainstream.'

The following are some of the targets fixed by the Sixth Plan, keeping in view the deficiencies existing in our national highways : Construction of 196 km of missing links, nine major bridges, double laning with or without strengthening 4244 km ; widening to four lanes of 130 km of roads and 52 bypasses.

National Highways

The Central Government is directly responsible for the national highway system. In accordance with the decision taken at the conference of chief engineers convened in 1943 at Nagpur, the Government of India assumed since April 1947, complete financial responsibility for the development and maintenance of certain roads provisionally approved by them for inclusion in a system of national highways.

The main object behind this was to develop the major trunk roads of the country and to give relief to the states so that they could concentrate more on the development of other categories of roads. Thereafter in 1956, the Government enacted the National Highway Act and statutorily took over the roads classified as National Highways.

As of now, our national highways measure 31,358 km and constitute 4.3 per cent of the total surfaced road length in the country. However, they are reportedly bearing around 30 per cent of the total volume of road traffic, since these are veritably the main trunk routes of our road system.

Missing Links

In 1947, approximately 2500 km of roads called missing road links and thousands of culverts and bridges which did not exist, were required to be constructed in order to have a continuous and integrated road network. There was an increase in the missing road links owing to the addition of new roads to the national highways system in subsequent years. Upto the 31st March, 1982, missing roadlinks including diversions constructed totalled 4474 km and the number of major bridges constructed was 368. Also there remain a number of over/under bridges across railway lines. It is estimated that even a modest investment of Rs. 500 crores on the major arterial routes would bring in an annual savings of Rs. 70 crores in the operating costs of vehicles and reduction of one lakh kilo litres in fuel consumption.

The Indian performance in the vital area of national highways has been quite poor. In the last 37 years since independence there has been only a meagre addition of 9918 km. The present length of 31,358 km falls considerably short of the target of 51,200 km set in the Chief Engineers' Road Development Plan of 1961-81.

Even this primary road system of national highways suffers from a number of deficiencies. The conditions of these highways most of which are 80-100 years old are quite deplorable. Also, despite the recognised necessity for these highways with given traffic intensity to be multi-laned or at least double-laned, 37 per cent of these continue to remain as single-lane routes. According to an expert assessment, about 8000 km of national highways are urgently required to be converted into double-lane routes. Another 2000 km need to be widened from double lane to a four-lane system. Due to paucity of funds, only 25 per cent of the former and 15 per cent of the latter could be targeted during the Sixth Plan period.

However, it has to be mentioned that the importance of the economic infrastructure of the country has been well-appreciated in India as far as project sanctioning is concerned, but the problem lies in poor execution. The following Table highlights the growth in total road length in India between 1979 and 1982.

TABLE 2

Road Length in India

	1979	1980	1981	1982
		('000 kilometres)

Unsurfaced	981	971	945	1010
National Highway	29	31	31	31

Source : 'The State of the Nation' published by Tata Economic Consultancy Services India, 1984.

During the Sixth Plan period, the Central Government, responsible for national highways was scheduled to spend Rs. 830 crores on projects such as widening, double-laning, strengthening bridges, etc. The actual expenditure in the first three years of the Plan was Rs. 387 crores which is below the targeted level and estimated outlay in the 4th year of the Plan viz. 1983-84 was also below Rs. 150 crores. This is said to be practially due to financial stringency and partly to the higher prices of inputs such as bitumen, steel, construction machinery etc. The plan for State Governments envisaged an outlay of Rs. 2609 crores of which Rs. 1165 crores was for the construction of village roads under the Minimum Needs Programme. Implementation is behind schedule in about one-third of the States. Of the total number of villages in India, more than one-half are not connected by any road. The Sixth Plan aimed at building road links with 20,000 of these. In the first 3 years of the Plan, work in respect of 11,270 villages is reported to have been completed.

Work on construction as well as maintenance of roads needs to be geared, for the present state of affairs is not satisfactory. As per projections, by the turn of the century, the road network will be required to carry 600 billion tonne-km of goods traffic and 700 billion passenger-km of passenger traffic compared with about 200 billion tonne-km of freight and 500 million passenger-km of passenger traffic today. Also, it may be noted that since independence, while the country's road network length had only quadrupled, the goods and passenger traffic have gone up 14 times and 12 times respectively.

A draft Indian Road Development Plan 1981-2001 has been drawn up incorporating what is being termed as a radical 'departure from the earlier plans.' This plan conceived of a new generation of roads comprising of express ways and four-lane divided carriageways for the arterial routes and emphasised the need to achieve full connectivity to all the villages by the turn of the century.

TABLE 3

Villages Connected with Roads

	Villages with Population range			
	Less than 1000	1000-1500	Above 1500	Total
Total Villages	465.9	56.6	69.3	591.8
Villages connected with roads	167.1 (35.9)	34.4 (60.8)	56.4 (87.4)	258.0 (43.6)
Of which :				
All-weather roads	98.0 (21.0)	24.6 (43.5)	42.5 (61.3)	165.2 (27.9)
Fair-weather roads	69.1 (14.8)	9.8 (17.3)	13.9 (20.1)	92.8 (15.7)
Villages not connected with any road	298.8 (64.1)	22.2 (39.2)	12.9 (18.6)	333.8 (56.4)

Figures in brackets show percentages to total villages.

Railroad Co-ordination

An important point to be given attention while building roads is the effective coordination between railways and roadways. Regrettably however, in the case of a substantial section of our road system, roads run parallel to the railway thereby duplicating services and creating conditions of competition. Our planners must ensure that these two primary systems of transport supplement each other. Roads should cater preferably to short and middle distances and remote areas inaccessible to railways and serve in connecting production centres and railways which should take over from then on for long distance transportation. A co-ordinated perspective planning is necessary in rail and road building in view of the fuel economy and other advantages of mass transportation.

Express Highways

Four express highways have been built in India for faster movement of traffic. Two are in Bombay—the Eastern and Western Express Highways. The Third runs between Calcutta and Dum Dum airport and the fourth between Sukinda mines to Paradip port. Work is in progress in respect of a fifth express highway which will be approximately 100 km in length connecting Durgapur and Calcutta.

International Highways

There are two categories of International highways. The first are the main arterial routes linking the capitals of the countries and the second are routes joining main cities, ports etc. with the arterial network.

The main arterial highway links India with Lahore in Pakistan and Mandalay in Burma running through Amritsar-Delhi-Agra-Calcutta-Golaghat-Imphal. The two link hgihways are one through Agra-Gwalior-Hyderabad-Bangalore to Danushkoti and the other from Barhi to Katmandu. The other links will be Agra-Bombay; Delhi-Multan ; Bangalore-Madras ; Golaghat-Zedo.

World's Highest Road

The road from Manali in Himachal Pradesh to Leh in Kashmir runs at an average altitude of 4,267 metres (12,000 ft.) and negotiates four very high passes varying from 16,000 to 18,000 feet.

Border Roads

The Border Roads Organisation (BRO) was created in 2980 to accelerate the economic development of the north and north-eastern border areas by making them accessible through the development of arterial routes. The Organisation has provided an arterial network of cods in difficult and inhospitable border areas and scaled many heights. It has to its credit and in its present programme construction improvement of over 17000 km of roads and has 14000 km of roads under its charges for maintenance.

The BRO has steadily increased its area of operations from eight States and Union Territories in the early Sixties to seventeen at present. It has also diversified its activities into related areas of construction.

Road Transport in India

Road Transport is now undertaken by State Governments, private operators and cooperative agencies. Since independence, most State Governments have entered the field of road transport and have nationalised the bus transport either completely or partially. Goods transport however, continues to be almost exclusively in the hands of the private sector. Taking all States together, nationalised bus services now account for about 41 per cent and more routes are expected to come into the Government purview.

National Permit Scheme

Constraints on movement of vehicles have been innumerable. For removal of these constraints and for the sake of better efficiency, a system of national permits was introduced. Under the system, the Union Government specifies the number of national permits each State or Union

Territory can issue. About 5300 permits were issued initially. The national permit scheme makes the long distance movement of goods vehicles from one zone to another smooth and free of hold-ups. The Inter-State Transport Commission, responsible for the development, coordination and regulation of road transport services on inter-state routes, has helped the states in making reciprocal arrangements for operation of goods and passenger services on inter-state routes. It has introduced zonal permit scheme for the unhindered movement of a limited number of public goods carriers over national and state highways on payment of tax at a single point. The National permit scheme will carry this process considerably further.

In a basic sense, road and rail are complementary to each other as modes of transportation. While rail movement is suitable for long hauls of staple commodities and long passenger journeys, road transport is ideal over short distances. It is virtually a feeder service to rail transport in areas not served by the other. Flexibility of operations is the hallmark of road transportation, and in the case of passenger traffic, it means freer mobility. In the total volume of traffic, haulage by road steadily improved its proportion, till a peak was reached in 1974-75, i.e. from 11 per cent in 1950-51 to 35 per cent in 1974-75. Thereafter there was a slight decline and the present figure is believed to be around 32 per cent. In case of passenger movement the proportion increased from 26 per cent to 61 per cent in the said period, followed by a decline to around 59 per cent.

Broadly, it may be said that there is more bus travel than train travel in India but as regards goods traffic haulage in railway wagons is twice as much as in truck. However, transportation by road is utilised more for the movement of merchandise than passenger traffic. Trucks plying on our roads number thrice as many as buses. Also since 1950-51, the number of trucks has increased by 600 per cent whereas buses have increased only by 385 per cent. Within the field of passenger transportation, excluding private cars and taxis, the public sector has been the major operator, the state undertakings accounting for 58 per cent of the national bus fleet.

There are 54 transport undertakings in India, the public sector running 74000 buses and 2000 trucks with a capital investment of Rs. 2437 crores and employing a 570,000 strong workforce. However, most of these undertakings are in financial and operating difficulties. It is unfortunate that the objectives for which nationalisation measure was adopted in 1950 viz. the provision of an efficient, adequate, economical and properly coordinated system of road transport services have not been achieved and the public transport undertakings have been plagued by widening deficits and generally inadequate fleets in view of mounting costs of operation and the necessity for low-pricing in public utility systems.

Another important factor affecting the finances of transport operators is the high incidence of indirect taxes which pose too heavy a burden for their slender operating margins. According to the National Council of Applied Economic Research (NCAER), the tax on road transportation is so high, that it constitutes by itself the major factor stifling the growth of the industry. The taxes are heavy and innumerable : import duty, sales tax, registration fee, vehicles tax, sales tax on spare parts, tolls and octroi together make for an insufferable burden. The tax content in the operation costs of a truck is as high as 43 per cent. Excessive taxation has led to the vicious circle of overloading-gratification in the industry. Small operators, who form 99.4 per cent of the operators in the country, are able to avoid losses only by overloading and thus the tax element becomes a definite disincentive to the healthy development of road transport. The very high cost of operation is also due to the bad road conditions prevalent in India. Bad roads are responsible for accidents, heavy wear and tear of tyres and other parts as also high fuel consumptions.

Some transport corporations have been forced to diversify in order to overcome financial difficulties, though the measure means going beyond the role visualised when passenger transport was nationalised. Also they are faced with the problem of escalating costs. Cost problems not only relate to acquisition of fleet and inflation but to inventory also—the inventory of spare parts carried is said to be of the order of Rs. 5000 per vehicle. Another regrettable aspect is that handling of labour has become difficult. Most Corporations are over-staffed and are faced with hefty wage bills, compounded by strikes and political interference.

All these make a strong case for a restructuring of the organisations to give the managements greater autonomy. It is desirable that an element of competition be introduced, even if it means that the proportion of Government-run scheduled services is reduced and that of private services increased.

RAILWAYS

The Indian Railways may be veritably described as the nation's lifeline. Railways in our country had their modest beginning in 1853 when the first epoch-making locomotive steamed out of Bombay on a 34 km stretch to Thana. In the next year another line was opened in Calcutta. Needless to say that the development of Indian Railways went hand in hand with industrial progress in the country. By 1900, nearly 25,000 miles or 40233 km of rail tracks had been laid. Railway construction however slackened thereafter and in the next 50 years only 10000 miles (or 16090 km) were laid.

Originally, the railways were operated by private companies owned by Englishmen. On 1st January 1925, the Government of India took over the East India Railways and gradually the other companies were also nationalised. By 1950, railways in the former princely states were taken over and the Indian Railways became a unified state enterprise. It is the country's biggest nationalised undertaking and the investment in railways is larger than all the private joint stock companies put together with a route kilometrage of 61,230 (as in 1982) the Indian Railways have become Asia's largest and the world's fourth largest railway system.

The Indian Railways operate on three guages—broad guage, metre guage and narrow guage. The operational fleet consists of around 11,000 locomotives, 38,000 coaching vehicles and 3,92,000 wagons. Indian Railways had total assets of more than Rs. 8164 crore as on 31st March 1982 and a staff strength of nearly 16 lakh regular employees apart from 2.3 lakh casual labour. They carry an annual passenger load of approximately 370 crores and over 24 crore tonnes of freight traffic. Indian Railways run about 11000 trains every day connecting 7072 stations. Since the beginning of the planning era both passenger and goods traffic have witnessed an enormous growth in terms of volume and value. In the period 1950-51 to 1981-82, passenger traffic increased by 189% and goods traffic by 164%. The following table would illustrate the point.

TABLE 5

Progress of Railways in India

Year		Route length (km)			Running Track (km)	Passengers originating (lakhs)	Goods, originating (lakh tonnes)
		Electrified	Non-Electrified	Total			
1950-51	..	388	53,208	53,596	59,315	12,840	930
1960-61	..	748	55,499	56,247	63,602	15,940	1,562
1965-66	..	2,423	55,976	58,399	68,375	20,820	2,030
1970-71	..	3,706	56,084	59,790	71,669	24,311	1,965

Source : India—A Reference Annual 1983.

Passenger Traffic

In 1981-82, the volume of passenger traffic was over 37 crores as against 12.8 crores in 1950-51. The earnings from second class passengers alone had risen to a level of Rs. 871 crores from Rs. 84.47 crores during the same priod. It is said that the second class passenger constitute 97 per cent of the total passenger traffic. The average rate charged per passenger for every kilometre is said to be 3.03 paise (ordinary) and 5.42 paise (mail /Express) for second class passengers, 14.1 paise for first class and 39.4 paise for air-conditioned class passengers.

Goods Traffic

The Railways carried more than 25 crores tonnes of goods in 1981-82 as compared to 9.3 crore tonnes in 1950-51. The freight revenue during 1981-82 was Rs. 2250.34 crores in 1981-82. To speed up freight movement many fast goods trains have been introduced on important routes. Some of the principal commodities carried by the Indian Railways during 1981-82 were coal (8.88 crore tonnes), metallic ores excluding manganese (2.97 crore tonnes), foodgrains (2.15 crore tonnes) mineral oil (1.66 crore tonnes), iron and steel (1.2 crore tonnes), cement (1.08 crore tonnes) and chemical manures (9.57 crores tonnes).

A container service is also operated to provide door-to-door service. The containers are carried on guaranteed schedules by fast goods trains· Another significant achievement was the introduction of container service linking India and Nepal for the movement of Nepalese cargo.

Administration

The responsibility of administration and management of railways rests in the Railway Board under the overall supervision of a Cabinet Minister. The Board consists of a Chairman who is the ex-officio Principal Secretary to the Government of India in the Ministry of Railways, a Financial Commissioner and 3 other members, who are all ex-officio secretaries in Govt. of India in the Ministry of Railways.

The Railways are divided into nine zones, each headed by a General Manager who is responsible to the Railway Board for operation, maintenance and financial matters.

The nine zones with their headquarters and route kilometres in brackets are : Central (Bombay—VT 6309), Eastern (Calcutta : 5204) Northern (New Delhi 10,972), North-Eastern (Gorakhpur : 5163), North-East Frontier (Maligaon-Guwahati, 3613), Southern (Madras, 6703) South Central (Secunderabad, 6932), South

Eastern (Calcutta, 7041) and Western (Bombay-Churchgate, 10,293). To secure cooperation between the public and the railway administration various committees have been set up. These include National Railway Users' Consultative Council, Zonal Railway Users' Consultative Committees and Divisional Railway Users' Consultative Committees.

Rolling Stock and equipment

Railway locomotives are built in Chittaranjan Locomotive Works, Chittaranjan and Diesel Locomotive Works, Varanasi, both of which are administered by the Ministry of Railways. Chittaranjan Locomotive Works (CLW) produced its first engine in 1950-51. In December 1971, it produced its last steam engine taking its total production to 2351 units before it switched over to the manufacture of mainline electric and diesel hydraulic shunting locomotives. During the same period most of the metre gauge steam engines were built by TELCO, a private sector firm. The CLW turned out its first DC electric loco in 1961-62 and the first diesel hydraulic shunter in 1967-68. Overall production till March 1982 totalled 878 electric locos, 424 diesel-hydraulic shunters and 49 narrow guage diesel hydraulic locos.

Diesel electric mainline locos as also heavy duty shunters are built by the Diesel Locomotive Works (DLW). The Unit commenced production of broad guage locomotives in 1963-64 and from 1968-69 it started manufacturing metre-guage locomotives. Upto March 1982, this unit had delivered 1608 locomotives of various types.

Passenger service vehicles are manufactured mainly by the Integral Coach Factory (ICF), Madras, which is also administered by the Ministry of Railways. The production of the ICF is supplemented by two public sector undertakings, Bharat Earth Movers Ltd. and Jessops. These three undertakings together met the entire requirements of the Railways in respect of passenger service vehicles. The ICF commenced production of passenger coaches in 1955-56 and uptill March 1982, turned out 13,410 fully furnished coaches. The production of ICF and Jessops includee Electric Multiple Units (EMU) also. The electrical equipment for these are manufactured by the Bharat Heavy Electricals Ltd.

Both public and private sector units take care of the wagon requirements of the railways. The railway repair workshops supplement the production of these units. In 1981-82, such production totalled 17,362 wagons in terms of four wheelers. Wheels and axles required by the railways are at present manufactured only in part by indigenous suppliers and the rest is imported. In order to curb a heavy drain on foreign exchange on thier account, a wheel and axle plant is being set up at Yelahanka, Bangalore. The envisaged annual production is approximately 70,000 wheels and 23,000 axles per year.

The Indian Railways are making continuous efforts towards modernization. The electrified route length has increased more than 14 times since 1950-51. Steam locomotives, production of which was discontinued from 1972 onwards, are being gradually replaced by electric and diesel locomotives. Since the beginning of the Five Year plans, the number of diesel locomotives has gone up by more than 147 times from a mere 17 in 1951 to 2515 in 1981-82. Electric Locomotives production during the same period has gone up by more than 14 times from 72 to 1104,

Source : INDIA—A Reference Annual.

Diesel and electric locomotives together carry the bulk of the goods moved by railways. For instance, in 1981-82, these two catagories moved 93.7 per cent of the total goods traffic in terms of gross tonne km. Modernization and improvement of telecommunication and signalling have also made much headway. In 1981-82, the multi-channel microwave link was in operation on 13,441 km. The Indian Railways have also made good progress in attaining self-sufficiency in respect of equipment and stores. At the beginning of the plan era, 23 per cent of equipment and stores were being imported ; such imports were reduced to 8.7 per cent by 1982.

Research and Training

With a view to attaining self-sufficiency in the designing and manufacture of railway equipment, the Research, Design and Standards Organisation (RDSO) was set up in 1957 through the merger of the Central Standards office and the Railway Testing and Research Centre. It has its headquarters at Lucknow with branches at Lonavla and Chittaranjan. The RDSO has assisted railways in the indigenisation of all fields of railway operations and has also enabled the export of a number of items of railway equipment. It has recently produced an all-aluminium overhead equipment for railway electrification, which is the first of its kind in the world. In the field of locomotion RDSO has evolved several innovative designs for successful adoption. The railways have 4 major training institutions viz. Railway Staff College, Vadodara ; Indian Railways Institute of Advanced Track Technology, Pune ; Indian Railways Institute of Signal Engineering and Telecommunication, Secunderabad and the Indian Railways Institute of Mechanical and Electrical Engineering, Jamalpur. These institutes also train foreign officials.

Also, the Indian Railways have two organisations in the public sector engaged in the provision of high level consultancy services in rail technology and execution of railway projects. These are the Rail India Technical and Economic Services (RITES) and the Indian Railways Construction Company (IRCON).

Railways under the Plans

With the objective of expanding railway traffic in such a way as to avoid bottlenecks in the production process and to ensure an efficient rail transport system, the Five-Year plans devoted considerable attention to the development of Railways. The special objectives over successive plan periods for Railway development can be traced as follows :

First Plan : Rehabilitation and replacement of over-aged assets ;

Second Plan : Particular emphasis to prepare the Railways for carrying the traffic generated by the new steel plants and the increased production of coal ;

Third Plan : Building up additional capacity so as to be ahead of the traffic demand and to prevent bottlenecks ;

Fourth Plan : Modernisation of the system to improve efficiency of operations ;

Fifth Plan : Improvement of the existing capacity more than the extension of the railway system and maximisation of operational efficiency of the Railways.

Sixth Plan : The main objective are : (*a*) to augment the capacity for handling the expected increase in freight and passenger traffic ; (*b*) to modernise the system in respect of its equipment and practices ; (*c*) to promote better utilisation of the existing assets and to move further in the direction of self-sufficiency in equipment by undertaking increased local production of critical items ; (*d*) to stimulate research and development in the fields of modernisation or improvement of Railway technology.

The Sixth Plan anticipated that during 1980-85' freight traffic will be in the range of 300-313 million tonnes, an increase at the rate of 7 per cent per annum of suburban traffic and 3 per cent per annum of non-suburban passenger traffic. To meet this projected growth rate, the Sixth Plan has provided for an outlay of Rs. 5100 crores for the programmes of the Railways. Over 50 per cent of the allocation will be used for the development of rolling stock.

According to the Sixth Plan figures, the Railways were to add 2800 km of electric track in the five-year period for which Rs. 2100 crores had been allocated. 780 locos—300 electric and 480 steam—were to be added to the Railway fleet during the period. In the first two years, 120 electric locos have been manufactured at Chittaranjan. However, in March 1982 i.e. at the start of the third year of the plan, it was felt that it would not be possible to achieve the targets. The target for electrification of track was thus lowered to 2,220 km. With this, the ministry has decided to add only 250 electric locos. This would mean manufacturing 40 electric locos annually in the remaining 3 years of the plan and instead of adding to capacity gradually to reach 100 locos as planned earlier, capacity utilisation will be brought down by 20 per cent.

Railways under the Seventh Plan

The Indian Railways have envisaged 6 per cent annual growth in revenue earning originating goods traffic during the Seventh Plan period. It has been planned to achieve 350 million tonnes of revenue originating traffic during the Seventh Plan as against the estimated traffic of 275 million tonnes during the Sixth Plan period. To achieve this target 1,25,000 additional wagons during the Plan period or 25,000 a year will be required. The increase in overall passenger traffic during the Seventh Plan is expected to be five per cent.

However, operation of railways has been beset with many problems. The major problems pertain to finances, tardy implementation of projects, revision of time-targets and the resultant cost escalation in the intermittant period. According to approved projects, new lines totalling 2255 km are to be completed over the next seven years. However, considering the fact that the annual average of new lines opened during the last 2 plan periods has been only 150 km, the completion of the above projects seem unlikely. Despite the slow progress of lines under construction and the constrained financial situation, 56 surveys for new lines were under progress in 1981-82. As against these, construction of new lines was proposed to be taken up only in 21 cases according to the Sixth Plan.

Track Renewals

While formulating the Sixth Plan, it was estimated that 7800 km of primary renewals and 5300 km of secondary renewals were in arrears at the end of 1979-80. A provision of Rs. 500 crores was made in the Sixth Plan for track renewals and this was expected to cater only to 6000 km of primary and 2000 km of secondary renewals. Speed restrictions are in force on over 4000 km of track because of their worn-out condition. Also, interruptions in normal working on account of failure of permanent ways have increased. The result is imposition of speed restrictions even on trunk routes and main lines of 25.50 km per hour and on weak bridges.

Frequent and large scale failure of traction motors and inadequate repair facilities have in the past resulted in immobilisation of a number of locomotives. Besides this, the capacity available for periodic overhaul (POH) of electric locomotives was for only 600 locomotives whereas requirements were for nearly double that number ; expansion of POH capacity is also rather slow. Workshop capacity for coaches and wagons is also found to be inadequate.

Thus maintenance problems have saddled the railways with worn-out tracks, out-dated wagons and coaches, faulty signals, etc. The number of overaged wagons stand at over 25,000 on broad gauge and 6800 on the metre guage. The number of coaches overdue for replacement stood at 2020. Locomotives and plant and machinery in workshops were also in bad shape. All these have affected the overall performance and the financial position of the railways, which in turn resulted in poorer maintenance and insufficient replacement. The principal reason for all these is the incapacity of the railways for nearly two decades to make adequate appropriations to the Depreciation Reserve Fund. The failure to control administrative and labour costs and the pressure to keep tariffs low have resulted in inadequate allocations to this fund and withdrawals from the fund have been much less than warranted.

Recently, however, there has been an awakening to this need and as per revised budget estimates for 1982-83 and the budget for 1983-84, provisions for DRI were Rs. 556 crores and Rs. 850 crores respectively. Even these larger monetary allocations were below requirements in physical terms.

Unfortunately, the Sixth Plan programmes of wagon and coach procurement, track renewals and electrification had to be curtailed substantially. The target for wagon procurement has been reduced from 100,000 wagons to 78,000. Actual procurement in the first 3 years of the plan aggregated only 43,514 wagons. Even if the estimated acquisition of 26,100 wagons materializes in the last two years, total would still be only 69,614 and well short of the target.

TABLE 7

Railway Wagon Procurement in the Sixth Plan

Year ending March		Target	Actual
1981	..	13,000	12,064
1982	..	18,000	17,362
1983	..	17,580	14,088
1984	..	12,500	12,100(E)
1985	..	21,986	14,000(P)
1981-85	..	1,00,000	69,614(P)

E—Estimate ; P—Provisional.

Source : The State of the Nation, 1984.

The renewal of sick tracks during the entire Sixth Plan period is now estimated at 10,400 km as against the targeted 14,000 km. By 1985, there will still be 18000 km of railway track needing immediate renewal.

It is felt that given the inherent inability of the railways to generate sufficient internal resources for modernization, the only alternative, as suggested by the Railway Reforms Commission, would be an ad hoc annual subsidy of Rs. 260 crores from the exchequer as long as renewals and replacements are due.

SHIPPING

The Indian merchant shipping fleet is the largest among the developing countries ; the country ranks fifteenth in the world in terms of shipping tonnage. At the time of our independence the total operative tonnage in the country was 1.92 lakh GRT. By 1983, it had grown to nearly 62 lakh GRT. The Indian shipping had thus registered a 30-fold increase in these 35 years. This was through the combined efforts of the industry and the Government. Public Sector undertakings of the Central Government own about 54 per cent of the total GRT.

There are at present 66 shipping companies in the country of which 16 are engaged exclusively in coastal trade and 43 in overseas trade ; Seven companies including the two Government of India undertakings viz., Shipping Corporation of India and Mogul Line Ltd. carry on both coastal shipping and overseas trade.

The Shipping Corporation of India was formed through the merger of (i) the Eastern Shipping Corporation set up in 1952 to carry on trade with Australia and the Far East and (ii) the Western Shipping Corporation set up in 1956 to operate on Indo-Persian Gulf, Red Sea and Indo-Poland routes.

The Shipping Corporation of India is now one of the biggest shipping lines of the world, with a fleet of 146 vessels and 30.08 lakh GRT. The tonnage of this Corporation accounts for 51 per cent of the total Indian tonnage. The Mogul Line Ltd. mainly carries Haj pilgrims from Bombay to Jeddah and back. It also operates passenger vessels on the Konkan coast and liner service to Red Sea and the Gulf ports, besides carrying on coastal cargo and international transport services. It has a fleet of 19 vessels including three passenger vessels, 15 cargo vessels and a product tanker with a total of 2.36 lakh GRT.

The major private sector shipping companies which own one lakh or more GRT are the Scindia Steam Navigation Co. Ltd. (5.61 lakh GRT), Great Eastern Shipping Co. Ltd. (4.04 lakh GRT), India Steamship Co. Ltd. (2.02 lakh GRT), South India Shipping Corporation Ltd. (1.51 lakh GRT), Damodar Bulk Carriers Ltd. (1.61 lakh GRT), Chowgule Steamships Ltd. (1.60 lakh GRT) and Dempo Steamships Ltd. (1.48 lakh GRT).

Coastal trade is carried on entirely by national vessels. With progressive normalisation of relations with Pakistan and China, trade with these countries has been resumed and Indian vessels are calling at their ports.

India has ratified the UN Convention on the code of conduct for Lines conferences, which it signed on 14th February 1978.

Growth

The real growth of Indian shipping may be said to have started only since independence. In spite of a rather slow progress in the initial years, Indian Shipping tonnage has grown significantly in the last 2 decades. From around 4 lakh GRT at the beginning of the First Plan period, India's shipping tonnage increased to nearly 24 lakh GRT by 1971 and further to nearly 59 lakh GRT by 1982 and 61 lakh GRT by the end of December 1983.

Source : Statistical Outline of India, 1984.

During the Seventies, the Indian fleet increased by about 137 per cent in terms of GRT and 155 per cent in terms of DWT, mostly on account of rapid expansion of tanker and bulk carriers. The highest growth rate is seen to be during the years immediately following the oil crisis of 1973-74. This was, however, due mostly to the delivery of orders placed during the previous unprecedented boom period. Subsequently, as an aftermath of the world-wide recession of 1975-79, the Indian Shipping suffered a dilution of the expansion process. As a result of the rapid expansion of the previous period, especially in the case of companies which had acquired large size bulk carriers and tankers the Indian shipping companies were faced with a serious liquidity crisis with their inability to employ gainfully their new heavy acquisitions under the inordinately depressed tramp freight market conditions. The growth rate consequently suffered and the national tonnage almost stagnated since 1979.

The Indian fleet has undergone considerable diversification over the years. It now includes liners, passenger-cum-cargo vessels, tankers, bulk carriers, combined carriers, tramp vessels and VLCCs operating in both coastal and overseas trades, for carriage of general cargoes, dry bulk cargoes as well as crude oil and oil products. A programme of fleet expansion and modernisation has been launched to increase the tonnage to 7.5 million GRT during the Sixth Plan period and to 10 million GRT during the eighties. Plans are also being implemented to strengthen the port and other inland infrastructural facilities.

Coastal shipping was reserved for Indian ships soon after independence. Indian vessels have performed satisfactorily as far as carriage of oil on coast is concerned. The development of coastal fleet has, however, stagnated in respect of carriage of dry cargo.

A comprehensive plan for the development of coastal shipping during the 1980s was drawn up by a Committee set up by the Government under the chairmanship of Mr. R. D. Pradhan. The target for the coastal-fleet was 717,000 DWT by 1984-85 and 12,00,000 DWT by 1989-90. The Committee proposed extension of the operation of the coastal ships to a wider area to include adjacent trades. A separate Directorate for coastal shipping was also recommended to provide a focal point and clearing house for coastal shipping matters. The Committee further suggested a Shipping Advisory Board to advise on matters of freight rates and underscored the need to simplify the customs and port procedures.

The Coastal tonnage of India as on 1.1.83 stood at 3.38 lakh GRT. The overseas fleet in operation as at the beginning of 1983 totalled 337 ships of 5.69 lakh GRT. It may be noted that the target for the Sixth Plan for the overseas fleet is 69.5 lakh GRT out of the overall shipping target (for coastal and overseas fleet) of 75 lakh GRT to be achieved by March 1985. A provision of Rs. 720 crores was made for shipping development during the Plan period.

TABLE 9

Indian Shipping Tonnage

Category		No. of vessels	GRT
		(As on 1.1.1983)	
A.	Coastal Trade	68	3,38,279
B.	Overseas Trade	337	56,91,899
	1. General Cargo ships	167	14,75,466
	2. Bulk Carriers	137	30,13,000
	3. Tankers	26	11,46,030
	4. Others	7	57,403
	Total	405	60,30,178

Source : INDIAN SHIPPING Vol. 35 of No. 2/1983.

The Table above provides a general profile of the Indian shipping industry. In terms of numbers, the general cargo ships constitute the largest segment contributing 41 per cent of the total, though in terms of tonnage these ships constitute only 24 per cent, being smaller in size. Tankers and bulk carriers form 19 per cent and 50 per cent respectively of the total tonnage.

In the liner sector, the market share of Indian flag lines in the country's overseas general cargo trade has been declining and was reduced to only 27.8 per cent in 1981-82, as revealed by the following Table.

TABLE 10

Market Share of Indian Shipping Lines in Overseas Trade (General Cargo)

Year	Percentage share of Indian Lines		
	Exports	Imports	Total
1975-76	29.0	42.0	33.3
1976-77	31.3	59.9	40.0
1977-78	32.5	52.2	37.8
1978-79	26.6	30.0	28.8
1980-81	28.1	38.7	33.9
1981-82	29.6	26.5	27.8

Source : Financial Express, July 11, 1983.

The market share would be lower still, but for the cargoes shared by the Indian shipping lines under bilateral agreements with Communist countries. Their share in India's general cargo trade with free trade areas was only 24% in 1981-82. In 1982-83, the market share had further decline.

It is generally believed that one of the main reasons for the sharp drop in market share was a sudden spurt in containerisation of general cargo. A shift in favour of foreign lines with regard to containerised cargo is due to the operation of certain factors to the greater advantage of foreign lines. These are, the rapid increase in container carrying capability in foreign shipping lines, lack of adequate container ships in the Indian fleet and the greater attraction that foreign liners now have towards Indian ports that are providing better container handling facilities. Also in recent years, there was a decline in international trade ; nevertheless, world fleet continued to expand resulting in massive over-supply of shipping tonnage and large scale dumping of shipping services by foreign lines into the Indian trades. Another factor detrimental to our national shipping industry's interest is India's geographical location next door to the Gulf. Shipping companies from all over the world bringing in massive imports to this region, finding lack of matching outflow of goods, fill their ships with Indian cargo. Thus the Indian lines are competed out in the resultant scramble for cargo.

Government Policy

As in the case of other industries, Indian shipping industry has also chartered a distinctively Indian course of development. This was enabled by a Government policy of supporting and promoting self-reliance, creation of appropriate infrastructural policies and encouragement of entrepreneurship both in the private and public sector, with the latter playing a leading role.

It is noteworthy that no shipping policy was proclaimed after 1945 when a sub-committee of the Reconstruction Policy Committee was constituted to recommend a shipping policy for India. These recommendations, however, were farsighted and made in the full knowledge that

Indian shipping was at the mercy of foreign lines and needed Government support. Even at that time the targets set were—100 per cent of India's coastal trade, 75 per cent of India's trade with Burma, Ceylon and geographically adjacent countries, 50 per cent of the country's distant trade and 30 per cent of the trade formerly carried in Axis vessels in the Orient. The Government of India declared its intention to assist Indian shipping as far as possible in that direction. The same policy is being followed ever since.

To provide trained crew to man Indian ships, training institutes were established. A Shipping Development Fund was constituted in 1958 to provide loans on soft terms for purchase of vessels. Till 1982-83, this Fund had disbursed loans worth Rs. 1125 crores. Within the Ministry of Shipping, a special fund TRANSCHART was set up in the year 1960 for making shipping arrangements for Government owned cargoes. As a matter of policy, as far as is feasible, preferential employment is given to Indian flag ships.

The National Shipping Board advises the Government on shipping matters. It is a statutory body set up under the Merchant Shipping Act, 1958. The Technical Review Committee in the Union Ministry of Shipping and Transport advises on the steps to be taken to ensure proper coordination of shipping arrangements for Government controlled cargoes and to utilise Indian tonnage to the maximum extent possible. The All India Shipping Council is concerned with negotiating on freight and shipping problems with shipping companies and conferences. The Indian National Shipowners Association promotes the interests of national shipping, ship-building and allied industries. The INSA was founded in 1930 with the following objectives : (1) To promote the development of national shipping commensurate with the national needs ; (2) to take active measures for all-round development of maritime industries in all their aspects ; (3) to coordinate its activities and cooperate with various national and international organisations on shipping and allied matters and (4) to disseminate information on shipping and allied industries in both domestic and international properties. The membership of the INSA covers over 97 per cent of the national tonnage.

The Directorate-General of Shipping operates under the Ministry of Shipping and Transport. It is an executive agency of the Government on all matters relating to coastal and overseas shipping. The Indian Coastal Conference regulates the coastal shipping operations and freight rates on a voluntary basis.

Six training establishments are being run for merchant navy officers and ratings. T. S. Rajendra at Bombay imparts pre-sea training to navigation cadets. The Lal Bahadur Shastri Navigational and Engineering College at Bombay, conducts post-sea instrumental courses in navigation and engineering. The Directorates of Marine Engineering. Training at Bombay and Calcutta, Bhadra at Calcutta, Mekhala at Vizag and Navlakshi are other important training centres.

Indian Register of Shipping (*IRS*) : India has its own Register of Shipping to survey, classify and register its ships. It has been functioning from 1975 onwards. India's national Classification Society was established in March 1975 with the main objectives of (*a*) providing accurate classification and record of mercantile shipping classed with the IRS ; (*b*) establishing and administering standards for the construction and periodic surveys of ships and other marine structures ; (*c*) approval of designs for, survey and report on installations, machinery, material and apparatus required ; and (*d*) aid and develop merchant marine of India. The IRS has 265 ships in its class aggregating 28.9 lakh GRT comprising 177 dual class and 88 single class vessels as on 31st March 1983. Further 74 vessels under single classification and 27 vessels under dual classification were being built in various shipyards as on that date. It has dual class agreements with various International Classification Societies to enable surveys to be carried out aboard its classed ships. It is engaged in inspection and certification of land-based plants, equipment and components as per specifications of purchases. It is also a Government-appointed assigning authority for Load Line.

Ports

Along its coastline of about 6000 km on the East and West, India has 10 major, 21 Intermediate and 139 minor working ports (out of a total of

226 minor ports). Major ports are the direct responsibility of the Central Government in the Ministry of Shipping and Transport. Nine of the major ports are administered by Port Trusts which are statutory bodies, while New Mangalore port is administered by the Central Government directly. Each port has a Board of Trustees representing various interests connected with port operations and the shipping industry. Intermediate and minor ports figure on the commercial list and are administered by the respective State Governments.

The major ports of India are Bombay, Kandla, Mormugao, New Mangalore and Cochin on the west coast and Tuticorin, Madras, Vishakapatnam Paradip and Calcutta on the east coast. A new major port at Nhava Sheva has been sanctioned in 1982.

The Bombay Port, with its natural harbour, handles the largest number of containers among Indian Ports. Bulk of its traffic consists of petroleum products and dry cargo. Its docks cover an area of 283 hectares. Besides the docks there are a number of ' bunders ' or open wharves with a total quayage of about 12.5 km. The new major port project of Nhava Sheva was sanctioned in 1982 at an estimated cost of Rs. 506 crores. It envisages 3 berths for handling container traffic. The project is expected to be commissioned by the end of 1987.

Calcutta is a riverine port handling diversified commodities. At Calcutta there are 2 impounded docks known as Kidderpore Dock and Netaji Subhash Dock. The third and subsidiary deep water modern dock at Haldia operates for handling bulk carriers and bigger vessels. The port can hold 75-90 vessels in impounded docks, riverside jetties and river moorings. A proposal for creating container handling facilities at an estimated cost of Rs. 9 crore is under consideration.

Cochin is a natural harbour and is open for deep water traffic in the worst monsoons and provides splendid anchorage at all times of the year. There are 11 stream berths, 2 coal berths, 8 wharf berths and a boat train pier jetty with facilities for handling container cargo. The port handles fertilizers, petroleum products and general cargo. A project for building latest container handling facilities at a cost of Rs. 5.1 crores has been sanctioned by the Government.

The Kandla Port has a cargo jetty with 1166 mm of quayage, two R.C.C. piers for handling liquid bulk cargo, connected to 3 oil pipelines and a fishing jetty. The port is equipped with VHP communication network for mainitaining contact with pilot and survey launches and ships calling at the port. It is a tidal port handling petroleum, fertilizers, food grains, cotton, cement and edible oils. A Free Trade Zone has been established at Kandla.

Madras is one of the largest ports on the east coast and handles the largest volume of traffic in general cargo next to Bombay and Calcutta. The Madras port has in all 20 berths and 3 moorings. The outer dock located on the northern side of the main harbour, known as the Bharati Dock comprises an oil berth and ore berth, both designed to cater to 100,000 DWT tankers. It handles mainly petroleum products, iron ore and dry cargo. A full-fledged container berth, built at a cost of Rs. 38 crore, was commissioned in December 1983.

The New Mangalore Port is situated 9 km north of the existing minor port of Mangalore and was developed at a cost of Rs. 44.42 crores. The port provides for 3 alongside berths and an oil jetty and is equipped to handle an annual traffic of 1.2 million tonnes. In order to develop the port to cater to the needs of receiving 60,000 DWT ore carriers for export of Kudremukh iron ore, the port is undergoing substantial development and extensive construction work is in progress. Iron ore apart, the port handles fertilizer, petroleum products, granite stones and dry cargo.

Mormugao is a major port providing modern facilities in handling oil, iron and manganese ores and general cargo traffic. Installation of a massive mechanical ore handling machine with a rated capacity of 8000 tph is under progress and a deep-drafted oil berth has already been commissioned. The port mainly handles export of iron ore.

Paradip, a deep water, all-weather major port is situated on the east coast in the Bay of Bengal.

The port has one iron ore berth, one general cargo berth and a mooring buoy berth and handles nearly 3 million tonnes of traffic a year, consisting mainly of oil, coal and dry cargo.

New Tuticorin, India's 10th major port, is situated 8 km South-East of the existing intermediate port of Tuticorin. The erstwhile minor port of Tuticorin was merged with the major port to form an integrated port. It has 4 alongside berths with a total quayage of 810 m, two of which have transit sheds and one oil mooring berth. A fumigatorium for fumigating 2000 bales of cotton is available. The port handles mainly salt, coal, oil and dry cargo.

The major port of Visakhapatnam is on the east coast. It is the deepest land-locked and protected port, where an outer harbour has been developed. The inner harbour consists of six east quay berths, two west quay berths and an oil wharf consisting of 2 berths, one mechanical fertilizer berth, three jetty berths and one mooring berth. It can accommodate 14 ships alongside and one in moorings. The outer harbour, with an iron ore berth-finger type jetty is capable of accommodating 2 ore-carriers, each of 100,000 DWT. The port handles iron ore, coal, oil and dry cargo.

Container traffic handled at the major ports increased from 2.05 lakh tonnes in 1981-82 to 2.15 lakh tonnes in 1982-83 and further to 2.3 lakh tonnes in 1983-84. In 1983-84 Bombay handled over 60 per cent of the container traffic accounting for 1.36 lakh tonnes. It was followed by Cochin with 32,500 tonnes while Madras with a quantum jump of 10,000 containers and handling 28,000 tonnes has overtaken Calcutta to claim the third position. The aggregate throughout handled by major ports rose to an all-time high of 100.45 million tonnes in 1983-84.

An Inland Container Depot (ICD) at Bangalore has been moving containers through the Madras port. In April 1983, 2 ICDS were commissioned at Guntur and Coimbatore. An ICD at Delhi (Pragati Maidan) started functioning since March 1984.

Ship Building

India has 4 major ship-building yards : Cochin Shipyard, Hindustan Shipyard at Visakhapatnam, Garden Reach Shipbuilders and Engineers at Calcutta and Mazagon Dock at Bombay. All these shipyards are in the public sector. Also there are 16 major repair dry docks ; 6 at Bombay, 6 at Calcutta and 2 each at Vizag and Cochin. The dry dock at Hindustan Shipyard, Visakhapatnam can accommodate bulk carriers upto 70,000 DWT and another dock at Vizag can take in vessels upto one lakh DWT. One dock at Bombay can take ships upto 20,000 DWT. All other dry docks can accommodate ships of only less than 10,000 DWT.

The Hindustan Shipyard has built 80 ships since 1947. Its present annual production capacity is about 3 ships of 21,500 DWT. A dry dock is in operation since 1971. Besides this, the West Basin project has also been partially commissioned for repair work. A development and modernization project was taken up in 1982 at an estimated cost of Rs. 55 crores. This is scheduled for completion by end 1984 and would augment the shipyard's capacity by another 6—7 ships of 21,500 DWT annually. The Cochin Shipyard set up with Japanese collaboration is designed to have a dock for building ships upto 85,000 DWT and a repair dock to accommodate ships upto 1 lakh DWT.

The Garden Reach Workshop builds tugs, barges, dredgers and coasters. It now has the capacity to build ocean going merchant ships of 15000-26000 DWT. The Mazagon Dock which primarily constructs ships for the Navy, is also capable of building cargo ships, passenger ships, cargo-cum-passenger ships and dredgers. Its subsidiary, the Goa Shipyard Ltd. builds launches and tugs and undertakes ship repairing.

Dredging Corporation of India

The Government of India set up the Dredging Corporation to undertake capital and maintenance dredging at the ports in addition to the ports arrangement as also development of ports and port management. The Corporation has a fleet of 8 dredgers and other ancillary craft. The

Corporation bagged in 1977 a contract for the management of a port in Saudi Arabia.

Navigational Aids

The Central Government looks after the general navigational aids, while the States, port trusts and other agencies are responsible for the local aids. Under the Indian Light House Act, 1927, the Government of India exercises general control over all aids through the Department of Lighthouses and Lightships. The Department maintains various navigational aids along the coastline besides launches and VHF wireless sets. There are among others, 147 lighthouses, 12 lightbuoys, 13 fog signals, 14 radio beacons, 12 decca navigator chain stations, 1 light vessel, 6 recons and 21 VHF/RT sets. The Sixth Plan made provisions of Rs. 12 crores for new schemes and spillovers in these respects.

Inland Water Transport

Of the two categories of water transport, marine and coastal transport has been dealt with in the preceding pages. The state of development of inland water transport is briefly sketched below.

India has about 5200 km of major rivers, which are navigable by mechanised craft, but only around 1700 km are actually used. Also there are 4300 km of canal waters, of which only 485 km are suited to mechanised transport and actual utilisation is only around 330 km.

Important among the navigable rivers are, the Ganga and Brahmaputra and their tributaries ; the Godavari, Krishna, Mahanadi, Narmada, Tapti and their canals ; the backwaters and the canals of Kerala ; the Buckingham canal in Andhra and Tamil Nadu ; the Cumbarjua canal connecting Mandovi and Zuari rivers in Goa ; and the network of tidal rivers in the Sundarbans and their interlacing offshoots.

Inland water transport is a state subject. The development schemes are mostly taken up by the states as centrally sponsored schemes. The National Waterways (Allahabad-Haldia stretch of Ganga-Bhagirati-Hooghly rivers) Act, 1982 provides that it shall be the responsibility of the Central Government to regulate and develop this waterway and to secure the efficient utilisation of this waterway for shipping and navigation.

The importance of inland water transport had been declining since the middle of last century because of the momentum gained by railway transport development as a powerful competitive force as also the diversion of river waters for irrigation. As of now, river transport is of considerable importance in the states of Assam, West Bengal and Bihar. River transport accounts for half the traffic between Assam and Calcutta. There is a significant volume of water transport in Kerala where rivers and backwaters are used for transporting goods and people. There is some amount of water transport in the states of Orissa, Andhra and Tamil Nadu.

Inland water transport suffered from planners' negligence initially—less than one crore was spent on it during the first two plans. An important milestone during the period was the setting up of the Ganga-Brahmaputra Board, a joint venture of the Central Government and the State Governments of U.P., Bihar, West Bengal and Assam. In 1959, the Inland Water Transport Committee submitted its report, outlining long-term proposals for the development of water transport. On the basis of these, programmes were drafted in the Third and Fourth Plans. Thd Fifth Plan provided an outlay of Rs. 25 crores in the central and state sectors for inland waterways development. The actual expenditure was however much less. The Sixth Plan (1980-85) has made a provision of Rs. 45 crores. Actual expenditure incurred during 1980-81 and 1981-82 was Rs. 3.64 crores and Rs. 5.16 crores respectively ; provision of Rs. 9 crores and Rs. 12 crores were made for 1982-83 and 1983-84.

The Central Inland Water Transport Board, New Delhi, formulates the policy for the development of inland water transport in the country. The Inland Water Transport Directorate of the Union Ministry of Shipping and Transport gives technical advice to the states. The Central Inland Water Transport Corporation (CIWTC) set up in 1967 at Calcutta, operates the river services carrying goods between Calcutta and

Assam via Bangladesh and also between India and Bangladesh. It also operates river services between Calcutta and Farakka and river-cum-road service between Calcutta and Cachar. Its other activities include ship-building, ship-repairing, stevedoring, clearing and dredging.

Andaman and Lakshadweep Harbour Works

The Central sector also takes up programmes concerning Andaman and Lakshadweep group of islands. A provision of Rs. 20 crores was mad in the Sixth Plan for these purposes. The programmes taken up include Andaman Harbou Works, Lakshadweep Harbour Works and allocations for Minor Ports Survey Organisatio covering both on-going and new schemes. Th major on-going schemes include dry dock a Port Blair, breakwater and warf at Mus in Ca Nicobar, procurement of dredger and hoppe barges for Lakshadweep islands and surve launches for the minor ports Survey Organisation

CIVIL AVIATION

Civil aviation has a key role to play on routes involving difficult terrain and on long distance routes. Aviation is the fastest means of transport and offers substantial saving in transit time on long hauls.

History

The Government of India constructed a few aerodromes in 1920 and marked the beginning of civil aviation in India. The Department of Civil Aviation was set up in 1927 and a number of flying clubs were founded. However, real progress started only during the Second World War, when more aeroplanes were purchased, new services started and frequencies increased. In 1946, the Government of India laid down its aviation policy as being the encouragement and development of internal and external transport services through a limited number of sound and reliable private commercial concerns with necessary Government help. In 1946, the Government set up the Air Transport Licensing Board which gave 11 licences. Initially, there was overcrowding and clustering around a few centres and the concerned companies suffered heavy losses.

In 1950, the Air Transport Enquiry Committee known as the Rajadhyaksha Committee, wa appointed. The Committee recommended integration of all companies to eliminate cut-throa competition and secure an efficient zonal distribution of work. Since the companies did no voluntarily integrate, the Government had t nationalise civil aviation in the country. Th grounds cited were that (*a*) nationalisation woul improve operational efficiency; (*b*) it woul result in better organisation of civil aviation an would enable recruitment of qualified personne and (*c*) it would reduce duplication of services wastage of flying hours and minimise costs an losses.

In 1953, the Parliament passed the Air Transport Corporation Act under which the India Airlines Corporation was entrusted with th responsibility of operating internal services an Air India International was to run externa services. Since nationalisation many new airport were constructed and internal as well as externa services were extended.

Air Transport in India has experienced a ver rapid rate of growth in the last 2 decades. The following Table presents a picture of the growth in aviation in the last two decades.

TABLE 11

Aviation in India

	1961	1971	1981	1982 (p)
Domestic				
Kilometres flown (Mn) ..	27.8	33.4	44.4	44.9
Hours flown ('000s) ..	104	90	98	95
Passengers carried ('000s) ..	745	2,056	5,560	6,152

Figures given are for scheduled services only.

Source : Statistical Outline of India—1984.

At the beginning of 1983, there were 685 aircraft with current certificate of registration and 238 with current certificate of airworthiness. At present, Indian aircraft are flying around 90 million kilometres in a year, carrying 8 million passengers and over 160 thousand tonnes of cargo and mail.

The scheduled air services to maintain domestic and international air transport are operated by 2 public sector corporations viz. Indian Airlines and Air India, both of which were founded in 1953. The fleet of the Air India by the year 1982 constituted of 10 Boeing 747 and 6 Boeing 707 and that of Indian Airlines was 10 Airbus, 25 Boeing 737, 12 HS-748 and 8 Fokker Friendship F. 27. Indian Airlines have placed a letter of intent with the Boeing Company for acquisition of 12 Boeing 757s. These are likely to be delivered in the period 1985-88 with the first five aircraft scheduled to be delivered in 1985. Air India has placed a letter of intent with the Air Bus Industry for getting airbus A 310-300 aircraft to meet requirements arising out of the phasing-out of Boeing 707 and for capacity augmentation as well. These are likely to be delivered by 1986.

Air India started with one weekly service to London. It now operates extensive scheduled passenger and cargo services from Bombay and five other Indian cities—Calcutta, Delhi, Madras, Trivandrum and Amritsar to Addis Ababa. Nairobi, Accra, Lagos, Seychelles, Mauritius, Dar es Salaam, Lusaka, Salisbury, New York, Montreal, London, Birmingham, Paris, Amsterdam, Frankfurt, Geneva, Rome, Zurich, Brussels, Moscow, Doha, Abu Dhabi, Dhahran, Dubai, Bahrain, Kuwait, Aden, Muscat, Jeddah, Ras-al-Khayma, Sharjah, Dacca, Bangkok, Hong Kong, Tokyo, Osaka, Kuala Lumpur, Singapore, Perth and Sydney. In 1971, Air India set up a wholly owned subsidiary company called Air India Charters Ltd. which is a non IATA charter company with a capital of Rs. 50 lakhs.

Indian Airlines' services extend over the entire Indian sub-continent including Nepal, Sri Lanka, Pakistan, Afghanistan, Male and Bangladesh. With operations at seventy stations, an Indian Airlines plane either takes off or lands in any of these airports every 2.5 minutes. The operations of the regions have been divided into 4 regions : Eastern region with headquarters at Calcutta ; Western region headquarters at Bombay ; Northern region with headquarters at Delhi and Southern region with headquarters at Madras.

Indian Airlines enjoy a virtual monopoly on domestic routes. It also has the benefit of low wage costs by international standards. These advantages are, however, offset by low fares, high fuel costs and uneconomic routes. It has to operate under Government control and is forced to operate uneconomic aircrafts such as Avro and Fokker. Some of the smaller airports cannot receive larger crafts. Avro reaches breakeven only at 95 per cent capacity, while Fokkers are beyond the pale at 127 per cent, thus involving monetary losses on routes where they are operated.

By 1984, Indian Airlines has emerged as the fifth largest domestic carrier in the world among the International Air Transport Association (IATA) members airlines outside the US, on the basis of scheduled revenue passenger kilometres flown. It is the tenth largest domestic air carrier in the world, when the member airlines of the US are also taken into consideration. The airline had flown over 5990 million revenue passenger kilometres in 1983-84. Indian Airlines' domestic network is also the second largest among IATA carriers outside the US, next to Air Canada. Indian Airlines carried 7.67 million passengers in 1983-84 and is expected to carry 8.42 million passengers in 1984-85.

Under the supporting facilities, the major programme taken up by Indian Airlines relates to the construction of a jet engine overhaul facility, with the commissioning of which support facilities are likely to improve considerably, leading to better utilisation of the fleet. Air India and Indian Airlines have acquired realtime computer system which, when fully commissioned, would provide instant reservation facilities to passengers.

According to Sixth Plan projections, the capacity of Indian Airlines in terms of Available Seat Kilometres is to increase to 8750 million ASKM by 1985 from 5771 million ASKM in 1980. The capacity of Air India at the end of the Plan period is expected to go upto 1900 million Available Tonne Kilometres from 1372 ATKM at the beginning of the Plan.

Vayudoot

To provide connecting links to important outlying stations with those on the airlines' map, a third level feeder air service was set up under the name Vayudoot. Vayudoot was launched on January 26, 1981 with an authrosied capital of Rs. 25 crores owned jointly by Air India and Indian Airlines. Initially, it provided airlinks to inaccessible areas in the North Eastern region. Vayudoot operates through civil and defence aerodromes, one state government aerodrome and two licensed private aerodromes. It operates services from Guwahati, Dibrugarh and Agartala to Barapani, Kailashahi, Rupsi, Kamalpur and Tezy by F-27 aircraft. It also operates daily services between Bombay and Kandla via Surat and Bhavnagar.

The Sixth Plan has allocated Rs. 17 crores for the third level Air Services—Rs. 10.5 crores for providing infrastructural facilities and Rs. 6.5 crores for purchase of aircraft. For further expansion of Vayudoot services, 10 Dornier aircraft are proposed to be acquired in the next 3 years ; with the induction of these aircraft into its fleet, Vayudoot would be in a position to expand its operation to the Southern region.

In the next stage of its development Vayudoot will provide link services with the following stations : Cuddapah, Rajahmundry, Warangal in

Andhra Pradesh, Jamshedpur, Gaya, Muzaffarpur, Purnea in Bihar, Hissar in Haryana, Raichur Hubli in Karnataka ; Calicut in Kerala ; Bilaspur, Jagdalpur in Madhya Pradesh, Nanded in Maharashtra ; Rourkela in Orissa ; Ludhiana in Punjab ; Kota, Bikaner, Jaisalmer in Rajasthan, Thanjavur in Tamil Nadu, Dehra Dun, Ghazipur ; Pantnagar and Rae Bareli in Uttar Pradesh.

International Airport Authority of India (IAAI)

The IAAI was constituted as a statutory corporation, with effect from February 1, 1972 for the management and development of the four international airports at Bombay, Delhi, Calcutta and Madras which together handle 40% of the domestic flights and most of the international air services. The authority also develops and provides consultancy services in relation to planning and development of airports in India and abroad. It has on hand several foreign projects. The IAAI development programmes include construction and improvement of runways, taxitracks and aprons and supply of electrical and other equipment.

The Sixth Plan proposed on outlay of Rs. 141 crores for programmes of IAAI. These funds were to be apportioned for the completion of terminal complex projects in Delhi and Bombay, domestic terminal complex at Madras, modification of existing terminal buildings so as to meet the growing requirements of the increasing traffic, and for operational work and electrical equipment for improving the lighting of runways. A new international terminal complex was completed in Bombay in 1980 and became fully operative with the installation of aerobridges in February 1981.

The four international airports are now equipped to handle 3 times the volume of traffic as handled in 1972-73. The IAAI airports handled 5.6 million passengers and 81,000 tonnes of cargo in 1972-83 while in 1983-84, 14.7 million passengers and 282,904 tonnes of cargo were handled.

The table below gives the broad break-up of outlay for the period 1980-85 under the Sixth Plan for the Civil Aviation sector in India.

TABLE 12

Outlay for Civil Aviation 1980-85

Sub-sector		Outlay (Rs. crores)
Air India	..	277
Indian Airlines	..	272
International Airport Authority of India	..	141
Civil Aviation Dept.	..	143
Third Level Air services	..	17
Total	..	850

Note : This provision is in the Central sector and is exclusive of Rs. 9.10 crores provided in the State Sector, mainly for improvement of airships, helipads, flying clubs, training facilities etc.

Source : Sixth Five Year Plan 1980-85.

The Directorate General of Civil Aviation is responsible for operation of civil airports, excluding 4 international airports, provision of air navigation services, air traffic services, rescue and fire fighting, security of civil aviation for the regularity and safety of aircraft operations, registration of aircrafts certification of operators, craft licensing of air crews and airports, air services agreement with foreign governments and air transport matters. The Research and Development Directorates of Civil Aviation Department holds charge for type certifications of civil aircraft and aeronautical equipment, development testing of aircraft material and components, laboratory investigation of in-service failure, prototype development of light aircrafts, gliders, sail planes and glider launching winches and so on.

There were 87 aerodromes and 20 civil enclaves maintained by Civil Aviation Department as on 31st December 1982. In addition, there are many aerodromes controlled/owned/maintained by Ministry of Defence, State Governments, Public undertakings, Private individuals and bodies. Ninety aeronautical communication stations provide 256 channels in aeronautical mobile service, 275 channels in aeronautical fixed service, 216 navigational facilities and 9 channels for ground to air voice broadcast.

The Civil Aviation Training Centre, Allahabad comprising of an aerodrome school and a communication school trains air traffic controllers (procedural and radar), operation and maintenance personnel. Ground training is also imparted to pilot trainees. Fire Service Training Centre, Calcutta trains rescue and fire fighting personnel.

The number of aircrew licences current on 31st October 1982 was 5140 of which 2166 aircraft maintenance engineers, 280 aircraft radio maintenance engineers, 47 glider maintenance engineers and 302 flight engineers were holding current licences.

Flying and Gliding Clubs

There are 29 flying clubs managed privately at Hyderabad, Guwahati, Bombay, New Delhi, Vadodara, Trivandrum, Lucknow, Indore, Nagpur, Madras, Jullundar, Coimbatore, Patiala, Amritsar, Banasthali Vidhyapeeth, Hissar, Jamshedpur, Karnal, Raipur and Ludhiana. Five State Government flying schools/training institutes operate in Bangalore, Bhubaneswar, Calcutta, Jaipur and Patna.

There are nine gliding clubs at Ahmedabad, New Delhi, Pilani, Raipur, Nasik, Kanpur, Agra, Pinjore and Hyderabad. Besides there are 7 gliding wings of flying clubs. The Civil Aviation Department runs the government gliding centre at Pune.

ABC INDIA LTD.

ESTABLISHED in 1972. **Directors :** Anand Kumar Agarwal (*Managing Director*), Dharam Pal Agarwal, Madan Gopal Todi, Roshanlal Goel and V. L. N. Madhusudhan. **Registered Office :** Fancy Bazar, Gauhati-781 001, (Assam). Telephones : 25965/28211. Telegrams : 'ROAD-CARRY'. Telex : 0235-239. **Auditors :** Messrs. V. M. Purohit & Company.

Objects and Activities : The company deals with road transport.

CAPITAL : Authorised : Rs. 50,00,000 in 5,00,000 Equity shares of Rs. 10 each. **Issued, Subscribed and Paid-up :** Rs. 10,00,700 in 1,00,070 Equity shares of Rs. 10 each.

Date of Accounts : 30th September.

AHMADPUR-KATWA RAILWAY CO. LTD.

Directors : L. M. Chatterjee (*Chairman*) R. Bajoria, S. C. Mehta, M. K. Mukherjee and K. V. Balakrishnan (*Govt. Director*). *Chief Officer :* S. R. Sen Gupta. **Registered Office :** 3, Netaji Subhas Road, Calcutta-700 001. **Auditors :** Messrs. Lovelock & Lewes.

Objects and Activities : The company was formed to construct a railway line from Ahmadpur to Katwa, Bengal.

CAPITAL : Authorised : Rs. 17,25,000 in 17,250 ordinary shares of Rs. 100 each. **Issued and Subscribed :** Rs. 17,24,000 in 17,240 ordinary shares of Rs. 100 each fully called up.

Date of Accounts : 31st March.

AIR-INDIA

ESTABLISHED on 15th June 1953, at BOMBAY. **Directors :** Raghu Raj (*Chairman*), J. R. D. Tata, Air Chief Marshall Dilbagh Singh, M. M. Kohli, Natwar Singh, R. P. Billimoria Capt. K. Chadha, Capt. A. M. Kapur, G. N. Mehra, C. L. Sharma and Capt. D. Bose, K. J. M. Shetty, Dr. N. K. Sengupta. **Secretary :** S. Narayanaswamy. **Registered Office :** 218, Backbay Reclamation, Nariman Point, Bombay-400 021. Telegrams : 'AIR-INDIA'. Telephones : 292728.

Objects and Activities : Air India is a statutory corporation established under the Air Corporations Act, 1953. It look over the undertaking of Air India International Ltd. and began operations on its own from August 1953. It operates international air services on various routes to U.K., U.S.A., Canada, West Asia, Africa and Mauritius, Europe, U.S.S.R., Japan, Singapore, Bangladesh and Australia.

Air India has a fleet of 18 aircraft comprising of five B 707-337 B and C,ten B 747-237 B and three A300 B4. The last B 707-437 was phased out of operations in May 1983 and the remaining B707-337B and C aircraft will also be phased out progressively. For the year ended 31st March 1984 the corporation operated with a total capacity of 2010 million Atkm with an overall load factor of 61.5%; A total of 1,842,239 passengers travelled by Air India during the year accounting for 8683.8 million revenue passenger kilometres with a passenger load factor of 65.4%. The corporation also carried 410.99 million cargo tonne kilometres and 19.53 million mail tonne kilometres. Aircrafts of the corporation flew a total of 67,579 revenue hours with a capacity of 13194.1 million available seat kilometres on scheduled services.

The Corporation also arranges charter flights for tourists. Arrangements have been concluded with a Geneva-based company to operate round trip charters between Munich/Zurich/Delhi. Stopover tours to India have also been arranged in collaboration with Ashok Travel and Tours, a subsidiary of ITDC. Air-India has commercial pooling arrangement with Air Mauritius, Gulf Air, Zambia Airways, Singapore Airlines, Swiss Air, Malaysian Airlines, Kuwait Airways and Saudia also with Aeroflat, British Airways, Ethiopian Airlines, CSA, Japan Airlines, Air France, Air Seychelles, SAS, Sabena, Air Zimbabwe etc.

CAPITAL : Rs. 74,36,31,737 held etirely by the Government of India.

Date of Accounts : 31st March.

Hotel Corporation of India Ltd. and Air Ind Charters Ltd. are subsidiaries of the corporatio Air-India also has a shareholding of Rs. 3.2 crores in Vayudoot Ltd.

VEGETABLE OILS

THE terms 'Vegetable oils' and 'Edible oils' are synonymous in the Indian context because in this country fats of animal origin such as fish oil and lard are not used as cooking media ; nevertheless, it is important to keep this distinction in mind ; not all vegetable oils are edible—some including castor oil are mostly non-edible and some of the edible oils such as groundnut and coconut oil are finding increasing industrial applications as in cosmetics, soap making etc.

Edible oils are a major source of nutrition. The fatty acids in edible oils are required by the body as a vehicle for carrying vitamins, and they provide energy which is twice that of the cereals. Oil cakes, which are by-products of the oil extraction process, are important sources of animal nutrition. Besides, these can be processed into edible flours which are rich in proteins.

Oilseeds occupy a prominent position among the farming commodities in India, perhaps next only to the food crops. India occupies a premier position among the oilseeds producing countries of the world, accounting for about 10 per cent of the total output of vegetable oils and fats. It is the largest producer of groundnut, rapeseed, mustard and sesamum ; second in respect of castor seed production ; third in coconut production, fourth in cottonseed and fifth in linseed.

India has a highly developed oil based industry, employing more than 15 million persons. However, it is essentially a food-oil industry, which accounts for as much as 83 per cent of the total supply of vegetable oil in the country. Among the non-food users, the bulk is consumed by the soap, paint and varnish industries.

Oilseeds production

Oilseeds are cultivated on an area of about 19 million hectares (1982-83) in India constituting around 12 per cent of the country's cultivated area. This is contributed by nine oilseed crops namely groundnut, mustard, rapeseed, sesamum, safflower, niger, soyabean, sunflower, linseed and castor. The average annual production of oilseed crops, based on five yearly average, has increased from 51 lakh tonnes (1949-50 to 1963-64) to 99.89 lakh tonnes (1977-78 to 1981-82). Since 1980, the domestic oilseeds output has gone up considerably, from 93.7 lakh tonnes in 1980-81 to 105.5 lakh tonnes in 1982-83 and 128.1 lakh tonnes in 1983-84. The following table indicates the trend in the production of oilseeds (All-India) between 1978 and 1983.

TABLE 1

Production of Oil Seeds in India (1978-79 to 1982-83)

It is a fact that a major part of the increase in output of oilseeds has been obtained through an increase in total area under oilseeds cultivation, rather than by accomplishing much-needed improvement in the yield per hectare. The per hectare yield of oilseeds has shown only a marginal rise of little over 0.5 per cent during the past three decades. Viewed in the global context, India has the dubious distinction of having the highest average under oilseeds and showing the lowest yield per hectare. The following tables indicate the yield of selected oilseed crops in India and also a comparative statement of the average yield of selected major oilseeds for the World and for India.

TABLE 2

The low production of oilseeds in India has been attributed to a variety of factors. Over 80 per cent of the area under oilseeds cultivation in India does not have assured irrigation facilities. As the pressure on cultivable land is already heavy with cereal crops, the oilseeds have to be grown mostly on drylands where the fate of the crop is linked with the caprices of monsoon rains, and as a result the production of oilseeds fluctuates from year to year. Most of the oilseed crops are also cultivated in marginal and sub-marginal lands. Moreover, while oilseeds are energy-rich crops needing high-energy inputs, generally, only low inputs in terms of fertilisers, water, pesticides etc. are applied to them. To this must be added deficiencies in respect of seed storage and management, marketing support, adoption of improved crop practices etc. Despite the release of hundreds of new varieties of oilseeds each year, with claims of high productivity, there has been a total stagnation in the per hectare yield of oilseeds. Considering that there are limits to the rise in the area under oilseeds, it is obvious that per hectare yield of oilseeds will have to be increased appreciably.

Consumption Level

The per capita consumption of edible oils in India is 4.3 kg as against the world average of 11 kg. In the advanced countries the per capita consumption of edible oil ranges from 25 Kg to 32 Kg per annum. In order to meet the basic requirement, the production of oils and fats should be around 5.5 million tonnes a year ; as against this the present output is only 3.2 million tonnes, thus leaving a deficit of 2.3 million tonnes. The production of oilseeds in the country has failed to grow at the same rate as population since 1965 ; the growth in oilseed production has been only around 1.6 per cent a year in the last 15 years whereas their demand has continued to grow at the rate of 4 per cent. This has resulted in the country importing nearly one-third of its current needs of edible oils, which is over ten lakh tonnes a year. The country has become a major importer of edible oils, whereas it was a net exporter of these oils hardly twenty years back.

TABLE 4

Demand and Supply of Edible Oils : 1958-59 to 1982-83 (in 000 tonnes)

Year	Production (1)	Demand (2)	Gap (2)—(1)

Edible Oil Imports

Upto 1978 liberal import of edible oils and oilseeds were allowed to both private and public sector importers. But since 1979, the policy has been modified to channel all such imports through the State Trading Corporation, for the benefit of producers and consumers. So for Soyabean oil, neutralised Palm oil, Palmolein and rapeseed oil were being imported. During April 1984, a consignment of 9,000 tonnes of coconut oil was also imported as a result of the poor production of coconuts in Kerala.

To meet the ever increasing demand for edible oils, the country has been resorting to imports on a large scale. Import of edible oils which was a mere 1.7 lakh tonnes valued at Rs. 101 crores in 1976-77, increased to 16.4 lakh tonnes valued at Rs. 683 crores in 1980-81. In 1983-84, around 13.4 lakh tonnes of edible oil was imported at a staggering cost of Rs. 1080 crores. According to an estimate, by 1987, 18 lakh tonnes of edible oils will have to be imported and by the end of the Century the import requirement will be as high as 33 lakh tonnes.

The present internal availability position does not allow any reduction in the import of edible oils ; it is, therefore, crucial for the Government to formulate. strategies which should help to achieve the objective of self sufficiency in edible oils in the near future. A concerted effort on all fronts, such as increasing the output of oilseeds through better irrigation and pest-control measures higher support price for the farmers and improving oil extraction efficiencies and the marketing system, can help achieve the targets. If the government and the vegetable oil industry act in concert in these crucial areas, the need for imports will be obviated.

Oilseeds in the Sixth Plan

The Sixth Five-Year plan (1980-85), has given a high priority to oilseeds development. A target of 130 lakh tonnes has been set for oilseeds production, which involves an additional plan for 29 lakh tonnes of oilseeds. This amounts to a growth rate of about 5 per cent per annum. The Government has formulated a National Oilseeds Development project to be implemented during 1984-85, with an outlay of Rs. 38 crores. This will raise the total Sixth Plan investment in oilseeds development to over Rs. 100 crores, compared to Rs. 14 crores during the Fifth Five-Year plan. The National Oilseeds Development project is to be implemented in two phases. The special projects scheme will undertake a concentrated area approach for cultivation of four oilseed crops—groundnut, rape-seed-mustard, soyabean and sunflower—in 12 States, In the first phase, while intensive oilseeds development programming three more oilseed crops—sesamum, safflower and niger—is to be taken up during the second phase. The Government has also constituted a National Oilseeds and Vegetable Oils Development Board for the integrated development of oilseeds and vegetable oil industries. The board is to act as a national level policy-making body and as a unified agency for directing the growth, processing and promotion of the oilseeds and vegetable oil industries.

The following table indicates the targets of oilseeds production for the Sixth-Five-Year plan alongwith the base levels :

TABLE 6

Targets of oilseeds production—Sixth Five-Year Plan (1980-85)

(in lakh tonnes)

Crop		Assumed base level 1979-80 (Trend Estimates)*	Plan target 1984-85
Groundnut	..	61.2	73.0
Castorseed	..	2.4	3.0
Rapeseed and mustard		19.1	24.0
Sesamum	..	4.9	5.5
Linseed	..	5.6	5.5
Nigerseed	..	1.0	2.0
Safflower	..	2.3	3.5
Soyabean	..	4.0	10.0

* The base level figures for 1979-80 have been out on the basis of trend line compound growth rate of production for the period 1967-68 to 1978-79.

To increase the availability of vegetable oils, the following programmes are envisaged ; accelerating research ; strengthening of extension and training services ; increasing production of annual oilseeds like groundnut and mustard ; development of perennial oilseeds such as coconut and oil palm, exploitation of oilseeds of tree origin like sal, neem, mahuna, mango etc. increasing oil availability through technological processes such as extraction from cottonseed, rice bran etc., and provision of appropriate price support policy.

Groundnut

Groundnut is the primary oilseed crop in India, accounting for 70 per cent of the total oilseed production and more than 40 per cent of the acreage under oilseeds. India accounted in the past for more than half of the world's output, but has since fallen from its prime position. However, groundnut extractions form a lion's share of the total exports of oilseed meals from India, and contribute more than 50 per cent of the total world exports. Regrettably, the average yield per hectare of this important cash crop has been subject to vagaries. From 579 kg in 1970-71, it rose phenomenally to 935 kg in 1975-76, but declined to 552 kg in 1982-83. It has been demonstrated by the Vanaspati Manufacturer's Association that with improved selection of seeds, better water management, soil analysis and plant protection, the per hectare yield of groundnut can be improved by 40 per cent. A scheme of large scale multiplication of improved varieties of groundnut developed by BARC and various agricultural universities has been taken up. Under the National oilseeds Development Project for 1984-85, groundnut cultivation is to be taken up in Gujarat, Andhra Pradesh, Tamil Nadu, Maharashtra and Orissa, envisaging an area coverage of 30 lakh hectares under kharif crop and 14 lakh hectares under rabi crop. This is expected to increase the overall production of groundnut to 7.30 million tonnes during 1984-85.

To improve the method of groundnut cultivation, various research centres have been set up in the country. These research centres are at Ludhiana in Punjab, Tindivanam in Tamil Nadu, and Rajendranagar in Andhra Pradesh. The sub-centres are at Manipuri in U.P., Pollachi in Tamil Nadu, Kadria and Samtalpur in M.P. and Raichur and Dharwar in Karnataka. The Agricultural division of the BARC has developed high yielding varieties of groundnuts possessing improved oil contents.

Rapeseed and Mustard

Next to groundnut, rapeseed/mustard is an important oilseed crop contributing about one-fifth of the total oilseed production and area in the country. It is mainly grown in Punjab, Haryana, Rajasthan, Uttar Pradesh, Bihar, West Bengal and Assam. Of these, Uttar Pradesh accounts for 60 per cent of the all India acreage under this crop. The main centres for conducting research on rapeseed and mustard oilseed are at Berhampore (West Bengal) Kanpur (U.P.) and Hissar (Haryana). The sub-centres are at Purnea (Bihar), Pantnagar (U.P.) and Gurgaon (Haryana).

Sesamum

Sesamum is raised as a kharif crop in U.P., Rajasthan, Maharashtra and Punjab and as a rabi in crop Tamil Nadu, Orissa and M. P. There are various varieties of sesamum in varying hues—light brown, black, ash, greenish brown, dark brown, light brown and dull white, the most commonly cultivated colours being black and dull white.

India ranks first in the world both in area and production of sesamum crop, having 36 per cent of the area and accounting for as much as 22 per cent of the total world production. In 1982-83, 27.80 lakh hectares were under this crop in the country and the total production was around 5 lakh tonnes. The other major sesamum reproducing countries are China, Sudan, Burma, Mexico and Nigeria.

Cottonseed

Until the beginning of the sixties, cottonseed was used almost entirely as a cattle-feed, but now around 65 to 70 per cent of the total production is available for crushing. Cotton seed production during 1980-81 was around 2.6 million tonnes, an 8 per cent increase over the 1979-80 level of 2.4 million tonnes. Actual crushing of the seed stood at 1.6 million tonnes in 1980-81 which is about 14 per cent above 1979-80 level of 1.4 million tonnes. Cottonseed oil production increased to 0.20 million tonnes during 1980-81 as against 0.17 million tonnes in 1979-80. A substantial portion of the cottonseed oil is being used in the manufacture of vanaspati and the rest is marketed as refined liquid oil.

Castorseed

India is one of the major producers of castorseed, accounting for about 28 per cent of the world production. The annual production of castorseed is around 5 lakh tonnes while that of castor oil is around 1.8 lakh tonnes. Inedible castor oil has two significant potentials : (*a*) with suitable processing, castor oil can be used in the manufacture of soap to the extent of over 25 per cent, thus relieving to some extent the pressure on other edible oils ; (*b*) being used in conversion and in the lubricant industry, castor oil has a good export potential especially in view of the high price of petroleum products. During 1983-84 around 80,000 tonnes of castor oil valued at Rs. 105 crores was exported. In addition, India has been exporting annually around 20,000 tonnes of hydrogenated and dehydrated castor oils.

Linseed

Linseed is mostly used for non-edible purposes. It is a dual purpose crop yielding oil and fibre. The relative contribution of this crop to the country's total oilseed acreage and production are 11.7 per cent and 5.2 per cent respectively. The crop is grown mainly as a source of oil which is commonly used for cooking in M.P. and U.P., but a major portion is used in industries, as in manufacture of paints and varnishes.

Soyabean

Soyabean, designated as a miracle crop with over 40 per cent protein and 20 per cent oil has now been recognised all over the world as a potential supplementary source of edible oil and nutritious food. Currently the U.S.A., Brazil and China are the three big soyabean producing countries.

Soyabean is not new for India ; black soyabean is being cultivated for ages in low hills of Kumaon and Garhwal regions of U.P. as well as on the foothills of Himalayas and in some scattered pockets of central India. However, strangely enough, the crop has never been popular in the Indian sub-continent and other tropical countries. The importance of soyabean in Indian agriculture as a crop to narrow the oil and protein gap has now been generally appreciated and ambitious plans have been drawn to achieve a target of around 20 lakh hectares by the end of the Sixth Five-year plan. The increase in area of soyabean from 300 hectares in 1968 to six lakh hectares during 1980-81 speaks for itself and shows that in spite of many stumbling factors the value of soyabean in the country has been recognised, but the pace has however been slow.

Studies have indicated that the soyaflour, a by-product, can be used for fortification of wheat or other cereal flour upto 20 per cent without detectable difference from the viewpoint of taste or appearance but can considerably increase nutritional quality. Besides soyaflour is known for its value as cattlefeed in order to narrow the gap between the availability and increasing requirement of nutritious feed for livestock.

Recognising the potential of soyabean in meeting the present and future needs of the country for vegetable oil and protein rich food, the Indian Council of Agricultural Research launched a multilocational inter-disciplinary All-India coordinated research project on soya bean. There are nineteen centres of the project which represent different agro-climatic regions of the country. In addition, research on specific aspects is being independently undertaken at some other institutes/universities in the country. The headquarters of the project is located at G.B. Pant University of Agriculture and Technology, Pantnagar. Under the National Oilseeds Development project for the year 1984-85, about 17.75 lakh hectares are to be covered in the states of Madhya Pradesh, Rajasthan and Uttar Pradesh under the soyabean development programme. A National Soyabean Research Institute is also to be shortly instituted at Indore, Madhya Pradesh.

Sunflower

Sunflower is a highly cross-pollinated crop and the success of its cultivation depends upon the availability of high-yielding varieties of seeds. Sunflower cultivation came into prominence and was taken up on a large scale when the projects for extensive soyabean cultivation failed to make much headway, especially in view of the former's suitability to the tropical Indian conditions. Sunflower cultivation may also be built into the drought prone area programmes to supplement employment, as the crop does not need much rainfall. Under the National Oilseeds Development Programmes for the year 1984-85, about 4.5 lakh hectares are to be covered in the states of Maharashtra, Karnataka and Tamil Nadu.

Coconut and Oil Palm

Coconut is an important perennial oilseed and is cultivated extensively in the coastal areas, especially in South India. Kerala is the largest producer of coconuts in the country accounting for as much as 54 per cent of the total annual production of 6000 million nuts. Of late, there has been a decline in coconut production in Kerala as a result of drought and the spread of Rootwilt disease. The production of coconut oil which was around 174 thousand tonnes in 1980-81 declined to 167 thousand tonnes in 1982-83. Around 1500 crushing units are operating in the country with a total installed capacity of 1300 tonnes per 8 hours shift.

Under the Sixth Five-Year plan the production of coconut is to be increased to 6750 million nuts and the long term approach envisages the rehabilitation of existing gardens especially those affected by rootwilt disease in Kerala and senile gardens in other states to be treated with hybrid planted material. A Coconut Development Board has been set up to integrate production with improved processing and marketing facilities, thereby ensuring rapid development of the coconut industry.

Oil palm is another perennial source which yields substantial oil to bridge the gap between demand and supply in respect of edible oils. When grown under suitable conditions, oil palm gives higher output of oil per hectare than any other oilseed crop. For instance, whilst groundnut gives around 200 kg. of oil per hectare in several other countries, oil palm gives 1,800 kgs of oil per hectare in plantations in Malaysia.

The Department of Agriculture has takenup two pilot projects for raising plantations of Red oil Palm over an area of 8,400 hectares in Andaman and Nicobar islands. A public sector company, Oil Palm India Ltd. has been formed to look after oil palm development in the country. An area of 3425 hectares in Kerala and 940 hectares in Andaman and Nicobar islands have already been planted with Red Oil palm.

Unconventional Oilseeds

A significant dimension to the problem of edible oil in the country is the over-dependence on a handful of oilseeds such as groundnut, mustard, soyabean, sunflower, safflower, niger and coconut. However, India abounds in several varieties of unconventional oilseeds such as mango seed, melon seed, sal seed, rice bran, maize gram, wheat bran etc. and many of them yield potential edible oils. Therefore, systematic exploitation of these is an economic necessity and there is an urgent need for bringing these unconventional oil-bearing seeds into the fold of edible oils in order to fight the 'Vegetable Oil famine' in the Country.

Oil extracted from naturally occurring forest based oilseeds are commonly known as minor oils. Though these are not direct substitutes for major vegetable oils in India, they can go a long way in contributing to the total supply of vegetable oils, provided their collection and processing is better organised.

If the potential of these minor oilseeds is fully exploited, they could contribute around 20 lakh tonnes of oil annually and thus more than replace the quantity of edible oils presently being imported. Important minor oils presently being extracted are from salseed, mahura, neem, karanj and mango kernel. The potential of waste mango seed during every season all over the country is staggering. A beginning has been made in the development of a durable technology for processing mango-seed and its oil by Oil Technological Research Institute (OTRI) at Anantpur, Andhra Pradesh. Similarly a promising lead has been made in the development of know-how for processing of musk melon and watermelon seeds for the purpose of edible oil extraction. This is nutritionally superior to many conventional edible oils.

Recent studies have made an interesting revelation that oilobtained from chilliseed can serve as normal vegetable oil. Chilliseed oil can be obtained by dehulling the seed and pressing the resulting kernal. Chilliseed oil, it is reported, is rich in linoleic acid, generally used in the treatment of cardiac diseases. This oil can be easily refined and bleached. Raw chilliseed oil can be used in the manufacture of paints, sulphonated oils and soaps. The pressed cake, after powdering could be used in condiments. Oil for edible and non-edible purpose is also extracted from lemon grass, pine and mentha, an important ingredient for medicine preparations. Similarly wheat germ, wheat bran and maize germ also have limitless potentials.

Rice bran Oil

Rice bran is the most important source of edible oil among the unconventional sources. Rice bran is the brown coating around the white starchy rice kernel which is obtained by dehusking paddy and polishing the rice. Despite the impressive growth of rice bran technology in the country, only a third of the available potential has been exploited.

India produces about 80 million tonnes of paddy annually. This can yield about 5 million tonnes of rice bran and to the extent of 8 lakh tonnes of rice bran oil. During 1983-84, the country processed only 13 lakh tonnes of rice bran, though the installed processing capacity is around 32 lakh tonnes. Production of rice bran oil is currently estimated at about 2 lakh tonnes and hardly 10-15 per cent of it is of edible grade, although the potential availability is reckoned at about 8 lakh tonnes. The wide gap between the actual production and the potential availability of rice bran oil is primarily due to the fact that at present around 70 per cent of the paddy produced in the country is processed through huller mills while only 30 per cent is processed by modern sheller mills. It has been estimated that huller mills number about 80,000 while there are only 28,000 modern sheller mills. The conversion of huller mills into modern sheller mills has remained stagnant despite government legislation. Hence there is an urgent need for modernising rice bran processing.

While the farm production of conventional oilseeds do require greater attention than at present, the importance of unconventional sources of edible oil need not be overemphasised. A long term approach should be evolved towards effective and better utilisation of the abundant sources of unconventional edible oils and it should include the following: (i) the funding of research schemes on unconventional sources of vegetable oil should receive priority on par with the conventional oilseed, (ii) the technological aspects of oilseeds, both conventional and new, should find due importance, as farm production of oilseeds alone cannot guarantee the projected results and the nutritional and toxiological studies on various new oils is the prime need of the hour.

Government Measures

At the instance of the Government of India the National Dairy Development Board (NDDB), has undertaken the project for restructuring the pattern of production and marketing of oilseeds and edible oils. The project has been designed to integrate production, procurement, processing and marketing of oilseeds and vegetable oils through a two-tier co-operative structure—Oilseed Growers' Co-operative Societies at village level and an Oilseed Growers' Federation at the state level.

A sum of Rs. 150 crores required for project investment could come from ploughing back the sale proceeds of 2.5 lakh tonnes of edible oils gifted to the NDDB by the Co-operative League of the U.S.A. (CLUSA) and the Co-operative Union of Canada (CUC). It is sought to involve six States—Gujarat, Maharashtra, Tamil Nadu, Madhya Pradesh, Andhra Pradesh and Orissa—in implementing the project.

The first phase of the project commenced in June 1979 with a target of covering 8 project districts, each with some 2.5 lakh hectares under oilseeds cultivation. In a time span of seven years, 3,47,000 oilseed growers are expected to become members of the two-tier co-operative structure.

State federations are entrusted with the task of organising village level growers' co-operatives through mobile teams. Schemes include motivating the farmers through village level meetings, film show, visits to co-operative dairy and undertaking extension activities under the T and V system (Benor) using demonstration and seed multiplication farms.

Establishment or aquisition of large, modern and efficient processing plans is also envisaged. This would help in attaining greater economies of scale on the processing side. It has been decided to bring under the NDDB plan, about 20 lakh hectares of oilseed farms owned by about 3.5 lakh farmers by 1985-86.

The shortcomings of oilseed cultivation are manifold. They are grown at low levels of management and primarily in unirrigated lands. Poor plant protection, insufficient supply of cultural energy through nutrients and unsatisfactory post-harvest technology combine to keep the yield low and unstable. The importance of overcoming these has been recognized and four centrally sponsored schemes have been drawn up. These are: intensive oilseeds development programme; extension of oilseeds to new irrigated areas; development of soyabean and development of sunflower.

Vanaspati

Historically, the manufacture of vanaspati through the process of hydrogenation of edible oils was undertaken to meet the shortages of butter and other animal fats. However, in the Indian context, vanaspati was originally meant to be a cheaper substitute for ghee. Vanaspati production in India started in the year 1930 and the total production then was a mere 300 tonnes. Started as a minor case of import substitution, vanaspati production has gone a long way over the last 50 years.

Despite being much cheaper than ghee, the use of vanaspati was not acceptable on a large scale in the early years. But for the serious efforts on the part of the government to publicise that vanaspati (hydrogenated oil) was not injurious to health, it would not have become popular. By the Second World War, it became so popular that it was necessary to regulate the distribution of the product and for the first time it came under the regime of Government control in 1943. Though the price of vanaspati was decontrolled in 1975, informal price controls were once again reimposed in 1976, which continues till date. Esepcially during the past decade or so, the role of the vanaspati industry had undergone a striking transformation, and today vanaspati is a major supplement to edible oils, easing to some extent the recurrent shortages of the latter. It now accounts for more than 20 per cent of the total edible oil requirements of the country.

Production

There are 95 vanaspati manufacturing units in the country with a total installed capacity of 14 lakh tonnes. Vanaspati production declined marginally from a record production of 8.87 lakh tonnes in 1982 to 8.75 lakh tonnes in 1983. A further hike in the level of production is possible, as in spite of the Second output, the industry is still idling around 38 per cent of its installed capacity. However, due to the use of vegetable oils such as soyabean oil, palm oil, rapeseed oil and cottonseed oil, which have higher iodine content requiring greater hydrogenation time than groundnut oil, the effective use of the installed capacity of the vanaspati industry gets reduced by about 9 lakh tonnes. Hydrogenation of non-edible oils for industrial purposes is also partly responsible for the reduction in the effective capacity utilisation. The following table outlines the trend in vanaspati production in the country during the period 1970-83.

TABLE 7

Trends in Vanaspati Production (1970-83)

Year		Production in lakh tonnes	Percentage variation over previous year
1970	..	5.21	..
1971	..	5.90	13.2
1972	..	6.02	2.0
1973	..	4.65	—22.7
1974	..	3.54	—23.9
1975	..	4.53	28.0
1976	..	5.45	20.2
1977	..	5.79	6.3
1978	..	6.57	13.5
1979	..	6.38	—2.9
1980	..	7.06	10.6
1981	..	8.48	20.1
1982	..	8.87	4.6
1983	..	8.75	—1.3

Source : Commerce, June 1984.

On the face of it, the existing capacity of 14 lakh tonnes appears to be more than adequate to meet the demand for vanaspati. It was for this reason that in 1983 the Government decided against licensing any fresh capacity in the vanaspati industry. Of the existing 95 units in the industry, as many as 32 have installed capacity of less than 25 tonnes a day (or 9,000 tonnes per annum), which is generally regarded as below the minimum economic size, as such the production of such units should be permitted to expand to an economically viable size.

Vanaspati is only a processed edible oil. Therefore, it cannot be considered distinct from the edible oil. In order to reserve traditional oils for direct consumption, the vanaspati industry is compelled to depend upon imported oils for an overwhelming proportion of its edible oil requirement. More than half of the total quantity of one million tonnes of edible oils that is imported goes for the manufacture of vanaspati. The industry receives 60 per cent of its requirement from the imported oil at Rs. 8,500 per tonne and another 15 per cent at Rs. 12,000 per tonne. The rest it has to buy in the domestic market with the exception of groundnut oil.

Even as late as in 1970-71, the industry was using domestic groundnut oil and other oils of upto 85 per cent of its requirement. However, from the mid-seventies the share of the domestic oil in the manufacture of vanaspati came down drastically with corresponding increase in the usage of imported edible oils. In 1980-81, the share of the imported oil was 87 per cent and in 1981-82, it was around 70 per cent. During 1982-83, the imported oil consumption remained above 60 per cent at around 6 lakh tonnes. The distribution of the imported edible oil to vanaspati production and public distribution system in recent years is outlined in the following table.

TABLE 8

The Distribution of Imported Edible Oil

Year		Vanaspati Industry	Public Distribution System
		(in lakh tonnes)	
1978-79	..	4.50	0.90
1979-80	..	6.04	3.49
1980-81	..	6.41	4.15
1981-82	..	5.73	4.34
1982-83	..	6.00	5.36

The use of domestic groundnut oil in vanaspati production was banned in 1977 while mustard oil has been permitted only occasionally cin the past, when groundnut crop had failed. The industry mainly buys oil processed from minor oilseeds such as cottonseed, rice bran, soyabean, sunflower, mahura etc. As such, the vanaspati manufacturer currently has to use a wide variety of oils, often of poor quality, imported or indigenous minor oils. This has naturally affected the quality of vanaspati in respect of colour, plasticity and homogenity.

The total ban on import of tallow as a result of the tallow controversy in 1983, has also aggrevated the situation by creating a significant demand pull from the industrial user sectors such as soaps and chemicals, on the limited availability of domestic edible oil for vanaspati industry. Moreover, the industrial user sector is not fettered by price or oil usage controls and as such has the capacity to outprice the vanaspati industry. It will be in the national interest if some quantities of oils which are being allowed to be wasted are recovered from oil cake and the total availability pool thus augumented could offset the above adverse factors. While, on the one hand, large quantities of oil cakes with 7 per cent oil content are fed as such to the cattle, on the other hand, most of the solvent extraction units are lying idle. Edible grade solvent extracted groundnut, mustard cannot be used for edible purposes without proper refining. If vanaspati industry could be permitted to use these solvent extracted oils, it will most certainly give fillip to the activity and raise the production of edible oils by 1.5 lakh tonnes annually, and this would enable the country to save around Rs. 150 crores per annum in foreign exchange. The other factor that should be kept in mind is the possibility of importing oilseeds in place of edible oils, as by doing so not only will it minimise the outgo of foreign exchange to some extent, but more important the idle processing capacity for paucity of oilseeds can be bridged to a great extent.

In order to encourage the use of indigenous oil in the production of vanaspati, the government extended the excise duty rebate of Rs. 300 per tonne on the Vanaspati made solely from indigenous rice bran oil, upto the end of 1984. It is imperative that the government raise this rebate forthwith so as to encourage the use of indigenous rice bran oil. Besides other irritants such as pricing of Vanaspati, packing etc., also need to be sorted out in order to put the vanaspati industry on a better footing.

The sorry state of affairs prevailing in the oilseeds production stems from inadequate attention, faulty planning, misplaced priorities and the absence of a suitable technology. If the country is to achieve self-sufficiency in oilseed production, outlays on research and development will have to be increased considerably and the farmers assured of remunerative price particularly when they take up new oilseed crops in traditional areas.

For the smooth development of vanaspati and edible oil industries, only a concerted effort to find a breakthrough in the oilseeds production will really help. Here the efforts of the vanaspati manufacturers associations' 'Oilseed Research and Development Institute' should be commended. It has helped the farmers to procure advanced variety of seeds so as to improve the yields. Another noteworthy instance is the popularisation of Pusabold mustard variety developed by Indian Agricultural and Research Institute, which was tested on a large scale in Saurashtra, Gujarat. The results have been encouraging with yields going up by about four times. Only when these experimental cultivations are carried out as a first priority and on a national level, the vanaspati industry and the total vegetable oil economy can hope to break the present production barriers and take off to a stage of sustained growth and self-sufficiency.

AMRIT BANASPATI CO. LTD.

INCORPORATED in 1940 at GHAZIABAD. **Directors :** Tulsi Prasad Khaitan (*Chairman & Managing Director*), Hans Raj Gupta, Debi Prasad Kanudia, Atam Parkash, Ashok Kumar Sen, Somesh Chand Trikha, Tapendra Mohan Sen, Raghubir Chand Soni, M. K. Venkatachalam (*Nomimee* of IFCI), Ganesan Chidamber (*Nominee* of LIC), Naresh Kumar Bajaj (*Jt. Managing Director*) and Jagesh Kumar Khaitan (*Jt. Managing Director*). **Secretary :** R. M. Sharma. **Registered Office :** G. T. Road, Ghaziabad. Telegrams : 'AMRIT'. Telephones : 2321 & 2323. **Auditors :** Messrs. V. Sahai & Co.

Objects and Activities : Manufacture of vegetable products including margarine, refined oil, paper and wrapper, containers, soap etc. Messrs. Amrit International Ltd. is a subsidiary company.

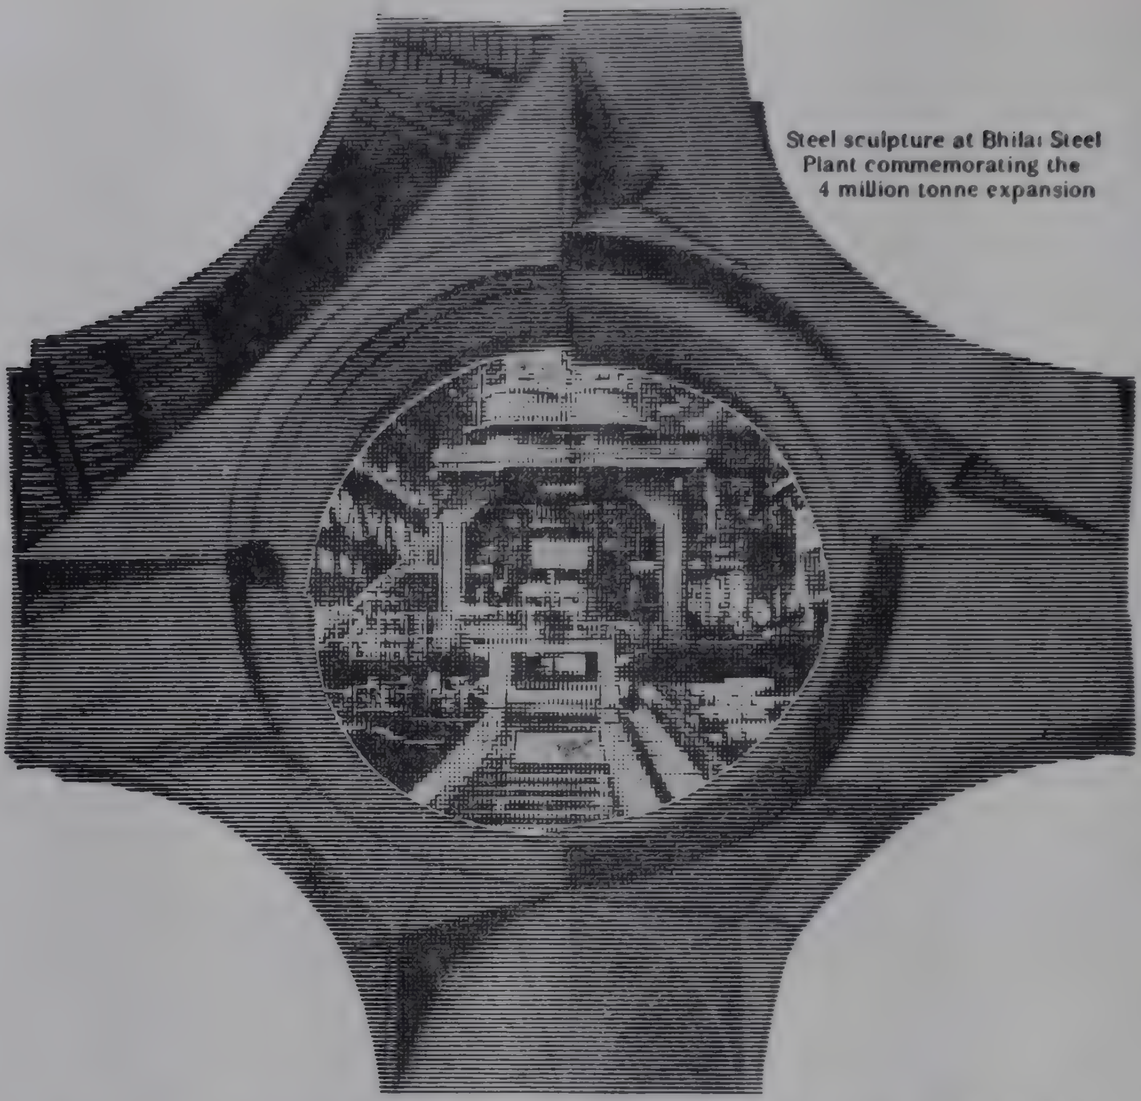
SUPPLEMENT



Steel sculpture at Bhilai Steel Plant commemorating the 4 million tonne expansion

Forward to four million

Ten years ago Bhilai Steel Plant completed a cumulative production of 25 million tonnes and had already embarked upon a significant new journey towards an annual capacity of 4 million tonnes.

Today the milestone is in sight. The 4 million tonne expansion will mean an astounding 60% capacity rise Envisaging the latest in steel technology: a top blown oxygen converter; a continuous casting shop with a capacity of 1.18 million tonnes of slabs and 245,000 tonnes of blooms; and a 3600 mm heavy plate mill—all on hot trial now.

And the horizons get wider. Today the steel sculpture at Bhilai is a proud testimony of human achievement and future promise, as Bhilai spurs forward to new targets and new frontiers.

GLOSSARY OF TERMS USED

1. *Gross Fixed Assets :* Gross figure as shown in the Fixed Assets schedule, excluding Capital Work-in-Progress.
2. *Depreciation Reserves :* Figures given in the Fixed Assets schedule.
3. *Net Fixed Assets :* The balance after deduction of depreciation reserves plus the capital work in progress, machinery under erection, assets in transit and any capital expenditure pending allocation.
4. *Investments :* Figures as per Balance Sheet.
5. *Cash :* Cash in hand, Cash at Bank and Deposits in Bank.
6. *Receivables :* Sundry Debtors as per schedule.
7. *Inventories :* Includes stock of raw material components, finished goods, loose tools, goods in transit, stores, goods in process and other items that are generally listed under inventories.
8. *Other Current Assets & Loans and Advances :* Include loans and advances as per schedule plus interest receivable, dividend receivable, and other receivables not included in the schedule.
9. *Total Current Assets :* The total of Cash, Receivables, Inventories, and Other Current Assets, Loans and Advances.
10. *Total Assets :* Assets side of Balance Sheet minus Miscellaneous Expenses/Losses.
11. *Preference Capital :* Figures as per Balance Sheet.
12. *Equity Capital :* Figures as per Balance Sheet.
13. *Reserves and Surplus :* Figures given in the schedule plus capital suspense and other such items, if any.
14. *Expenditure and Losses not written off :* Includes items listed under the heading ' Miscellaneous Expenditure ' on the asset side of Balance Sheet.
15. *Net Worth :* The total of Preference and Equity Capital and Reserves and Surplus minus Expenditure and Losses not written off.
16. *Secured Loans :* As listed in the Balance Sheet.
17. *Fixed Deposits :* The figures given as Fixed Deposits under Unsecured Loans.
18. *Unsecured Loans :* Loans other than Fixed Deposits plus deferred payments credits.
19. *Total Debt :* The total of Secured Loans, Unsecured Loans and Fixed Deposits.
20. *Current Liabilities :* Figures as per Balance Sheet plus provisions made for gratuity, compensation and other provisions except provision for taxation and dividends.
21. *Income Taxes and Dividends :* As per Current Liabilities and Provisions schedule.
22. *Total Current Liabilities :* The total of Bank Overdrafts and Loans, Current Liabilities, Income Taxes, Dividends and Share Application money.
23. *Total Liabilities and Net Worth :* The total of Net Worth, Total Debt and Total Current Liabilities as per definitions above.

GUIDELINES FOR ANALYSIS OF WORKING

I. PROFIT & LOSS ACCOUNT

1. *Sales :* Include sale of finished goods, processing charges and service charges.
   Revenue : Includes interest, dividends, rent and such other items identified as income.

2. *Gross Profit/Loss :* The Profit/Loss before providing for depreciation, taxes and transfer to reserves.

3. *Depreciation :* Figures as per Profit and Loss account.

4. *Taxes :* The provision made for the year in Profit and Loss Account.

5. *Net Profit/Loss :* The Gross Profit/Loss minus depreciation and provision for taxation.

6. *Dividends :* The dividends paid for the year whether in the same year or in subsequent years.

II. RATIO ANALYSIS (All figures as per the analysis of Balance Sheet)

1. Debt Equity : $\dfrac{\text{Total debt}}{\text{Net worth}}$

2. Current Ratio : $\dfrac{\text{Current assets including loans and advances}}{\text{Current liabilities including provisions}}$

3. Net Worth per Equity : $\dfrac{\text{Net Worth—Preference share capital — Capital suspense—Share capital pending allotment}}{\text{Number of equity shares}}$

4. Net Profit/Total Assets % : $\dfrac{\text{Net Profit}}{\text{Total Assets}} \times 100$

5. Net Profit/Sales % : $\dfrac{\text{Net Profit}}{\text{Sales}} \times 100$

6. Receivable to Sales—days : $\dfrac{\text{Receivables} \times 365}{\text{Sales}}$

7. Inventories to Sales—days : $\dfrac{\text{Finished goods} \times 365}{\text{Sales}}$

II. FUNDS FLOW ANALYSIS (All figures as per the analysis of Balance Sheet)

(a) Source side

(1) *Internal generation :*

Indicates the profit after taxes plus depreciation. The profit calculated as above has been further adjusted towards previous year's additions or deductions in the Profit and Loss Account/Appropriation Account. Any flow of funds from or to the Profit and Loss account out of the reserves has been ignored.

(2) *Increase or decrease in borrowings :*

The net increase or decrease in borrowings compared to the previous year has been shown in the appropriate column in the source side or the application side.

(3) *Increase or decerase in reserves :*

(i) The net increase or decrease in reserves as shown in the schedule has been taken.

(ii) Any trading loss has been shown as a decrease in reserves even if no reserve figures is shown in Balance Sheet.

(iii) Share issue and other such expenses incurred during the year have also been shown as a decrease in reserve.

(iv) Any flow of fund from or to the reserve out of profit and Loss account has been ignored.

(4) *Working Capital :*

The difference in working capital i.e. Current Assets, Loans and Advances minus Current Liabilities and Provisions has been shown in the appropriate side.

(5) *Decrease in other non-current assets :*

Decrease in items shown under miscellaneous expenditure in the asset side except the decrease in Profit and Loss account balance.

(6) *Investments :*

The decrease or increase over last year's Investments has been shown.

(7) *Share Capital* (Equity + Preference capital) :

(i) Any increase by fresh issue has been shown in the source side.

(ii) Any increase due to bonus issue has been shown in the source side and also as decrease in reserves in the application side.

(b) Application side

(1) *Capital Expenditure :*

The Net Fixed Assets plus Depreciation provided for the year minus the Net Fixed Assets of previous year.

(2) *Dividends :*

Proposed Dividends plus Dividends paid for earlier years either out of reserves or out of profits.

(3) *Reduction in Capital :*

Any redemption of shares is shown as ' Redemption of Preference Share Capital '.

TATA ELECTRIC COMPANIES

Registered Office:

Bombay House, Homi Mody Street, Bombay-400 023.

The leader in Power Control and Protection Systems

English Electric are pioneers in the manufacture of HRC Fuselinks, Protective and Auxiliary Relays. Today with the widest range of relays – Static, Electromechanical and Micro-processor based – English Electric are leaders in the field.

English Electric also manufacture Power and Motor Control Centres incorporating air circuit breakers and fuse switches to the latest design. MCCBs introduced recently have the unique static trip release.

English Electric are the largest manufacturers of Control and Relay Panels for systems upto 400 kV and generators upto 500 MW. Their expertise on systems and protection has been in the service of power industry for decades. Electronic test and measuring instruments complement their product range.

The Erection & Projects Division of English Electric are serving the power sector of the country by undertaking turnkey contracts for industrial electrification, installation of switchyards and substations, erection, commissioning, repairs and overhauling of steam/hydro turbine and diesel generating sets.

Yes, English Electric have come a long way from pioneering HRC Fuselinks ... and they have emerged leaders in power control and protection systems.
